December \_\_, 1993

Dear Ms. Richards:

As required by the Cranston-Gonzalez National Affordable Housing Act, I hereby submit the original and two copies, including all attachments and certifications of the Comprehensive Housing Affordability Strategy (CHAS) for the State of Montana by the Department of Commerce.

Please direct any questions or comments on the CHAS document to Newell B. Anderson, Administrator, Local Government Assistance Division.

Sincerely,

Jon D. Noel  
Director

# THE MONTANA CHAS FOR FISCAL YEARS 1994 - 1998

## EXECUTIVE SUMMARY

In response to the 1990 Cranston-Gonzalez National Affordable Housing Act, Montana began the formulation of a statewide housing assistance strategy. The federal fiscal year 1994 CHAS is intended to outline Montana's plans for the use of affordable and supportive housing program funds anticipated during the next five years. The FY 1994 CHAS has been developed through the cooperation of State and local government organizations, housing-related nonprofit organizations, concerned citizens, contributions from the real estate, lenders, residential development communities, and randomly surveyed Montana citizens.

The results of all needs assessments have determined that Montana's communities face housing problems as diverse as the State's geography. On one hand, the combination of population migration, economic restructuring, and falling real wage rates have had adverse affects on Montana's economic well-being and the provision of affordable housing. On the other hand, in many areas of the State, the cost of housing has risen dramatically and affordable housing for very low-income, low-income, and moderate-income Montanans has become virtually non-existent since the 1990 Census was taken. In other parts of the State, a lack of maintenance because of low rents or incomes is causing a decline in the suitability of the housing stock. No single approach, or housing priority, fits all regions of the State equally well. Acceptably addressing the range of severe needs, while allocating resources equitably, may ten to make for a complicated housing policy agenda. Affordable housing deficiencies, whether particular to a specific community or spread statewide include:

- An overall shortage of available housing stock;
- Shortage of assisted rental units;
- Shortage of available capital to build an adequate number of affordable housing units;
- Inability of low- and moderate-income households to afford to buy homes;
- Limited resources to finance housing maintenance and improvements;
- Complex and under funded housing assistance programs;
- Fair housing non-compliance;
- Inadequate resources to meet the needs of persons requiring supportive and transitional services in achieving permanent housing;
- High prospective risks of lead-based paint hazards in low-income households;
- A propensity for overcrowding in low-income, large family households, especially rental households; and,
- Restrictive conditions placed on some forms of affordable housing, thereby limiting its provision.

Montana believes these problems can be reduced, or perhaps eliminated, through the following actions:

- Constructing more low-rent units;
- Constructing more affordable single-family homes;
- Rehabilitating existing low-rent units;
- Rehabilitating existing single-family units;
- Developing more affordable home ownership opportunities;
- Providing repair and maintenance assistance;
- Providing advice and assistance for manufactured and mobile home owners;
- Providing assistance for single-parent families and families with other supportive needs;
- Developing more low-rent congregate care facilities for elderly Montanans;

- Providing more housing for disabled persons and persons requiring supportive services; and
- Developing more shelters and services for homeless and runaway youth.

The State has organized these actions into four broad housing policy objectives in its CHAS: enhancing availability, promoting affordability, securing suitability, and enhancing accessibility of the housing stock. These broad policy objectives translate into a set of desired strategic actions. There are:

- Relieve the shortage of available housing stock;
- Increase the stock of rental units, especially assisted units;
- Promote capital formation to build an adequate number of affordable housing units;
- Increase the ability of low- and moderate-income households to buy homes;
- Increase resources to finance housing maintenance and improvements;
- Better define and explain housing assistance programs;
- Work to ensure fair housing compliance;
- Assist in securing adequate resources to meet the needs of persons requiring supportive and transitional services in achieving permanent housing;
- Assist in securing adequate resources to meet needs for supportive services for the homeless;
- Assist in securing additional funding and resources to increase capacity and counseling service for runaway youth;
- Increase accessibility of Montana's housing stock; and
- Increase energy efficiency of Montana's low-income housing stock.

Additional goals for the next five years are anticipated:

- Support housing market intervention to increase provision of affordable housing;
- Increase the supply of affordable rental units and for-purchase homes;
- Establish a State loan program to aid local governments in meeting federal match requirements;
- Apply for HOME reallocation funds;
- Develop an integrated tracking system to facilitate monitoring of projects and assisted persons; and,
- Evaluate affects of Federal Policies on the provision of affordable housing and rural development.

With these aims in mind, the following programs give purpose to the CHAS five year plan:

- HOME Program
- Community Development Block Grant Program
- Montana Board of Housing Programs (elderly, single-family, multifamily, and manufactured homes)
- Emergency Shelter Grant Program
- U.S. Department of Energy Programs (e.g., LIEAP, weatherization)
- HOPE 1, 2, and 3
- HOPE for Youth (Youthbuild)
- Low Income Housing Preservation Program
- Shelter Plus Care
- Supportive Housing for the Elderly (Section 202)
- Supportive Housing for Persons with Disabilities (Section 811)
- Safe Havens Demonstration Program (for Homeless Individuals)
- Supportive Housing Program
- Moderate Rehabilitation Single Room Occupancy Program
- Housing Opportunities for Persons with AIDS
- Rural Homeless Grant Program

MDOC realizes that significant effort must be made to turn the tide of increasing housing difficulties; specific actions must take place. For the upcoming year, these are planned to be:

- Promote the single-source information clearinghouse for housing and related services;
- Explore alternative ways in which local governments can promote affordable housing;
- Continue expanding MDOC's role in the provision of technical assistance;
- Promote and distribute information about the Community Reinvestment Act;
- Analyze the survey of randomly drawn citizens to more completely portray opinions of Montana citizens relating to current housing conditions;
- Prepare economic and demographic data book for program applicants;
- Analyze household survey data to assist in determining regional housing strategies for CDBG development activities and distribute findings;
- Contact all known transitional, emergency, and other temporary housing facilities for additional information;
- Develop *Model Subdivision Regulations* document;
- Assist in securing more stable funding sources for Montana's existing homeless facilities and services;
- Analyze SRS homelessness data set for further specification of data related to homelessness;
- Support Governor's task force charged with researching Montana's housing situation;
- Track impact of lowered Section 8 Fair Market Rents rental assistance on homelessness;
- Evaluate affects of Federal Policies on provision of affordable housing and rural development;
- Leverage federal dollars to attract private investment money;
- Continue supporting grant and loan applications of other entities seeking housing assistance and expanding the supply of housing; and,
- Continue promoting and assisting nonprofit entities in receiving CHDO certification.

All programs, resources, and proposed activities will be distributed equitably throughout the State, to the extent possible and applicable, and according to competitive (or formula) guidelines set forth by local, State, and federal agencies.

In addition to developing the five year plan, the CHAS Five Year Strategy and Annual Plan is designed to meet other requirements set forth by HUD and the 1990 Cranston-Gonzalez National Affordable Housing Act. This document will be used by Federal agencies to make appropriation decisions regarding housing and related services that affect resources made available to Montana. Its importance can not be underestimated. In requiring the CHAS, HUD has provided very specific guidelines regarding its format, organization, and content. In fully complying with these guidelines, some of the latter sections have redundant narratives. Therefore, depending upon information needs, the reader may wish to consult only certain portions of the CHAS. For this reason, the following succinctly summarizes the content of each major part of the CHAS Five Year Plan.

## INTRODUCTION:

**CHAS Development Process** -- In the opening portion of the CHAS, the process by which the CHAS was developed is highlighted, identifying significant features of the process, groups, and activities undertaken to assure citizen involvement.

## SECTION I:

**State Profile** -- This includes an overall description of the State, market and inventory conditions for housing, an assessment of housing needs, current estimates of needs for affordable housing, and resources available to address the needs. The assessment is broken down into racial/ethnic, low income, nature and extent of homelessness, sheltered and unsheltered, and the supportive housing needs of non-homeless groups. As well, five-year economic, demographic, and household projections are offered along with longer term statements of housing need.

## SECTION II:

**Five-Year Strategy** -- In this section, and associated with market and inventory conditions arising from future socio-economic conditions, five-year goals are presented within a priority ranking with an analysis and strategy development. It discusses public policies which may affect the provision of affordable housing and projected efforts to ameliorate any negative effects. The structure for program delivery and intergovernmental cooperation are discussed along with gaps in both. Use of Low Income Housing Tax Credit (LIHTC) funds and public housing resident initiatives are each presented. The narrative presents the State's activities related to lead-based paint hazard evaluation and reduction.

## SECTION III:

**Annual Plan** -- The annual plan considers several specific actions which will be taken in the next fiscal year to reach toward goals outlined in the five-year strategy. It adds specific actions to the general plans outlined in the five year plan. In addition, the State specifies a statewide anti-poverty strategy.

At the end of the annual plan are a summary of citizen comments and the certifications that the State will affirmatively further fair housing and that it is following a residential antidisplacement and relocation assistance plan, as per HUD's requirements.

## APPENDICES:

**Glossary** -- A glossary of terms used in the CHAS to help the reader better understand the contents of the CHAS.

**Appendix A** -- Copies of survey instruments and follow-up letters.

**Appendix B** -- NPA Economic and Demographic Forecast Documentation

**List of References**

## INTRODUCTION

Decent and affordable housing is an essential element to the quality of American life. The federal government has played a large role in addressing housing issues ever since the time of the New Deal, when housing was defined as a part of the nation's policy agenda. A number of public programs were created which were intended to serve the housing needs of the poor, elderly, and others for whom affordable and decent housing was unattainable. Since the first public housing programs were initiated in 1934, housing has been central to the nation's sense of well-being.

As the U.S. entered the 1980s, the federal commitment to housing fell significantly, plunging from \$26.7 billion to less than \$10 billion between 1980 and 1986. At the same time, the cost of housing rose faster than most people's ability to pay for it. This resulted in a sizable gap between the provision of and demand for affordable housing. These needs were addressed when, on November 28, 1990, President George Bush signed into law the Cranston-Gonzalez National Affordable Housing Act.<sup>1</sup>

As the country moves through the 1990s, the nature of federal housing policy now being implemented reflects dual purposes: to provide decent and affordable housing and to emphasize the importance of states in policy formation. Funding directed toward housing has risen in response to the act, increasing almost to the 1980 level. The National Affordable Housing Act formally augments the role of states and entitlement areas in addressing housing issues by requiring them to develop five-year comprehensive planning strategies from which policy and appropriation decisions can be made.

This document, the Montana FY 1994 Five Year Comprehensive Housing Affordability Strategy (CHAS), is submitted to the U.S. Department of Housing and Urban Development (HUD). It is designed to fulfill that requirement. The Montana CHAS follows the explicit reporting instructions and organizational guidelines set forth by HUD.

## SUMMARY OF MONTANA'S HOUSING DIFFICULTIES

The lack of affordable housing for very low-, low-, and moderate-income persons has risen in prominence as a national policy issue. Across the nation, it has affected individuals, families, and the elderly, whether homeowners or renters. According to a 1986 report prepared by the National Governor's Association, housing costs are rising faster than income.<sup>2</sup>

Montana has not escaped the influences of the nation's housing problems. An analysis of the number of low-rent units, low-cost homes, and the number of households earning less than

---

<sup>1</sup> The Act does not currently include Section 8 except for the Single Room Occupancy Program, nor does it include the Farmer's Home programs in its CHAS process. Montana's Indian reservations are not addressed within the state's guidelines issued by HUD.

<sup>2</sup> *Decent and Affordable Housing for All: A Challenge to the States*. National Governor's Association, 1986.

\$15,000 per year indicates that there may have been a shortage of as many as 25,000 units of affordable housing to those households in 1990. This particularly affects families, who make up almost 70 percent of Montana's households. Today, the situation is much worse, as pressures and constraints on the housing market have spread to affect Montanans of all income categories.

These shortages have driven monthly rental payments and housing costs up sharply in the last few years. This makes many people at potential risk of homelessness and places home ownership out of reach for many low- and moderate-income Montanans. Even though there is great demand for low-cost housing, there has been little new construction of single-family or multifamily units for low- and moderate-income Montanans.

Rehabilitation of the existing housing stock is a pressing issue for Montana. Many occupied units across the State are in poor condition because their owners cannot afford maintenance costs. Elderly Montanans, who constitute the largest group of homeowners in the State, often lack the resources necessary to maintain their homes. For potential homebuyers, units which stand vacant for long periods of time constitute a different rehabilitation problem. Often the cost of bringing the units up to a liveable standard is prohibitive. The poor condition of the units can also preclude the use of mortgage insurance programs, without which the units are not easily financed.

There is also a need for modification of existing units. Modification of units is required to make housing accessible to Montana's physically disabled population, some of whom currently live in units which are not adequately equipped. In addition, energy inefficient units are placing an unnecessary cost burden on Montana's renters and homeowners. Energy efficiency modifications are needed to address the overall issue of affordable housing across the State.

A number of groups in Montana have special needs linked to the provision of affordable housing. For homeless people, the disabled, families headed by single parents, and the elderly, there is a need for supportive services which facilitate independence. Homeless young people in Montana, while not as prevalent as in other states, are finding fewer available units in some local shelters. These facilities are simply not able to meet the need for emergency and transitional housing.

Single parents head 17 percent of Montana's families. Where there is a high rate of single-parent families in public housing facilities (a situation more common to Montana's major cities) the provision of day care and job training services is needed both to facilitate the family's move toward self-sufficiency and maintain a stable public living environment.

The elderly make up more than 17.5 percent of Montana's adult population and represent the largest group of homeowners in the State. Congregate care housing for this group, which fosters independent living while providing supportive services, is becoming a compelling need for the future.

There were more than 50,000 mobile homes in Montana in 1990. Whereas manufactured and mobile homes represent an affordable housing alternative for many Montanans, such owners tend to face restrictive or discriminatory zoning laws or practices in many areas. The challenge to policy makers in Montana is to identify and press for equitable alternatives to current zoning and land-use conditions for low- and moderate-income Montanans.

Montana's economy has suffered along with the national recession. Industrial activities related to the State's resource base declined, particularly in lumber and wood products. Structural changes in the State's economy have compounded the problem. Many of these economic difficulties will continue. Without proper intervention by housing specialists, the lack of available, affordable, and suitable housing may persist.

Montana's limited resources are not adequate to address *all* the housing requirements of low- and moderate-income households, elderly Montanans, people with special needs, and other in-need populations. The Montana Department of Commerce (MDOC) and the people of the State share in the task of exploring creative approaches to expanding the supply of housing across the State. Together, through the stewardship of MDOC, Montana intends to move forward in securing and applying federal, state, and private resources to solve the State's housing problems.

## **THE CHAS DEVELOPMENT PROCESS**

The development of comprehensive strategies for housing in Montana is a process that continued throughout the fiscal year, spanning a variety of settings. Through this process, the State has attempted to enhance the prospects for delivering benefits to the people of the State, and to improve the formation of policies and programs that support the availability and delivery of affordable housing. The CHAS development process has several distinct steps. These were:

1. Delivery of new program services;
2. Interagency cooperation and coordination;
3. Consultation with concerned citizens and organizations;
4. Advisory and policy formation functions; and
5. Heightened public awareness of the citizen involvement process.

### **1) DELIVERY OF NEW PROGRAM SERVICES**

MDOC completed the first application cycle for the HOME Program in FY 1993. The design, development, and implementation of the program spanned many months and included citizen involvement in many areas of the State. Nine cities were visited during September and October 1992. For this part of the application and training process, the cities and towns solicited for input were Havre, Glasgow, Miles City, Billings, Helena, Kalispell, Missoula, Butte, and Great Falls. All meetings were advertized in printed media prior to opening of the process. MDOC followed these with application workshops in Missoula, Bozeman, Lewistown, and Billings. Closing of the first competitive bid application process occurred on February 16,

1993. A total of 25 applications were received during the first grant competition, totaling \$6.96 million in funds. With the \$3,981,000 available for FFY92, MDOC awarded grants to fourteen applicants. Three of the successful candidates were Community Housing Development Organizations (CHDOs).

## **2) INTERAGENCY COOPERATION AND COORDINATION**

Implementing the application process for the HOME Program was not the sole component of the CHAS development process. MDOC continues to have other institutional concerns, such as the integration and coordination of its programs with other means to provide affordable housing. For example, many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the Federal Community Reinvestment Act (CRA). The Census and Economic Information Center, within MDOC, has been responding to many requests throughout the year for information pertinent to the CRA program. Some financial institutions have implemented programs in response to the Community Reinvestment Act, through the cooperation of MDOC.

Another federally assisted program is the Montana CDBG Program, a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purposed local governments. All projects must principally benefit low and moderate income persons. The basic categories for local community development projects are: housing, public facilities, and economic development. Housing projects may involve rehabilitation of homes owned or rented by low- or moderate-income families, as well as activities that improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds play a key role in leveraging - - using government dollars to attract private dollars. This creates a pool of funds for rehabilitation loans at below market interest rates.

MDOC has also been communicating and coordinating activities with other agencies through the entire year. This assists in the identification of areas for which further communication and cooperation may be needed and helps to identify gaps in the institutional provision of services. Activities have included application workshops for CDBG funding, information dissemination regarding the Community Reinvestment Act, advice to nonprofit agencies and prospective nonprofit entities on how to become certified as a Community Housing Development Organization (CHDO) and support for other entities in their application processes for funding of various programs.

## **3) CONSULTATION WITH CONCERNED CITIZENS AND ORGANIZATIONS**

As part of the development of the FY94 CHAS, a specific set of actions was taken to collect statewide opinions from a broader base of concerned citizens and organizations and expand upon the time citizens can provide input on the degree of Montana's housing need. The objectives were to identify how needs have changed over the last year, to develop new solutions

or policies that may be appropriate, solicit other ideas on how to improve Montana's housing situation, and to collect facility inventory data.

Public needs were reviewed in early September, during the CHAS Public Hearing on Statewide Housing Need. MDOC received comment from concerned citizens and organizations regarding the provision of affordable housing and related housing services. In particular, there were expressed interests for more rental housing, more opportunities for home ownership, and other needed financial mechanisms to buy and sell mobile homes, as existing financial institutions are reluctant to do anything for this type of structure. Too, technical assistance was noted as a critical need in sparsely populated areas of the State; it is much more unusual to afford the proper set of grant writing talents locally. As well, public comment was received regarding facilities for the homeless. Many homeless families are reluctant to be served with single homeless persons and most facilities are set up to assist individuals. Lastly, there were expressed housing service needs for the mentally ill population.

In another approach to collecting citizen input, four hundred individuals who had received the CHAS last year were mailed a survey, a 50 percent sample of the total mailing. Prospective respondents were asked to discuss housing conditions, cost, demand, supply, available inventory, and other parameters describing the stock of dwelling units in their respective areas. This provided excellent opportunities for individuals to more fully articulate problems as well as specify certain degrees of need in their own locale. These responses are summarized and included within the CHAS document (Section I.B - Needs Assessment); a copy of the instrument, cover letters and follow-up letters are included herein as Appendix A.

In a third approach, a housing opinion survey was conducted by the Community Development Bureau. In it, nearly 320 housing officials throughout the State were contacted. They were asked to discuss what factors foster, or can foster, affordable housing and what factors act as barriers to affordable housing. The survey was intended to help determine what solutions can be implemented to remove barriers to affordable housing. Another thrust of the survey was devoted to considering whether zoning and land use laws interrupt the provision of affordable housing and, if so, whether they represented barriers to affordable housing. Comments from this instrument are also included.

In addition to selecting sets of housing specialists throughout the State, several other agencies, entities, and parties were contacted and invited to provide input to the housing strategy development process. The Governor's Office on Aging was contacted regarding the housing needs of the elderly in Montana and provided the Statewide Aging Plan and "Aging in Montana," a study of the self-identified needs of older Montanans. Summaries of these are included herewith. While the relevant legislation, the Older American Act, does not specifically address housing; it does include services such as meals. Furthermore, assisting the elderly with housing is listed as an objective in the State plan and in Montana's Older Americans Act (1987).

The Developmental Disabilities Division of SRS was consulted for information regarding the housing needs of persons with developmental disabilities. They were able to provide

estimates of the number of developmentally disabled citizens in some need of supportive housing. For the physically disabled, the Montana Independent Living Center and the Rural Institute on Disabilities were contacted for their estimates.

The Preventive Health Services Bureau was also consulted. Here, the Bureau provided a status report on the Montana Childhood Lead Poisoning Prevention Program, which includes the plan for medical case management of lead poisoned children. The Department of Health's STD/AIDS division assisted in ascertaining the prevalence of AIDS in the population and the survival rate. The Department of Corrections and Human Services' Mental Health Division was consulted for an assessment of the housing needs of the mentally ill in Montana. Much of the detail available was found in the 1991-94 Statewide Mental Health Plan, provided by the Mental Health Division.

The needs of homeless people were studied over this past fiscal year by the Department of Social and Rehabilitative Services (SRS). SRS provided the results of a research project they sponsored. *The Sheltered Homeless in Montana*, May 1993, details the service and housing needs expressed by homeless people and by shelter directors.

#### 4) ADVISORY AND POLICY FORMATION FUNCTIONS

Throughout the year, MDOC has interacted with other agencies and organizations, in keeping with both CHAS commitments and the desire to facilitate the development of refined and needed strategies. MDOC has maintained its commitment to informing others of responsibilities to the CHAS process, and in enhancing the ability of others to promote housing in their local communities. MDOC sought, and received, broad-based support for a "team" approach, and founded the CHAS Steering Committee. The Steering Committee is composed of State and local government housing officials, advocacy groups, and interested citizens. This entity, given the mandate to recommend policy and actions, was active throughout the CHAS development process. Exhibit 1, below, presents the members of the FY94 CHAS Steering Committee.

In particular, MDOC continues to be instrumental in advising existing and potential nonprofit entities on ways to form Community Housing Development Organizations that can be subsequently certified by MDOC. Only local units of government (i.e., cities, towns, and counties) and CHDO's are eligible to apply for HOME grant funds and an MDOC-certified organization can apply for HUD CHDO set-aside funds under the HOME Program. During the past Fiscal Year MDOC certified eleven nonprofit organizations as CHDOs. These organizations are:

- Action for Eastern Montana, Glendive
- District VI Human Resources Development Council, Lewistown
- District VII Human Resources Development Council, Billings
- District IX Human Resources Development Council, Bozeman
- District XI Human Resources Development Council, Missoula
- District XII Human Resources Development Council, Butte
- Montana People's Action, Billings
- Montana People's Action, Missoula
- Neighborhood Housing Services, Inc. Great Falls
- Northwest Montana Human Resources, Inc., Kalispell
- Opportunities, Inc., Great Falls

#### 5) HEIGHTENED PUBLIC AWARENESS OF THE CITIZEN INVOLVEMENT PROCESS

Two significant actions were taken to promote awareness of the planning portions of the CHAS development process. One was to implement a survey of randomly selected Montana citizens; the second was to schedule public review meetings throughout the State in the evenings, so that additional citizens, whose primary responsibility may not relate to the promotion of housing or residential development, may attend and provide comment to the policy planning process.

For the former, close to four thousand individuals were selected at random from Montana Motor Vehicles Division vehicle registration records and sent a similar, but less detailed, survey

instrument than that submitted to the FY93 CHAS distribution list.<sup>3</sup> This latter data provides unfettered perspective on the degree of need for affordable housing, housing preference, and preferred program solutions. Additional data was asked about the individual's household and dwelling to ascertain attribute data. This large data set will provide a wealth of information as it becomes more widely tapped. It will also provide additional insight into the condition of housing and represents an excellent data base of the States housing conditions. Further analysis of this data is anticipated in future CHAS development processes.

In addition to these efforts, MDOC advertized the four statewide CHAS meetings during the months of October and November, noting the dates and times of these meetings. The public review period extended from October 29, 1993, exceeding the minimum of 30 days, extending through December 3, 1993.

---

<sup>3</sup> DMV records provided the best and most complete data source for householder name and address throughout the state. It also provided a complete and uniform data set from which to solicit responses.

## **SECTION I -- STATE PROFILE**

Montana is the fourth largest State in land area. The population density of areas around Montana underscore the diversity of needs and housing conditions, ranging from a high of 3,470 people per square mile in Great Falls, to a low of 0.31 people in Petroleum County, as reported in the 1990 Census. With just less than 800,000 people, the State has only two entitlement areas:<sup>4</sup> Billings and Great Falls. While the entitlement areas are required under the National Affordable Housing Act of 1990 to submit separate CHAS documents, the areas and characteristics of Billings and Great Falls have been integrated into portions of this CHAS document.

### **A. MARKET AND INVENTORY CONDITIONS**

#### **1. DESCRIPTION OF THE STATE**

The following discussion of the State's market and inventory conditions seeks to establish the adequacy of decent and affordable housing in Montana. Beyond the descriptive value of the information, the analysis initiates the identification of the State's housing needs, primarily as they existed in 1990. The baseline analysis takes into account the differences of housing issues among geographic areas of the State by evaluating six cities, 11 Census Designated Places (CDPs), and all remaining areas for each of the 56 counties.<sup>5</sup> That discussion is further augmented with more current survey data analysis, include a survey conducted by the University of Montana which relates to a count of sheltered homeless persons in the State.

#### **i. BACKGROUND AND TRENDS**

##### **MONTANA'S ECONOMIC STRUCTURE**

The health of an economy is determined, in a large part, by the ability of one or more economic sectors to capture income from outside the area. The key notion is that income must flow from outside to inside the State. Those activities that can bring income into Montana are considered basic industry, as income is received from the export of a product. Workers in these exporting industries spend their earnings locally, thereby generating additional, indirect, economic activity. This indirect activity is termed nonbasic industry. The more times that income is spent within the State, and spent again, the more the State's economy becomes integrated.

People often define economic base only in terms of jobs, as an employment classification system that includes manufacturing, mining, agriculture, some forms of construction, and federal government employment.<sup>6</sup> But the use of employment as the central feature in defining the

---

<sup>4</sup> Metropolitan areas with populations of 50,000 or more.

<sup>5</sup>Butte is aggregated with Silver Bow County, and presented in the county data sections of the tables.

<sup>6</sup>The basic sector can also include other "non-traditional" sectors that bring income into an area. A good example is tourism. For the analysis presented here, a portion of the eating and drinking industries, and all of the lodging sector, are considered as basic employment.

economic base overlooks one very important thing: some "basic" components of the economy do not necessarily involve employment.

For example, if many retirees living off their retirement investments reside in the area, income still flows from outside and into the area. While the retiree is not employed, serving the demands of the retired population creates jobs and additional local income. Also, income distributed to those who may be supported by forms of welfare, or "transfer payments," can be considered basic because income also flows from outside to inside the area. This in turn causes demand for goods and services and results in nonbasic employment. It is income that drives economic activity.

A healthy economy is constructed upon two main building blocks, earned income from exporting industries, and "unearned income" from dividends, interest, rents, and government transfer payments. But to translate the total basic income flow into a nonbasic flow, one must measure the relationship between these two concepts. This ratio is called a multiplier. A unit rise or fall in basic income will tend to have a proportional impact on nonbasic income. The higher paying the basic sector job (or per capita unearned income source), the greater the nonbasic impact.

**DIAGRAM 1.1**  
**NONBASIC/BASIC MULTIPLIER**

As the State's economy becomes more highly advanced and integrated, income leaks out of the area more slowly: products and services previously imported will begin to be supplied locally. More people will enjoy the benefits of the basic income. When an economy is in decline, the reverse will occur: as basic sector income leaves the community, nonbasic income will be lost at an increasing rate. The multiplier is not a fixed relationship, it rises as the number of economic transactions rise, and falls as transactions decrease. Furthermore, as an

area declines and higher paying jobs are lost, unearned income sources will not be sufficient to maintain previous standards of living. Diagram 1.1, above, presents the nonbasic/basic multiplier for the State of Montana.<sup>7</sup> As can be seen, since the 1977 peak, Montana's economy has become less dynamic.

The economic base analysis stresses the importance of openness, what happens elsewhere is critically important. If Montana's economic base is diversified, it is relatively protected from wide fluctuations in demand for any one of its export goods or services. However, if it is overly dependent upon a single basic sector, it is at the mercy of fluctuations in demand for that sector's good or service.

Inherent with the notion of economic base is the assertion that people follow jobs. If the earned income component of the basic sector is shrinking, then those who cannot retire eventually seek employment elsewhere. A new level of population implies a different picture for the flows of total unearned income into the State. So, the impacts on population, derived from basic earned income, will ultimately have an impact on the basic *unearned* income flows, further altering the economic system.

**DIAGRAM 1.2**  
**AVERAGE EARNINGS IN MONTANA**  
1987 DOLLARS

<sup>7</sup>This multiplier was derived by assuming that income derived from agriculture, mining, manufacturing, and all federal employment is considered basic. This multiplier, while also including 50 percent of all service and retail trade, is not scientifically precise. It is presented here as illustrative of the changing economic structure of the state.

Montana's basic economy has historically been dependent upon a few resource-based industries. These are agriculture, mining, and manufacturing processes such as lumber and wood products, and the milling of minerals. Even though tourism is considered a solid basic sector with employment benefits, the rate of pay in this industry has typically been quite low.

The status of the State's economy, then, is dependent upon the health and viability of resource-based industries. Unfortunately, these industries are suffering from stagnant conditions or are declining. As Diagram 1.2, above, demonstrates, the average rate of pay in all of Montana's industries has been declining steadily since the early 1970s.

In addition, forest management practices are under review, and anticipated harvests from federal timber lands are expected to decline. University of Montana studies have forecast declines as large as 50 percent in northwestern Montana's lumber and wood products employment over the next ten years. Employment and earnings derived from agriculture remain speculative, at best. The mining industries are moving much further toward mechanization; and older existing facilities are closing in the face of increasing environmental constraints. These conditions imply an increasing degree of economic hardship for many Montana citizens.

On top of this complication, statewide unemployment rates have been rising over the last few years. Between 1990 and 1991, Montana's unemployment rate rose from 5.8 to 6.9 percent. Unemployment pressures have eased some, to 6.7 percent in 1992, but increasing unemployment worries still persist. Table 1.1, at right, presents the unemployment rates by county and the State as a whole over the last three years. There are several areas that are sustaining very high unemployment rates, while others are reporting much lower rates. For example, Big Horn County indicates the highest unemployment rate, 15.8 percent and Carter County the lowest, with 2.4 percent. Uneven economic opportunities exist within the State.

**TABLE 1.1**

Wibaux County	4.3	8.9	8.8
Yellowstone County	4.8	5.3	5.4
Montana	5.8	6.9	6.7

Collectively, these employment and income conditions underscore the difficulty working citizens of the State are encountering, as statewide average earnings have been declining for nearly 20 years. The economic limitations are anticipated to persist and the outlook appears to be somewhat dim.

## MONTANA'S POPULATION RACE

Montana is generally a racially homogeneous State, with 93 percent of the population white. Native Americans make up about 6 percent of the population, with Blacks comprising ¼ percent and Asian/Pacific Islanders and Other Races each comprising about ½ percent. Table 1.2, at right, presents the 1990 Census count of population by race and by relevant area designation. Note that this data, as all similar area designations in the FY94 CHAS, has been modified so that all "county" areas are comprised of the non-city and non-CDP areas; the latter areas have been subtracted from the county total data.

As seen in Table 1.2, Native Americans comprise the second largest segment of the population, but the majority tend reside on Montana's seven Indian reservations. These include the Blackfeet, the Rocky Boy, the Fort Belknap, the Fort Peck, the Northern Cheyenne, the Crow, and the Flathead reservations.

Areas having tribal organizations can have very high Native American concentrations. For example, Glacier

County has the largest number of American Indians; with 56 percent of the county's population.

Table 1.3 presents all the State's minority populations ranked by percent concentration. Areas of high racial minority concentration are defined as those exceeding about 12 percent, twice the State's average percent of the largest minority population, Native Americans.

With this definition, Glacier, Big Horn, Roosevelt, Blain, Rosebud, Lake, and Hill counties have the highest concentrations of Native Americans in the State. All are areas with tribal lands. However, Indian reservations are not an explicit part of the State's CHAS process at this time.

As an interesting anecdote, the Malmstrom AFB CDP area has the State's highest concentrations of other minority populations, where 8.4 percent are black and another 4.3 percent are Asian or Pacific Islander. This is due to the military installation there. No other area in the State has a black racial concentration above 1 percent. Bozeman has the next highest racial minority concentration: Asian or Pacific Islanders at 2.05 percent.

## ETHNICITY

Hispanic ethnicity concentrations are quite low in Montana. The 1990 Census indicates that the State has an average Hispanic concentration of a mere 1.5 percent. HUD guidelines call for identification of areas of ethnic concentration; using an accepted definition for ethnic concentrations (twice the State's average ethnicity, or 12 percent), one sees that few areas qualify. Table 1.4, at right, presents this data. Only two areas have relative concentrations of Hispanic people, Malmstrom AFB and Lockwood CDP.

## INCOME

Within Montana, per capita income varies widely, as evidenced by Big Horn County's low of \$7,148 and Helena's high of \$13,256. The statewide average is only \$11,213. This implies that significant variation may occur among households within the State. A more accurate way of inspecting the relative income between areas is to rank the percent of total household incomes below a particular threshold. This is better than comparing just per capita income as it accounts for households with additional wage earners. Data representing the percent of low income households in each area were computed and ranked. Low income concentrations are those areas having a large percentage of households below the statewide low income threshold, 80 percent of the State median family income, or \$22,435. Census income data is reported by category; \$22,500 is used to approximate the low income threshold. Table 1.5 presents all areas defined in this way and ranked by percent. Those that fall within the low income criteria are listed above the dotted line, starting at Park County. In general, there appear to be very large blocks of the population in low-income households. In fact, Wheatland County has the highest percentage of households in the low income category, with over 65 percent of the households. Only one area has less than 25 percent of its households in the low income category, Helena Valley Northeast CDP. Given these facts, large sections of Montana can be considered low-income areas.

Table 1.6, below, presents the actual number of households within each income category throughout the State. Overall, Montana has 49 percent of its households making less than 80 percent of the median family income in 1989. Furthermore, a whopping

## GENDER

Montana is approximately a gender-balanced State, with about 49.5 percent of population male, and 50.5 percent female. The major cities tend to have slightly more females than males, and the rural areas tend to have more males. Diagram 1.3, at right, portrays the area distinctions.

## AGE

The largest segment of the population is the very young, from 0 to 18 years of age. This group comprises 29.3 percent of the total. However, the population of Montana is somewhat older than the nation as a whole; the 1990 median age in Montana is 33.8 while the nation's is 32.9. The elderly (60 years of age and older) also have a significant representation in the age distribution of Montana with 17.6 percent. Diagram 1.4, below, presents the statewide age breakdowns. Table 1.7, below, presents the area age cohorts.

Montana	233,863	57,351	123,913	128,087	115,548	140,323	798,065

The 35-44 group follows as the third largest age class in the State with 16 percent. The 25-34 year old group has 15.5 percent, the 45-60 group has 14.5 percent, and the 19-24 year old group has the smallest representation with 7.2 percent of the total population.

## DISTRIBUTION

Sixty-five percent of Montana's population resides in small towns and rural areas of the State. The two entitlement cities have over 17 percent of the State's population, with all the other major cities of the State containing about 12.7 percent of the total. The remaining population resides in areas surrounding the larger cities, comprising about 5.7 percent of the State's population. These figures are displayed in Diagram 1.5, at right.

**DIAGRAM 1.5**  
**DISTRIBUTION OF POPULATION BY AREA**

## HOUSEHOLDS

There were 306,919 Montana households reported in the 1990 Census. For the purposes of this study, the households have been distinguished according to the following types: individual households; family households; elderly individual households; elderly family households; and two or more person non-family households. The fundamental point of distinction between these is the housing size requirements of the households. A further distinction is made between elderly and non-elderly households.

The predominant household type in Montana is the family household, which represents 51 percent of all Montana households. Two-person households also represent a large household group, followed by single households. All remaining households represent 40 percent of the population. Just as the elderly represent a significant portion of the population, they represent a significant portion of Montana's households. Of all households in the State, about 30 percent are elderly households. Accordingly, elderly families occupy over half of the two-person households in the State and just under half of all one-person households. Data representing all the State areas for family households, urban, rural, and total households is portrayed on the following page in Table 1.8.

## FAMILIES

Of the 211,650 families in Montana, 61.5 percent are rural. Montana families are generally headed by married couples. The number of households headed by single persons is significant and is of particular importance with regard to a discussion of affordable housing. Married couples represent 83.4 percent of the State's family types. Of the married couples, 48.6 percent have children, while 51.4 percent have no children. Elderly families, which generally consist of only husband and wife, comprise a large portion of the married couples with no children. The concentrations of couples is higher in rural areas of the State. Conversely, there are higher concentrations of households headed by single persons in the major cities.

There are currently 35,139 family households in Montana headed by single persons. This represents nearly 17 percent of the family households. Seventy-one percent of these households have children present. Furthermore, 75 percent of these households are headed by single women who are more likely to have children than a single-male-headed household. While a higher actual number of single-parent-headed families are located in rural Montana, the major cities have higher concentrations of this particular family type.

## HOUSEHOLD SIZE

Household size also varies significantly throughout the State. Diagram 1.6 presents the number of households separated by the number of people in each household. Note that the two largest groups of households are single and two-person households. The number of persons per household ranges from a high of 4.12 in the Malmstrom Air Force Base CDP to a low of 2.27 in Kalispell. Montana has an average of 2.60 persons per household. Specific area data relating to household size by number of persons per household is presented in Table 1.9, on the following page.

**DIAGRAM 1.6**  
**HOUSEHOLDS BY PERSONS PER HOUSEHOLD**

## RENTERS AND HOMEOWNERS (TENURE)

Just over 67 percent of Montana's occupied housing units are occupied by their owner (owner-occupied); the remaining 33 percent are renter-occupied. The rate of home ownership is much higher in the rural areas of the State (72.6 percent) than in the major cities (only 59.8 percent). As is true of the nation as a whole, the largest single group of homeowners in Montana is the elderly. Of all the owner-occupied units in Montana, 26.4 percent are occupied by those 65 years of age and older. This is true of both the major cities and rural Montana.

Overall, the 35-44 age group has the second highest rate of home ownership in both rural areas and the major cities. The total number of housing units was 361,155 in the 1990 census, of which over 15 percent were vacant. Diagram 1.7, below at right, displays the number of households, by ownership status, in each of the three geographic area designations addressed herein. Area statistics that describe renter and homeowners is presented on the previous page, in Table 1.10.

The people most likely to rent in Montana, in both rural areas and the major cities, are those in the 25-35 year old age group. Given that people in this age category are more likely to live in the cities and occupy an individual unit, and further, that home ownership is less affordable in the major cities, there is an indication of a need for assistance to young adults who are first-time buyers in the acquisition of homes. Those least likely to rent are those in the age group 45-54.

## SUMMARY

Over the last 10 years, Montana's population has not risen appreciably, increasing only by about 12,000 people. The number of households have risen more, due to fewer person per household. In regard to Montana's demographic complexion, the population is predominately white. Native Americans, the State's largest racial minority, are highly concentrated in areas with tribal organizations; however, the tribal organizations typically have their own housing operations and are considered outside the Montana CHAS development process and priority enumeration. Of course, Native American concentrations in areas of the State where Montana's CHAS does address are included herein, but available data does not distinctly identify the areas. There is little minority Hispanic concentration in the State.

Racial, ethnic, and household data in support of this narrative is presented on CHAS Table 1A, on page 29.

Economic conditions all across Montana have resulted in lower average real rates of pay over the last 10 to 15 years. Today, unemployment rates have risen and employment worries persist. Accompanying this one sees rising levels of low income households and vast sections of the State can be considered low income. Nearly 50 percent of all households reported income less than \$22,500 in 1989. This is significantly lower than the national median family income, which was nearly \$36,000 in 1989. Over 80% of all Montana Households are below the national median family income. Furthermore, it is becoming increasingly difficult for Montana's

**DIAGRAM 1.7**  
**RENTERS AND OWNERS BY GEOGRAPHIC AREA**

first time home buyers to complete a transaction, as the prices of homes are increasing faster than interest rates are falling.

## 2. MARKET AND INVENTORY CONDITIONS

### i. GENERAL MARKET AND INVENTORY

#### TYPES OF HOUSING

Single-family detached units are the predominant housing type in Montana. They comprise 65.6 percent of the State's total units. Multifamily units represent the second largest group at 18.3 percent.<sup>8</sup> Mobile homes comprise 15 percent of the total units. Diagram 1.8, at right, presents the percent of each housing type in the State. However, the presence of each housing type varies significantly around the State. For example, rural Montana has a higher concentration of single-family units than the major cities; these areas also have more mobile homes than the major cities. This implies that needs for housing around the State will vary depending upon the predominance of various housing types. To better view the large variations from area to area, housing type data for all geographic regions is presented in Table 1.11, on the following page.

DIAGRAM 1.8  
TYPE OF HOUSING UNIT

#### AGE OF HOUSING STOCK

According to the 1990 Census, nearly 27 percent of Montana's dwelling units were constructed between 1970 and 1980. Another 21 percent were constructed prior to 1940. Homes built before 1940 have some potential for structural problems relating to inadequate foundations and floor supports, poor plumbing, outdated electrical wiring, and substandard roofs. Because of this, pre-1940 housing tends to need moderate rehabilitation. Other prospective environmental hazards exist, which will be discussed shortly. Diagram 1.9 displays a pie chart representing the percent of occupied housing units in each age category. Large discrepancies underlay the statewide average in quality of housing construction. As noted earlier, some areas of the State have lost population. This implies a

DIAGRAM 1.9  
AGE OF OCCUPIED HOUSING UNITS

<sup>8</sup>Buildings with two or more units are considered multifamily units in this discussion.

shortfall in housing construction and increases the potential for a more hazardous housing stock. Table 1.12, on the following page, presents occupied housing vintage by area.

Still, over 15 percent of Montana's housing stock was listed as vacant in the 1990 Census. This includes for-sale properties, available vacant rentals, plus second or vacation homes. Diagram 1.10, at right, shows the vintage categories for the vacant homes. It appears that age plays a large role in whether the home is vacant, with over 26 percent of the vacant homes 50 years of age or older. Census data indicates that a large percent of vacant homes exist in the rural and less densely populated areas of the State. For example, a much larger percent of vacant homes have missing or incomplete kitchen and plumbing facilities and over 35 percent of the vacant housing stock in Meagher County lacks adequate plumbing. Overall, the State expects a portion of these homes to be lost through demolition and abandonment. Such losses, and other unsuitable housing conditions, in local housing stock varies widely around the State. The number of vacant homes, by age, is presented in Table 1.13, on the following page.

DIAGRAM 1.10  
AGE OF VACANT HOUSING STOCKS

## SUITABILITY CRITERIA

### SUBSTANDARD HOUSING

The aggregate number of housing units experiencing some form of substandard condition is not small. Since several segments of the population tend to be experiencing a disproportionate share of the severe and adverse conditions, the State offers suitability criteria to use when evaluating policy options that might be designed to alleviate tenant and homeowner substandard conditions.

Substandard housing conditions are those requiring critical repairs in order that the housing unit will not endanger the health, safety, or welfare of the occupants. (Failure to meet Section 8 Housing Quality Standards is included.) The presence of the following *moderate* physical problems defines a dwelling unit as substandard.

**Plumbing.** On at least three occasions during the last 3 months all the flush toilets were broken down at the same time for 6 hours or more.

**Heating.** Having unvented gas, oil, or kerosene heaters as the primary heating equipment.

**Upkeep.** Having any three of these six upkeep problems: water leaks from the outside, such as from the roof, basement, windows or doors; leaks from inside structure such as pipes or plumbing fixtures; holes in the floors; holes or open cracks in the walls or ceilings; more than 8 inches of peeling paint or broken plaster; or signs of rats or mice in the last 90 days.

**Hallways.** Having any three of these four hallway problems: no working light fixtures; loose or missing steps; loose or missing railings; and no elevator.

**Kitchen.** Lacking a kitchen sink, refrigerator, or burners inside the structure for the exclusive use of the unit.

## SUITABLE FOR REHABILITATION

Substandard dwelling units may still be suitable for rehabilitation. These types of units must be both financially and structurally feasible for rehabilitation. Such actions do not include units that require only cosmetic work, correction or minor livability problems, or maintenance work. The units must, however, be designed for year-round use. This means that construction and heating of the unit should make it usable for year-round occupancy; i.e., built as a permanent structure, properly equipped and insulated for heating based on the climate, and have heating equipment adequate for long cold periods.

## NOT SUITABLE FOR REHABILITATION

Unfortunately, not all substandard units are in good enough condition to rehabilitate in a safe and cost-effective manner. Others may not be properly designed. The latter includes dwelling units that were not designed for use year-round, not built as a permanent structure, not properly equipped and insulated for heating based on the climate, and without heating equipment adequate for long cold periods.

The former are substandard dwelling units characterized by the presence of several of the following *severe* physical problems.

*Plumbing.* Lacking hot or cold piped water or a flush toilet, or lacking both bathtub and shower, all inside the structure for the exclusive use of the unit.

*Heating.* Was uncomfortably cold last winter for 24 hours or more due to breakdown of heating equipment and it broke down at least three times last winter for at least 6 hours each time.

*Electric.* Having no electricity or all of the following three electric problems: exposed wiring; a room with no working wall outlet; and three blown fuses or tripped circuit breakers in the last 90 days.

*Upkeep.* Having any five of the six maintenance problems listed above;

*Hallways.* Having all of the four problems listed above in public areas.

Substandard housing units that are neither structurally feasible nor financially practical (i.e., cost effective) for repair and rehabilitation are considered as substandard housing unsuitable for rehabilitation and unsuitable for habitation by any in-need group.

Available data suggests that there are both moderate and severe physical problems in Montana's housing stock. Statewide, 8.5 percent of the stock lacks sufficient kitchen or bathroom facilities. Table 1.14, on the following page, depicts the condition of housing as it relates to incomplete kitchen and bathroom facilities on a detailed area basis. Several rural counties have an excess of 30 percent of their stock in substandard condition: Judith Basin (34.7 percent), Meagher (35.1 percent), and Mineral County (30 percent). Petroleum surpasses 27 percent, Phillips is nearly 23 percent, and Broadwater exceeds 20 percent. This implies that many of the structures throughout the rural portions of the State may require rehabilitation and repair.

## HOUSING SIZE

Of the approximately 361,000 housing units in the State, most are two or three bedroom units. However, 2.4 percent have no bedrooms, and another 4.7 have five or more bedrooms. Diagram 1.11 graphically portrays the size of Montana's housing stock by number of bedrooms. Detailed area data is presented on the following page in Table 1.15.

**DIAGRAM 1.11**  
**UNITS BY NUMBER OF BEDROOMS**

## AFFORDABILITY AND COST BURDEN

In assessing whether or not there is affordable housing available in Montana, both income levels and housing costs have been inspected.<sup>9</sup> A monthly housing cost in excess of 30 percent of income constitutes a cost burden. Approximately 18.6 percent of Montana households (59,217) earn less than \$10,000 annually, and 32.1 percent (98,548) earn less than \$15,000. Therefore, a monthly housing cost in excess of \$250 represents a cost burden to nearly one-fifth of Montana households, and payments over \$375 would be a burden to nearly one-third. The following analysis examines the affordability of housing to renters by looking at the percentage of monthly income that would be required to make average rent and utility payments. Affordability for potential homeowners is examined by looking at the cash outlay and annual income required if monthly housing costs are to equal 30 percent of income, for average and low priced homes. These calculations are intended to indicate the typical costs. Costs and income requirements are shown for both conventional financing and Federal Housing Administration (FHA) or Farm Home Administration (FmHA) financing. These cost burdens and income requirements will then be compared to census information to see how many households in Montana can afford the average home.

Rent burden calculations were made by using 1990 Census figures for contract rent. For home buyers, the calculations for monthly payments and cash outlay at closing were made by using 1990 Census figures for the average asking prices of vacant for-sale housing units and applying formulas used by the banking industry, the FmHA, and the FHA. For conventional loans, cash outlay at closing includes a 10 percent down payment plus typical closing costs.<sup>10</sup> The Farm Home Administration (who makes loans in rural areas with populations of less than 10,000 people) estimates that there will be no cash outlay of closing down payment. They assume only typical Farm Home closing costs.<sup>11</sup> The FHA cash outlay at closing includes a 3 percent down payment plus 43 percent of the closing costs. The other 57 percent of the

<sup>9</sup> Income and housing cost data taken from the 1990 Census -- U.S. Department of Commerce, Bureau of the Census.

<sup>10</sup> Typical closing costs estimated with the assistance of Colleen Cebula, First Interstate Bank of Missoula.

<sup>11</sup> Information on Farm Home Administration loans and typical closing costs provided by Peter Halvorson, Farm Home Administration Office, Hillsboro, Oregon; and Nikki Stahley, Farm Home Administration Office, Billings, Montana.

closing costs and the required mortgage insurance costs are added to the loan amount.<sup>12</sup> The monthly payments for all of the loans are based on a 30-year, 9 percent fixed-rate loan plus taxes and insurance. Average utility costs of \$101 per month for a two-bedroom, multifamily unit with electric heat have been added to rent cost to calculate cost burden for rental units. Average utility costs of \$125 for a single-family, three-bedroom home with gas heat have been added to the monthly mortgage payments to calculate income requirements for homeowners.<sup>13</sup>

## AFFORDABILITY FOR RENTERS

Low-income renters in Montana's rural areas are less likely to experience severe cost burden than low-income renters in Montana's major cities. Households earning \$10,000 or less annually would be paying at least 52 percent of their income to occupy the average housing unit in the major cities. This constitutes a burden far in excess of the 30 percent standard. Similarly, in the census designated places, a household with a \$10,000 annual income would have to use 55 percent of their income to rent the average housing unit. The situation for that income group is of particular concern in the Sun Prairie CDP, where the renter cost burden is highest, at 65 percent for the average rental housing unit.

**TABLE 1.16**  
**AFFORDABILITY OF AVERAGE RENTAL UNITS**

AREA	MONTHLY RENT	PERCENT OF INCOME	PERCENT OF INCOME
	\$	\$10,000	\$15,000
Sun Prairie CDP Average	543	65%	43%
City Average	436	52%	35%
CDP Average	461	55%	37%
Rural Average	331	40%	26%

Table 1.16, above, illustrates the cost burden of average priced rental units in cities, CDPs, and the remaining rural areas. As that table shows, average rent in the rural areas is lower than in urban areas, but it still presents a cost burden of 40 percent to a householder with \$10,000 in income. Even for a household with a \$15,000 annual income, the cost burden is over 30 percent for all but the rural areas. Although the cost burden is not severe for that group, the important questions for those rural areas become if there are enough rental units available, if they have adequate kitchen and plumbing facilities, and whether or not they are maintained at or above minimum health and safety standards.

While the above analysis focused on whether low-income households could afford average rents, another question should also be examined. What portion of the population cannot afford the "average rent"?<sup>14</sup> Table 1.17, below, illustrates average rents, the income needed to pay

<sup>12</sup>FHA loan information and typical closing cost estimates provided by Jeff McKinnen, First Interstate Bank, Portland, Oregon; and Charlene of American Federal Savings & Loan, Butte, Montana.

<sup>13</sup>Section 8 Utility Allowances, revised October 1992.

<sup>14</sup>Average rent computed from the number of rental units in each rent cost category and the midpoint of the rent category, as reported in the 1990 Census, plus utility costs used in the Section 8 Housing Utility Allowance Program (revised October 1992).

**TABLE 1.17**  
**INCOME NEEDED TO PAY THE AVERAGE RENT**

AREA	MONTHLY RENT	INCOME NEEDED	% HH WITH > \$15,000 INCOME
City Average	436	\$17,440	33%
CDP Average	461	\$18,440	26%
Rural Average	331	\$13,240	32%

that average, and the percent of households with an income below \$15,000. As this table demonstrates, 26 to 33 percent of the population does not have the income to afford the average rent. Furthermore, there is wide disparity between urban and rural costs and cost burdens. Data demonstrating the degree of difference between the various regions throughout the State is presented in Table 1.18, on the following two pages. This data portrays the number of households in each area that fall within a particular rent level category.

#### **AFFORDABILITY FOR HOME BUYERS**

What holds true for renters is generally true for the first time-home buyer in Montana. The cost of buying a home in rural Montana is less than it is in the cities and CDPs, although there is some disparity among rural areas in the average values of vacant, for sale homes. Table 1.19, below, shows the average values for homes in cities, census designated places, the remaining rural areas, and in Gallatin County which had the highest average home value in Montana (according to the 1990 Census). Those average values are then used to show the costs to first-time home buyers who are able to use conventional financing. Recognizing that many first-time buyers cannot come up with the cash that is required at closing to utilize conventional financing, Table 1.19 gives some examples of the cash and income requirements for both Farm Home and FHA financing.

In the rural regions of eastern and north central Montana, where the vacancy rates are high, the average asking price for a vacant, for sale home was under \$26,000 at the time of the 1990 Census.<sup>15</sup> At this rate, a household income of approximately \$15,200 would make a home in those areas affordable if the potential home buyer is able to take advantage of Farm Home financing. In those rural areas, rather than income being a limiting factor, the condition of the \$26,000 home and whether it would qualify for any type of financing appears to be a crucial limitation.

In the rural regions of south central and southwestern Montana, which have relatively high vacancy rates, an average home was reported to be valued at about \$50,000 in 1990. An annual household income of approximately \$24,000 to \$25,600 (depending on the type of financing available) would generally make a home affordable in these regions. The average asking price of a vacant, for sale home in rural western Montana is generally higher than other rural areas of the State. In those higher-cost areas, the asking prices were \$60,000 or more, requiring a minimum household income of approximately \$27,000 to \$30,000, depending on the type of financing available.

In the CDPs, the average home value was reported to be approximately \$60,800 in the 1990 census. With conventional financing, the minimum income required to buy that \$60,800 home is \$27,600. Average home value in the major cities is approximately \$67,700, requiring a minimum annual income of approximately \$30,000 if using conventional financing. The major cities have comparatively low vacancy rates ranging from 4.0 percent to 10.2 percent as opposed to the rural range of 17.3 percent to 22 percent. This indicates a higher demand for housing in the cities and supports the higher cost of housing in those areas.

It is important to note that while mortgage rates appear affordable to many, especially since interest rates have fallen to as low as 6.5 to 7 percent, one can no longer use Census figures for an accurate value of housing sales costs.<sup>16</sup> Another difficulty relates to the ability to save for a down payment,, which can be a prohibitive factor, especially for conventional financing. While the down payment requirements are lower for FHA financing, the monthly payments and minimum income requirements are higher due to the larger loan amounts. Also important to note is that the banking industry calculations for minimum income requirements are based on a standard that the total of the principle, interest, property tax, and insurance payments can not exceed 28 percent of gross income. It is also a standard requirement that total monthly obligations (including automobile and credit card payments) not exceed 36 percent of gross income.<sup>17</sup> For those households whose other monthly obligations exceed 8 percent of gross income, their minimum income required to purchase a home will be higher than indicated in

---

<sup>15</sup>The term "asking price" and "home value" are synonymous in this discussion.

<sup>16</sup> It is the opinion of the Montana Board of Housing that housing prices have increased faster than interest rates have fallen, thereby leading to a slowdown in the provision of affordable housing to Montanans and further affordability problems for home buyers.

<sup>17</sup> Colleen Cebula, First Interstate Bank of Missoula.

Table 1.19. All area cost values for owner-occupied homes is presented in Table 1.20, on the next two pages.

Table 1.19 also lists that portion of total households which earn less than \$25,000 annually. Examining the incomes required if housing costs are not to exceed 30 percent of income, we see that purchasing a home through conventional financing is out of the reach of over half of the people in the cities and CDPs. Purchasing a low-priced home becomes more affordable through the use of Farm Home or FHA financing and in the rural areas of the State. However, the question again becomes one of whether or not these low-priced (and typically rural) homes are in a condition that will allow them to qualify for financing.

## HOUSING DEMAND AND SUPPLY

Three housing availability issues are of concern for Montana. The first is the availability of rental units, especially low-cost units. The second issue is the availability of homes which meet the criteria for loan assistance and mortgage insurance. The third availability issue is the number of affordable homes on the market for low- and moderate-income people.

In regard to the first issue, there were approximately 34,601 low-rent units (units which cost no more than \$250 per month) in Montana at the time of the 1990 Census. Approximately 11,389 low-rent units are federally assisted, and the waiting list for publicly assisted units numbers 6,285. The supply of low-rent and/or assisted units does not meet the demand. There is a great disparity between the number of households earning less than \$10,000 and the actual number of low-rent units.

The second issue is the availability of homes which meet the criteria for loan assistance and mortgage insurance. It is true that the housing market is tight in some areas of the State, particularly in the major cities. However, in the rural areas of the State where vacancy rates are higher (particularly in the eastern region), the issue becomes more complicated by one of housing condition. In many instances, the poor condition of the vacant homes preclude the use of federal mortgage insurance programs. Without these programs, homes are not easily financed and are consequently out of reach for many potential home buyers. The result is a diminished supply of affordable homes.

The third availability issue is the shortage of affordable homes on the market for low- and moderate-income people. This is of particular concern in the major western Montana cities, which tend to have the lowest vacancy rates in the State and the highest home values (according to the 1990 Census). Where the market is tight and prices are escalating, it is becoming increasingly difficult for low- and middle-income people to purchase homes.

To get an overall picture of the availability of housing units, Table 1.21, below, combines data on both rental and owner-occupied housing. This table uses the 1990 Census information on rental units by price range and value of owner-occupied housing units. The table

**TABLE 1.21**  
**AVAILABILITY OF RENTAL UNITS**  
**AND FOR-PURCHASE HOMES**  
**COMPARED TO NEED**

AREA	NUMBER OF RENTAL UNITS > \$300	NUMBER OF HOMES > \$36,000	TOTAL UNITS	HH WITH INCOMES > \$16,000	NET SHORTAGE
City Average	17,878	3,611	21,489	32,047	10,558
CDP Average	1,736	414	2,148	4,260	2,101
Rural Average	28,117	21,996	60,113	62,261	12,138
TOTAL	47,730	26,021	66,608	88,548	24,797

adds the number of rental units available for under \$300 and homes valued at less than \$35,000. This number of housing units is then compared to the number of households earning less than \$15,000. The lack of available housing can be seen in the last column. Overall, these numbers point to a large gap between the demand for housing and the supply of affordable housing, perhaps as high as 25,000 units.

#### **ASSISTED RENTAL HOUSING LOSSES**

The State of Montana feels that prospective losses to the stock of assisted rental units could occur in two ways. Fair market rents (FMR) were recently revised. The new values are significantly lower than earlier FMRs. Market rents in many jurisdictions around the State are higher than the new proposed rents. Therefore, owners of properties having Section 8 certification may elect to turn to the open market, thereby securing higher rents for their properties.

The second aspect to prospective losses to the stock of assisted rental units through the successful conversion of public housing to private ownership, via the public housing resident initiates. In the event that the public stock is not replaced, for any reason, some public rental units could be lost.

## LEAD-BASED PAINT HAZARDS

Homeowners and renters in the county face other prospective hazards; one of greatest concerns relates to lead-based paint. All homes built prior to 1980 have some chance of containing lead-based paint on interior or exterior surfaces. Housing units built before 1940, which make up nearly 22 percent of the housing units in Montana, are much more likely to contain lead-based paint than newer homes.

One can compute an estimate of the number of units at risk for lead-based paint. According to HUD estimates, 90 percent of units built before 1940, 80 percent of those built between 1940 and 1959, and 62 percent of units built from 1960 to 1979 may have lead-based paint. This computation was applied to all units (occupied and vacant), and is portrayed in Table 1.22, on the previous page. As seen, there are over 220,000 units Statewide that are potentially at risk for lead-based paint hazard. However, there are two additional factors that place a dwelling most at risk: tenure (rented or owned) and the income of the household.

HUD prepared special tabulations of data for the CHAS development process, as related to lead-based paint. The data cross-tabulates tenure, age of unit, and affordability group (very low and other low income). Within all very low and low income renter households, about 58,019 are estimated to have high potential for lead-based paint hazards. For very low and low income owner occupied households, another 73,690 homes are at risk of lead-based paint hazards. While the incidence of prospective risk is higher for the low income households, the low income renters have greater risk as the dwelling units usually are in less suitable condition than the owner occupied unit.

## SUMMARY

Single family detached homes are the predominant housing type in Montana, making up about 66 percent of the housing stock; however, the share of the stock varies significantly at the local level. Statewide, about 21 percent

of the stock of homes were built prior to 1940, thereby increasing the probability of lead-based paint hazards, especially for low income households. Other maintenance and structural deficiencies also tend to exist in these older structures, as does a higher incidence of vacancy. Overall, 66 percent of the housing stock has 2 or 3 bedrooms.

In recent years, the single-family housing market has tightened, with sharp increases in home and rental prices. Because of rising unemployment rates and falling wage rates, some households face a wide financial gap between the supply of affordable housing and the quantity demanded. Market conditions are very favorable for the sale of existing homes at premium prices and development of expensive to upper-end single-family houses which sell quickly in the rapidly growing parts of the State. While data seems to support a need for affordably priced homes, the market is not supplying those units to any appreciable degree.

For multifamily units and rental property, market conditions favor existing units commanding increasing rents. Pressure on rents in the rapidly growing areas of the State does not appear to be easing, as few new multi-family affordable units are being constructed. In slower to declining sections of the State, low incomes suppress even modest rental property improvements, thereby increasing the incidence of deferred maintenance. Housing suitability problems are persisting in these areas. CHAS Table 1B, addressing Market and Inventory Conditions, is on page 50.

## **IMPEDIMENTS AND OPPORTUNITIES FOR PROVISION OF HOUSING**

Current conditions indicate that a lack of incentive for creating affordable home ownership opportunities has persisted, thereby creating an extreme shortage of affordable housing supply. Barriers to construction of multifamily dwellings typifies current market conditions, which impede the creation of affordable rental housing as well. Economic theory suggests that demand pressures placed on the housing market can be relieved by more supply coming into the marketplace. Market conditions indicate that a significant degree of market demand for affordably priced homes and rental properties remains unmet.

There remains hope, however, as two events have occurred over the last year that may lead to corrections in the market place. One relates to the Low Income Housing Tax Credit (addressed later in this report) which was made a permanent part of the federal tax code. This will enable affordable housing to be more attractive to investors, although its results may not be seen for quite some time. Secondly, the Montana Legislature passed into law a bill giving local jurisdictions the ability to pass tax deed properties into the hands of nonprofit entities. This too is discussed later in this document and may lead to the provision of additional affordable housing.

In summary, there appear to be mostly impediments, and few opportunities, to the development of affordable housing in the current housing market.

## ii. INVENTORY OF FACILITIES AND SERVICES FOR THE HOMELESS AND PERSONS THREATENED WITH HOMELESSNESS

The Survey of Montana's Housing Need, submitted to 50 percent of the FY93 CHAS mailing list, requested information related to a variety of housing facilities and services throughout the State. The following tables present the reported facilities and services. Data provides estimates of the number of emergency shelters, transitional housing for homeless persons, permanent housing for homeless persons with disabilities, and overnight sleeping capacity for each facility. Also covered are day shelters, soup kitchens, and other facilities providing assistance to homeless persons on less than an overnight basis. The nature and extent of the programs providing vouchers to assist homeless person in obtaining shelter, meals, and other services is presented too, as is the general nature and extent of social service programs for assisting the homeless.

As much of the data was collected via survey instrument and not all respondents provided specific detail about all facilities and services, follow-up letters requesting further information are being sent to all the cited facilities. The data gathered from the follow-up letters will be incorporated into the information clearinghouse database and incorporated with the FY95 CHAS Annual Plan.

Table 1.23, below, presents the facility inventory for emergency shelters and transitional housing throughout the State of Montana.

### iii. INVENTORY OF SUPPORTIVE HOUSING FOR NON-HOMELESS PERSONS WITH SPECIAL NEEDS

The Montana Housing Survey, submitted to 50 percent of the FY93 CHAS distribution list, requested information related to a variety of housing facilities and services throughout the State. The following tables present the reported facilities and services as they relate to an inventory of supportive housing for non-homeless persons with special needs. Included are estimates of the number and types of supportive housing, such as group homes, single-room occupancy, or other housing that includes a planned service component. Other efforts to coordinate service programs for addressing the needs of populations in supportive housing are noted, and the nature and extent of programs for ensuring that persons returning to the community from mental and physical health institutions is mentioned. As much of the data was collected via survey instrument, and not all respondents knew specific details about all facilities

and services, follow-up letters are being sent to all the cited facilities, requesting further information, and will be incorporated into the information clearinghouse database and incorporated with the FY95 CHAS Annual Plan.

Table 1.27, below, provides data related to programs assisting persons that are returning to the community from mental and physical health institutions.

## MENTAL HEALTH PLAN

The Residential Services Component of the Montana State Mental Health Division includes the State's two mental health institutions: Montana State Hospital and the Montana Center for the Aged. One of the major emphases in the Montana Public Mental Health System Plan regarding the State Hospital is improving the process of transition for patients going from the hospital to the community. This goal is outlined in the Public Mental Health System Plan:

The process of patient discharge planning at the hospital will be reviewed and updated. Formal discharge planning for each patient will begin at the time of admission to the hospital and will involve staff members from the hospital and the community mental health center that serves the patient's home community. This will help to identify the components of hospital treatment that will be important in helping patients prepare for a successful return to their home community. It will also help to identify the service and supports that patients will need upon discharge from the hospital.

In addition, several hospital staff members will be designated "aftercare coordinators" and will be responsible for developing and updating an aftercare plan for each patient assigned to them, in conjunction with staff members from each region's community mental health center.

The Mental Health Plan identifies a need for a system of community services for adults with severe and disabling mental illness. Housing for the mentally ill, one of the strategy areas, calls for the continuation of the 100 beds in group homes, and the addition of three group homes for mentally ill elderly persons (eight beds). The plan proposes building nine, one-apartment transition beds, and payment of rental cost for apartment managers at these sites. Emergency funds for 200 persons will be made available to assist clients with rent deposits, furnishings, and emergencies. A department staff person will be assigned to provide technical assistance in housing the mentally ill. These plans go along with the Mental Health Division's goal of encouraging the provision of supportive services in the "least restrictive, most natural and least disruptive setting possible." Table 1.29 presents the types and amount of services available around the State.

## AGING PLAN

Montana's Older Americans Act (1987) reaffirms the State's commitment to its older citizens. The act described older Montanans as a valuable resource that it is not receiving sufficient services in all areas of the State. The plans laid out in the act are to develop appropriate programs, coordinate and integrate all levels of service, create a directory of available services and transportation to them, programs to facilitate self-care, physical and mental health care, legal programs, adult education, and research in aging.

The organizer of elderly assistance is the Governor's Office on Aging, established in 1983. They are responsible for developing and administering the State's plan on aging, develop an intrastate funding formula, represent the interests of the elderly in State legislative and regulatory bodies, and evaluate Area Agency on Aging activities.

## B. NEEDS ASSESSMENT

### SUMMARY OF MONTANA'S HOUSING NEEDS

The lack of affordable housing for very low-, low-, and moderate-income persons has risen in prominence as a national policy issue. The lack of affordable housing across the nation has affected individuals, families, and the elderly, whether homeowners or renters. According to a 1986 report prepared by the National Governor's Association, housing costs are rising faster than income.<sup>18</sup>

Montana has not escaped the influences of the nation's housing problems. An analysis of the number of low-rent units, low-cost homes, and the number of households earning less than \$15,000 per year indicates that there may have been a shortage of 25,000 units of affordable housing to those households in 1990. This particularly affects families, who make up almost 70 percent of all Montana's households. Today, the situation is much worse as pressures and constraints on the housing market have spread to affect Montanans of all income categories.

These shortages have driven monthly rental payments and housing costs up sharply in the last few years. This places many people at risk of homelessness and places home ownership out of reach for many Montanans. Even though there is great demand for low-cost housing, there has been little new construction of single-family or multifamily units for low- and moderate-income Montanans.

Rehabilitation of the existing housing stock also is a pressing issue. Many occupied units around the State are in poor condition because their owners cannot afford maintenance costs. Elderly Montanans, who constitute the largest group of homeowners in the State, often lack the

---

<sup>18</sup> *Decent and Affordable Housing for All: A Challenge to the States*. National Governor's Association, 1986.

resources necessary to maintain their homes. For potential home buyers, units which stand vacant for long periods of time constitute a rehabilitation problem. Often the cost of bringing the units up to a liveable standard is prohibitive. The poor condition of the units can also preclude the use of mortgage insurance programs, without which the units are not easily financed.

There is also a need for modification of existing units. Modification of units is required to make housing accessible to Montana's physically disabled population, some of whom currently live in units which are not adequately equipped. In addition, energy inefficient units place an unnecessary cost burden on Montana's renters and homeowners. Energy conservation modifications are needed to address the overall issue of affordable housing across the State.

A number of groups in Montana have special needs linked to the provision of affordable housing. For homeless people, the disabled, families headed by single parents, and the elderly, there is a need for supportive services which facilitate independence. Homeless youth in Montana, while not as prevalent as in other areas of the country, are finding fewer available units in some local shelters. These facilities are simply not able to meet the need for emergency and transitional housing and the services the youths need to move back into society.

As well, single parents head 17 percent of Montana's families. Where there is a high rate of single-parent families in public housing facilities (a situation more common to Montana's major cities) the provision of day care and job training services is needed both to facilitate the family's move toward self-sufficiency and maintain a stable public living environment.

The elderly make up more than 17.5 percent of Montana's adult population and represent the largest group of homeowners in the State. Congregate care housing for this group, which fosters independent living while providing supportive services, may become a compelling need in the future.

There were more than 50,000 mobile homes in Montana in 1990. Whereas manufactured and mobile homes represent an affordable housing alternative for many Montanans, such owners tend to face restrictive or discriminatory zoning laws or practices in many areas, particularly those in rapidly growing parts of the State. The challenge to policy makers in Montana is to identify and press for equitable alternatives to current zoning and land-use conditions for low- and moderate-income Montanans.

Montana's economy has suffered along with the national recession. Industrial activities related to the State's resource base declined, particularly lumber and wood products. Structural changes in the State's economy have compounded the problem. Many of these economic difficulties will continue. Without proper intervention by housing specialists, the lack of available, affordable, and suitable housing may persist.

There has been a tremendous change in the statewide housing market during 1992. Vacancy rates have continued to drop dramatically since the 1990 Census. For example,

Glendive had 300 vacancies in 1990, compared to 30 in October 1992. In Sidney, where 75 rental homes were converted to owner-occupied units, purchase demand for single-family homes has virtually eliminated one-year leases for rentals. Missoula's rental vacancy rate has hovered near zero since April 1992. In Miles City, low-rent units are rented as soon as they hit the market. Compared to other States, Montana housing was in past years fairly affordable. This is no longer the case across much of the state, especially in the more urbanized areas.

Montana's limited resources are not adequate to address *all* the housing requirements of low- and moderate-income households, elderly Montanans, people with special needs, and other in-need populations. The Montana Department of Commerce (MDOC) and the people of the State share in the task of exploring creative approaches to expanding the supply of housing across the State. Together, through the stewardship of MDOC, Montana intends to move forward in securing and applying federal, State, and private resources to solve the State's housing problems.

This section describes Montana's housing needs in greater detail. These needs were identified by housing officials, constituency organizations, and housing lenders among others across Montana using telephone interviews conducted during October 1992 and mail surveys sent out during fiscal 1993. Supporting data is included where available. The order in which this narrative is presented is not meant to imply any priority rating, as the degree of one need can be acute in one area of the State, another can be equally severe in another part of the State.

## **B.1. CURRENT ESTIMATES OF HOUSING NEED**

### **B.1.A. GENERAL NEEDS ANALYSIS**

During the FY93 CHAS development process, telephone surveys of about 40 housing officials were conducted. During the FY94 CHAS development process, three mail surveys were conducted. One comprised a systematic sample of the FY93 CHAS Annual Plan distribution list. This entailed selection of a sample of about 385 persons scattered throughout the State.<sup>19</sup> This survey is termed the *Survey of Montana's Housing Needs*. The second comprised a sample of randomly selected Montana households. The latter survey was designed to adequately sample middle income households. This would then over sample low and very low income households, thereby under sampling the wealthier households. This comprised a sample of about 3,650 records. This instrument is termed the *Montana Housing Survey*. Both the above instruments, along with cover and follow up letters, are included in the appendices at the end of this report. The third survey was conducted by the Community Development Bureau and focused primarily on zoning and land-use planning issues. The *Montana Housing Opinion Survey* sampled about 300 persons and is summarized below as well.

---

<sup>19</sup> A systematic sample was drawn from the CHAS mailing list. A systematic sample approximates a randomization technique; here, every other name was selected. However, the population in the study has significant self-selection bias. This survey is not considered scientific.

## SURVEY OF MONTANA'S HOUSING NEEDS

The *Survey of Montana's Housing Needs* was designed to collect specific data from knowledgeable housing specialists throughout the State, such as vacancy rates, local needs, and opinions related to impediments and barriers to affordable housing in Montana. Most of the quantitative questions requested ranking the degree of the issue (problem or need). There also was a series of questions related to the inventory of homeless facilities presented in Section I.A.3.ii and iii, and a set of open-ended questions soliciting general responses. All are reviewed below (except the inventory data presented earlier).

The Housing Needs survey solicited input from a very broad cross-section of Montanans involved in housing issues, whether construction, sales, lending, program administration, planning, or public policy. It also included responses from State and local agencies associated with health, environmental services, disability, public instruction, Indian Affairs, councils on aging, low income coalition, and others. Table 1.30, below, presents a summary of the number of respondents by occupation.

**TABLE 1.30**

Contractor/Engineer	5
Other Business Owner	4
Other	27
<b>TOTAL</b>	<b>169</b>

One of the first issues requested related to type of general housing problem. In earlier CHAS documents, Montana identified four basic problem areas related to housing. These are availability, affordability, accessibility, and suitability. Respondents were requested to categorize the severity of each problem as they relate to rental housing and owner-occupied housing. Table 1.31, below, presents the results. Respondents indicated that rental housing is moderately expensive to very expensive, is somewhat unsuitable to not suitable, and generally not very accessible to the disabled. Most interestingly, nearly 90 percent of respondents (150 of 170) indicated either 'very short' or 'extreme shortage' for rental housing. This implies that

**TABLE 1.31**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**DEGREE OF HOUSING PROBLEM**  
**BY TENURE**

		NUMBER OF RESPONDENTS					
		AVAILABILITY					
		PLENTIFUL				SHORT SUPPLY	
		1	1	1	6	11	38
		2	10	16	33	27	50
		170	112	167	29		
		AFFORDABILITY					
		UNDERPRICED				VERY EXPENSIVE	
		1	8	20	52	24	32
		0	3	20	39	36	48
		169	32	174	28		
		SUITABILITY					
		VERY SUITABLE				NOT SUITABLE	
		0	10	12	41	52	38
		1	17	25	44	35	34
		168	15	166	10		
		ACCESSIBILITY					
		VERY ACCESSIBLE				NOT ACCESSIBLE	
		1	0	4	25	33	69
		0	1	9	22	44	61
		168	36	165	28		

Montana lacks an adequate supply of rental housing at any price and, therefore, has critical shortages of affordably priced rental housing. While not as severe, owner-occupied housing is also in short supply, with prices generally too high to be classed as affordable.

**TABLE 1.32**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**CHANGE IN POPULATION BY GEOGRAPHIC AREA**

	NUMBER OF RESPONDENTS					Total Respondents
	NE	SE	C	NW	SW	
YES	4	11	17	28	29	89
NO	13	6	19	10	18	66
TOTAL	17	17	36	38	47	155
(IF YES, THEN % CHANGE)						
AVG % CHANGE	7.5%	7%	11.13%	13.12%	10.93%	

While the reasons for these problems are many, often these issues are made more critical by sudden changes in the level of population moving into or out of a particular region. Surveyed individuals were asked as to what degree their local population has increased since the 1990 Census. Table 1.32, above, presents respondent opinions related to the percent change in the level of local population since the 1990 Census was taken. While a majority of respondents saw

no change in population in the northeast section of the State, others sensed significant changes in population, such as the northwest and southwest portions of the State.

Respondents were also asked about the impact on cost of housing of building and energy efficiency codes, and zoning regulations. It is the opinion of the group that these types of public policy issues do not appreciably affect the cost of housing. The vast majority noted that these had no effect on the cost of housing, one indicated that these types of actions decrease the cost, and 10 to 13 respondents noted that these actions can increase the cost. One can deduce that these policy increase the initial cost of housing modestly. Table 1.33, below, presents this data. As an anecdote, current Least Cost Planning arenas, related to electric and gas utility planning and resource acquisition activities, generally have recognized that by increasing the energy efficiency of housing, additional up-front costs are placed on the structure. However, these costs typically pay for themselves over the life of the home and "energy efficiency measure" (increased ceiling, wall, or floor insulation levels, thermal paned windows,).

**TABLE 1.33**  
**SURVEY OF MONTANA'S HOUSING NEED**  
**EFFECTS ON COST OF HOUSING BY PUBLIC AND PRIVATE POLICY ISSUES**

Factor	NUMBER OF RESPONDENTS						Total Respondents
	Decrease Cost		No Effect		Increase Cost		
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Building Codes	1	1	11	72	44	19	161
Building Energy Efficiency Codes	1	6	12	67	49	13	159
Zoning Regulations	2	2	4	80	37	21	156

The question related to the impact on housing of building and zoning codes was approached from an alternate perspective. Respondents were asked if these types of public policy issues impact the *availability* of housing in their local jurisdictions. Table 1.34, below, presents the findings of this question, by geographic region. Note that nearly one third of the respondents do feel that these public policies restrict availability of housing. In particular, the northwest region respondents feel much more strongly that building and zoning regulations tend to impact the availability of housing.

**TABLE 1.34**  
**SURVEY OF MONTANA'S HOUSING NEED**  
**DO BUILDING AND ZONING REGULATIONS**  
**EFFECT HOUSING AVAILABILITY.**  
**BY GEOGRAPHIC AREA**

YES	2	7	10	17	17	53
NO	15	12	28	24	32	111
Total Respondents	17	19	38	41	49	164

Respondents were also asked to review and rate the degree of need by various types of in-need groups. The results of this question indicate that, given the incidence of certain types of in-need groups, some needs appear more critical in one area than in another. In Table 1.35, above, the degree of need for the elderly and mentally or physically disabled is rated more urgent than those of the AIDS/HIV infected, the alcohol or drug addicted, or specific racial minorities. There appeared no clear opinion emerging from evaluation of need of housing for the homeless. One must emphasize that, given the wide disparity of need and economic conditions around the State, one local jurisdiction may have a severe need that is inconsequential in another.

**TABLE 1.35**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Rehabilitation of Old Rental Units	41	38	40	22	17	7	0	165
Acquisition of Existing Rental Units	27	32	32	34	15	11	4	155

Surveyed individuals were also asked about the degree of need for certain types of rental assistance programs. Besides details on homeowner or first-time buyer issues, review of the data provides insights into renter assistance programs. Table 1.36, above, presents an evaluation of the degree of need, by type of program.

As seen in the above table, all types of rental assistance are needed, as nearly all are considered in nearly extreme or extreme states of need. This question confirms the notion identified above, as it relates to the extreme shortage of rental housing. In further quantifying the degree of need for rental housing, Table 1.37, below, presents the reported vacancy rates in rental housing, by general geographic area. Note that as one moves from east to west, the incidence of rental vacancies declines.

With increases in population, declines in rental vacancy rates, and increasing needs for rental programs indicated, one may reasonably assume that affordably priced rental property is disappearing. Table 1.38, above, indicates what respondents feel has been the degree of change in rental prices since the 1990 Census was taken. But these statistics do not portray all the real problems being experienced in the State. Some areas have decaying housing stock, and declining rental prices. Table 1.39, also above, indicates the degree that rental prices have fallen. Note that there does appear a contrast between needs in the east and needs in the western portions of the State when viewing the data from this single perspective. None of the respondents indicated declines in the rental prices in the western portion of the State.

Table 1.40, below presents a summary of the reported rental prices, excluding local utility expenses, as reported by the respondents.

**TABLE 1.40**

3 Bedroom	288.33	386.54	412.00	487.10	430.36

For the survey of Montana's housing needs, respondents were asked to provide comment on several open-ended questions. The following presents a summary of these comments.

**QUESTION:** What opportunities for creating affordable housing in your area exist due to area market conditions?

**RESPONSE:**

Respondents indicated that few opportunities for creating affordable housing exist due to the area's market conditions. They felt that current county, city, state, and Federal organizations do not go far enough in alleviating the housing shortage in Montana. Further, the State needs to incorporate new programs and enhance existing ones to increase rental availability and home ownership. For example, a potential barrier to home ownership is the continuation in large single-family homes of elderly persons who may need assisted living conditions. By creating living space for elderly persons between total independence and nursing home care, many homes can become available as rentals or sale. Young families or larger families in need of more space would have the opportunity to buy or rent.

The high cost of land, lumber, construction make housing projects in Montana expensive. Most housing projects cost over \$100,000. One response taken from Montana's Housing Survey defines "affordable housing" with the value of less than \$100,000 for a home. Some Montanans feel that taxes and lack of investors in combination with limited lot availability contribute to Montana's housing problems. Taxes are reaching the point where some Montanans are having to move out of the area. Rental rates and resale values of a seller's

market do not make it feasible to build or repair existing older housing. The banks are willing to help since interest rates are low, but financing and property taxes alone are a burden. One suggestion offered related to freezing property tax or incorporation of a tax incentive which would increase private investors' and developers' interest to build.

In regard to single-family homes, the short supply of rental and multifamily housing have driven some area home prices up by 20 percent. Responses from landlords show a mutual feeling that many rentals already exist, but that the law of the State gives tenants too much authority making it costly for the landlords to collect rent or evict tenants. Therefore, the landlords are unwilling to invest in construction of new units. Instead, rent prices are increased, making available homes unaffordable because of low income. Interest rates are low, but the down payment and closing cost are excessive burdens to those looking to buy.

**QUESTION:** What barriers for creating affordable housing in your area exist due to area market conditions?

**RESPONSE:**

Land cost, lack of sites in close proximity to services, shortage of rentals, and development costs in outlying areas all represent barriers to potential construction of affordable housing. Lots that are available are too expensive due to scarcity. The majority of people who can afford the high prices are the newcomers who are bringing in the high dollar equity from the West Coast sales, thus pushing up the demand for local home sales, while inflating home values. The demand for good home sites exceeds the supply.

The number of rental vacancies is low while the high average purchase price of homes forces people to remain in rentals. Housing costs exceed the income level of most local prospective buyers. The majority of homes being built seems to concentrate on more expensive, larger, single-family homes -- especially for newcomers who are willing to pay higher prices. The direction that developers are taking makes it difficult for the elderly, single parents, and low-to moderate-income persons to find affordable housing.

Those who are able to find a house to rent or buy are often unable to afford it. Buyers find it especially difficult to finance a home with all the bank and government regulations and compliance issues. The limitations and/or restrictions on home ownership programs do not alleviate the high cost of housing for families on fixed incomes. The market condition and housing vacancy rates support persons who can afford to pay mortgage rates of \$650 or more. Without a loan, prospective buyers are unable to fulfill down payment requirements.

**QUESTION:** What organization or institutional barriers to affordable housing exist in your area?

**RESPONSE:**

The way in which institutions and organizations handle and develop funding priorities or criteria for selecting housing projects do not expand safe, decent, and/or affordable housing where it is needed. City, county, state, and federal resources and programs are not adequate in response and identification of housing problems. Most State program organizations lack the interest that is needed to initiate a program to deal with the housing issues. Programs tend to focus on affordable housing as what 80 percent of the median income can afford rather than those on AFCD, etc. Local governments lack fiscal assistance and commitment. There are no zoning incentives, or an affordable housing requirement. City zoning regulations prohibit and discourage mobile homes, in-fill, and multifamily development. Funds are lacking in the area of rehabilitation of existing homes. Most rentals are old and landlords do not reinvest or

maintain the interior or exterior of the structure. Taxes and sewer extension costs increase the building expenses outside city limits, where land is affordable and regulations are more "friendly."

**QUESTION:** What things might best facilitate solving your area's housing problems?

**RESPONSE:**

Any significant solution to facilitate the affordable housing crisis will involve all sectors of the State. Financing from local lenders is required for both the acquisition and development loans and the permanent financing for home buyers. The specific barriers such as the application process, financing, and zoning will need to be addressed both on the local and state levels. Local banks need to look beyond seeking just CRA credits. The development of affordable housing is a capital-intensive business, therefore, the issuers of debt must be willing participants. Affordable housing is the key element of local infrastructure. You must have affordable housing to maintain local jobs. The economy is unstable and jobs are important to investing in housing or upgrading existing homes.

Since home prices can't be lowered, a tax incentive or some sort of builder's incentive would boost the sales of family units within the HUD limit. To counterbalance, HUD should raise the area limit. County officials can promote and assist in allowing construction of rental units that rent for prices commensurate with local area residents' income. Rental and down payment assistance should be offered to facilitate low income residents and elderly adults with rental disabilities. A thorough assessment needs to be incorporated to address Montana's housing dilemmas in all categories.

**QUESTION:** Are there gaps in the delivery of programs and resources in your area?

**RESPONSE:**

Local governments are beginning to address the issue of efficiency of programs delivery and resources. HUD guarantees loans that can extend to \$75,500, but the average home selling price is \$114,603. Homes that are affordable (\$70-\$80,000) might not meet HUD guidelines. Non-profit organizations are over-extended in their ability to serve a population that is growing because of newcomers, and the private sector is slow to respond to the housing issues. Programs need to be administered with consistency and simplicity. The general public is not aware of the programs available and those programs that are available lag behind in demand and are too complicated. Some individuals feel program requirements are too time consuming and difficult.

The efficiency of programs is not the only resource that is failing. Transitional housing of any kind is lacking for homeless, HIV infected, handicapped, and drug and alcohol addicts. Most federal programs make it too difficult to apply because of match fund requirements for the project, thus ignoring smaller communities with less money and a smaller population. Programs and resources need to be fully available to all in the State of Montana.

## MONTANA HOUSING SURVEY

The *Montana Housing Survey* was designed to collect specific data from a randomly drawn sample of Montana citizens. The data related to housing conditions, inventory, cost, demand, needs for assistance, and suggestions as to preferred policy directions. Other household

and structure data, not yet completely analyzed, will be included in future releases of the CHAS. Most quantitative questions related to ranking the degree of need, or problem, being experienced in the local community.

Since the survey was drawn on a random sample, statistically valid generalizations can be made about the opinions of Montana's citizens, as well as about housing throughout the State. The sample selected was approximately 3,600 households; and, to date, about 1150 respondents have returned their surveys.<sup>20</sup> The following tables present preliminary results of the findings of the survey; more formal conclusions will be delayed until all respondents have had an opportunity to respond to the instrument.

One of the first issues requested related to type of general housing problems. In earlier CHAS documents, and several times herein, Montana has identified four basic problem areas related to its housing stock: availability, affordability, suitability, and accessibility. Prospective respondents were asked to categorize the severity of each problem as it relates to rental housing and owner-occupied housing within their local communities.

Table 1.41, below, presents a tabulation of the responses. Note that, consistent with other needs assessment activities, rental housing is considered critically short, with nearly 70 percent of respondents indicating extreme positions.

**TABLE 1.41**

OWNER OCCUPIED	1,008	8	16	28	168	206	394

<sup>20</sup> It is expected that, since follow-up letters were sent out near the end of September, 1993, additional instruments will be returned.

In regard to affordability, respondents indicated that rental and owner occupied housing was moderately to extremely expensive; respondents are heavily weighted toward "very expensive". In general, owner occupied homes fared better in suitability ratings, with a sharp peak of opinions at the middle. This implies a very large stock of homes that, while structurally habitable, appear to demand increased maintenance. Overall, Montana's stock of homes, both rental and owner occupied, have fairly significant accessibility problems.

The implications of these rates seem to indicate that Montana's need and want, more affordably prices homes, that the existing stock needs upgrading and rehabilitation, and that many more units need to be accessible to Montana's disabled.

The sample of randomly drawn citizens were also asked to rank the degree of need a set of in-need groups ten to have within their local communities. Table 1.42 presents the preliminary findings of this inquiry. All categories of in-need groups were classed a having at least some need; however, citizens leaned one way or another on each. In regard to the elderly, Montanans feel that there is some need, but respondents were weighted more toward higher levels of need, with over twice as many indicating severe need as no-need. While feelings related to the disabled are similar, fewer people had moderate feelings and grater numbers had extreme opinions related to no need and severe need. Here, opinion favors the higher level of need.

**TABLE 1.42**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Group	NUMBER OF RESPONDENTS							Total Respondents
	Severe Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Elderly	100	143	233	266	159	107	43	1,051
Mentally or Physically Disabled	120	143	212	229	116	126	81	1,027
Homeless	176	118	136	157	104	181	163	1,035
AIDS/HIV Infected	68	50	67	165	88	200	324	962
Alcohol or Drug Addicted	65	73	118	223	121	185	201	986

Opinions related to homelessness are not uniform; there are large numbers of opinions at either extreme and in the center. The precise reason for this tri-modal response has not yet been evaluated, but there may be geographic preferences yet to uncover. In regard to the AIDS/HIV infected group, opinions were quite strong that there was little, if any, need. While this type of response could be interpreted as bias, one must recall that the AIDS/HIV infection problem is very small in Montana and is dwarfed by other more visible social demands. A similar, though less extreme position, is evident in regard to the alcohol and drug dependent.

Respondents were also asked to classify the degree of need for a variety of housing programs. As in all previous assessments, more low rent rental units and affordably prices single family homes are considered as most important. Low cost group care for the elderly also appears to be favored by a majority of citizens. Each of these are present in Table 1.43, below.

**TABLE 1.43**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**DEGREE OF NEED FOR HOUSING PROGRAMS**

Type of Assistance	NUMBER OF RESPONDENTS							Total Respondents
	Extreme Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Repair and Maint Assistance	145	171	238	207	130	73	72	1,036
Rental Assistance	194	179	208	199	104	87	71	1,042
Construction of low-rent Rental Units	320	186	184	119	73	80	84	1,046
Rehabilitation of Rental Units	149	185	231	187	95	88	87	1,022
Rehabilitation of Single Family units	161	185	215	220	94	74	72	1,021
Low-rent Group care for Elderly	231	213	203	178	88	61	57	1,031
Assistance for mobile home owners	141	121	183	204	114	117	118	998
Construction of affordably single family units	322	237	156	136	72	61	58	1,042

Respondents were also asked to vote "yes" or "no" to whether building and zoning codes adversely affect the affordability of housing and the availability of housing in their local area. A majority indicated that neither type of public policy adversely affects housing. However, this piece of the survey needs to be evaluated on a substate basis, as in rapidly growing communities, such arguments surface very often; and very few counties have adopted zoning regulation. Furthermore, many counties in Eastern Montana Have little or not subdivision review and inactive or non-existent planning boards and staff. In the larger western towns, this is not the case.

#### MONTANA HOUSING OPINION SURVEY

Recipients of this survey were selected from professions dealing with housing and land use planning issues. The purpose of the survey was to obtain opinions from all interest groups involved in housing regarding what factors foster, or can foster, affordable housing and what factors act as barriers. At least one person representing the local government in each municipality and county was sent a questionnaire. All planners and administrators of housing rehabilitation and housing authorities were sent a questionnaire. Where a municipality or county was not represented by a planner or housing administration the mayor of the municipality or chairman of the county commission was contacted. In addition, a sample of one out of six bankers and all realtors and homes builders on the Comprehensive Housing Affordability

Strategy (CHAS) FY93 mailing list were contacted. A total of 320 people received the mailed surveys.

In addition to the Housing Opinion Survey, each local planner and housing administrator was mailed a second questionnaire intended to provide statistical information about the housing stock and the status of planning and land use regulation in the community. Ninety three surveys and 40 supplements were returned.

Survey recipients were asked their perception of the housing demand, supply, and the degree of interest by developers for providing housing for six categories of housing type in their community. Recipients were asked to rank the degree on a five point scale, with 1 the lowest and 5 the highest. Table 1.45, below, presents the results of the survey.

**TABLE 1.45**  
**RATED HOUSING DEMAND, SUPPLY, AND DEVELOPER INTEREST**

	Demand	Supply	Developer Interest
Low-cost housing to rent	4.3	1.4	1.8
Low-cost housing to buy	4.1	1.5	1.7
Avg-priced housing to rent	4.1	1.6	2.0
Avg-priced housing to buy	4.0	1.8	2.4
High-end housing to rent	2.8	2.0	1.9
High-end housing to buy	2.9	2.6	2.7

Table 1.45 shows that the demand for low-cost and average-priced housing, both for rent and for purchase is extremely high. The demand for high priced housing was considerably less. The supply of low-cost and average-priced housing was scarce on a statewide basis. Paralleling the lack of supply of housing is the respondents perception that developers have little interest in meeting the demand for low and moderate prices housing. The disparity between the demand for, and the supply of, low and moderate cost housing is dramatic.

Of all respondents, 64 percent reported both highest demand and lowest supply of affordable housing. There was little difference in demand between rental or owner housing, but the most severe disparity between demand and supply was in low cost rental housing. Of the respondents that reported d both high demand and low supply of low cost housing, 53 percent also reported that there is practically no interest by developers in producing low cost units. Only 23 percent of respondents reported equal supply and demand for high end housing, 16 percent for average price housing and 7 percent for low cost housing. Those reporting equal supply and demand for low and average cost housing were very small towns and communities the decline economies in eastern Montana. Over 55 percent of the respondents reported a rental vacancy rate near 0 percent. Those who reported available housing were, again, generally in eastern Montana and the Hi-line area.

Although there were exceptions, most respondents believe that high construction cost of housing, particularly the high cost of building materials, is a major factor that prevents low and moderate income families from obtaining affordable housing. High costs of land were cited

frequently, especially by realtors and builders. Many respondents indicated that lack of employment or low paying jobs in the community were the reason for low incomes that are insufficient to purchase or rent good housing. Most feel that meeting down payments and closing costs is a barrier for low income people. Because of low incomes, people are not able to meet credit requirements or other qualifying criteria.

Most respondents in all the occupations feel that developers are not trying to build low cost housing because of current strong markets in higher-priced housing coupled with the fact that low income housing provides a poor return on investment. A fairly commonly expressed factor was higher-income non-resident home buyers' willingness and capacity to pay high prices or rents is driving up housing prices in many areas of Montana.

Respondents in all occupations believe that lack of available land is a problem, although there is a difference in perception why land is not available. Some cited that fact that a community is surrounded by public land, tribal land, or by private land where owners are unwilling to sell for housing development. Other cite the need to extend city utilities, or that zoning did not provide enough available land, especially for multi-family and mobile home development.

Solutions commonly indicated by all occupations include providing more affordable financing, including rent and home subsidies, raising the limits on US Farmers Home Administration programs. Another fairly common solution is to provide assistance to builder and/or home buyers. Some respondents mentioned low cost loans, subsidies, or financing packages for developers of low cost housing.

#### STATE ADMINISTERED SECTION 8 HOUSING

An indirect measure of affordability and availability can be found by inspecting the Section 8 waiting lists. In Montana, the list was last prepared on September 30, 1993. Table 1.46, at right, presents the current number of households on the waiting list. This list, while last purged on July 7, 1993, is open at all times.

**TABLE 1.46**  
**STATE ADMINISTERED SECTION 8**  
**WAITING LIST**

Bedrooms	# on Waiting list
1 Bedroom	1,466
2 Bedrooms	2,831
3 Bedrooms	1,570
4 Bedrooms	178
5 Bedrooms	19
6 Bedrooms	3
<b>TOTAL</b>	<b>6,067</b>

Of those on the list, about 55 percent have one or more federal preferences. The complexion of the list is simply dependent upon those who apply. However, upcoming decline in the number of available certificates and vouchers is expected to alter the complexion of the waiting list. These new influences are anticipated to be from the fact that units are now linked to family self sufficiency and certificates and vouchers are now open to single person households. The latter is anticipated to swell the total waiting list to 10,000 households.

In FY 1992, the number of households on the waiting list amounted to 5,250. Therefore, between 1992 and 1993, there was a 16 percent increase in the waiting list. This implies that the housing market is not providing enough affordably priced rental property to adequately handle demand and household formation. This, in turn, leads to further pressure on rental prices.

Regrettably, as of October 1, 1993, Fair Market Rents (FMRs), the values upon which the level of assistance provided to renters under Section 8 Housing, were adjusted downward. Some of Montana's communities suffered significant declines nearly \$100 a month or more. Montana fears that this may contribute to risks of homelessness for many people; and, the State intends to track Section 8 tenants to determine if this risk bears itself out.

## SUMMARY

The *Survey of Montana's Housing Needs*, conducted during fiscal 1993, indicated several distinct problems and a variety of options for overcoming deficiencies in the provision of affordable housing.

In general, these findings can be summarized as a critical shortage of rental housing and a severe shortage of owner occupied homes. All income groups are adversely affected, with low income persons being placed in the most compromising circumstances. In-needs groups are scattered statewide, but the elderly and handicapped have the highest incidence of need. There tends to be a high level of unsuitable homes and rental property as perceived by the public.<sup>21</sup> As well, both rental housing and owner occupied homes are not very accessible for Montana disabled citizens. Further, the in-need groups are specifically the homeless, the elderly, and the mentally or physically disabled. Since the incidence of AIDS/HIV infection is relatively low in Montana, the public perceives little need for this type of housing and housing related services. However, within local jurisdictions, these needs can contrast sharply. Also, rental and home prices are increasing significantly, with building and zoning practices affecting housing availability in areas with faster growing populations and active subdivision and zoning activities.

Few opportunities exist today for increasing the provision of affordable housing, but many barriers exist. These barriers include land prices, material costs, population migration, and zoning regulations. Service gaps exist. These relate to programs that provide additional support to the in-need groups. These service gaps can generally be addressed through current delivery systems, albeit they are under funded.

The *Montana Housing Opinion Survey* confirmed the previous survey analysis. Rental housing is critically short throughout the State and owner-occupied homes are not affordable. Furthermore, developers are largely uninterested in providing low-cost housing, whether for-rent or for-purchase. Respondents indicated similar causes for some of the high cost of housing, such

---

<sup>21</sup> In general, Montana citizens take a more critical view of suitability than the CHAS definitions.

as building materials and land costs. Other indicators contributing to the lack of affordability related to low paying jobs, an inability to meet credit requirements, and an inability to save for down payment and closing costs. The survey respondents indicated that prospective solutions relate to low cost financing, rent and home subsidies, and assistance to builders and home buyers.

The *Montana Housing Survey*, the canvassing of randomly selected citizens, concurs with the above two needs assessment results. There are critical shortages of rental housing, severe shortages of affordably priced homes. There are significant needs for program support for the creation of low-cost rentals and affordably priced homes.

Even Montana's Section 8 waiting list concurs with the above, as over 6,000 are now on the list; it is expected to rise to about 10,000 over the course of the next couple of years.

## **PROPOSED ACTIONS ENHANCING PROVISION OF AFFORDABLE HOUSING**

### **CONSTRUCTION OF LOW-RENT UNITS**

There is a large demand for additional low-rent units across the State. The demand is urgent in Montana's seven major cities, but there are shortages in most rural areas of the State as well. Very low-, low-, and moderate-income Montanans are competing with upper income newcomers for the same stock of rental units. The increasing demand has depleted the affordable rental units. In those regions of the State favored by wealthy newcomers, many Montanans cannot afford year-round rental housing without a subsidy. This is particularly true for the western region of the State. The market is driven by the lack of units, and people are priced out of what once were low-cost units. Gentrification, upgrading of formerly low-cost older housing and the overall increasing demand for the existing rental stock, have contributed to the decreasing stock of affordable rental units in major cities. Vacancy rates are below 1 percent in Billings, Glendive, Great Falls, Helena, Kalispell, Missoula, Bozeman, and Park County. Rental prices have increased by more than 100 percent since 1988.

There has been almost no new rental construction in recent years, especially in major cities where Farmers Home Administration (FmHA) funds cannot be used (communities with populations in excess of 20,000). In many places, there are no vacant lots on which to build new units. Areas zoned for multifamily have already been developed. Zoning changes would be needed, but zoning has encountered significant problems from the "not in my backyard" syndrome.

New construction of public housing has decreased. Only five new units of fully subsidized public housing were awarded to Montana over the past three years, and those units were built in Missoula during spring 1993. All regions, except Sidney, have waiting lists for all sizes of publicly assisted units. The waiting lists for rentals indicate that the greatest need is for two-bedroom units. This is of particular concern in Billings, Bozeman, Great Falls,

Helena, Kalispell, and Missoula. Families requiring larger units (three or more bedrooms) wait longer for fewer units. While the waiting lists for larger units are not as long, the turnover rate is low, and large families remain on waiting lists for years.

Subsidized or unsubsidized, low-cost rental units simply are not available in the areas where there is the greatest demand.

### **CONSTRUCTION OF SINGLE FAMILY UNITS**

In much of urban Montana, there are not enough affordable single-family units to meet the demand or need. The influx of affluent newcomers has driven home prices up in Billings, Bozeman, Helena, Missoula, and Kalispell. Home ownership in those communities is becoming a luxury. Most homes are priced over \$100,000. Homes priced \$60,000 to \$100,000 are very difficult to find, and homes for under \$60,000 are practically non-existent. In Great Falls, houses are not available at any price. Neighborhood Housing Services was able to finance construction of five new houses by removing eight that had fallen down. There were 36 families on the waiting list before the project was publicly announced. The houses are running \$60,000 to \$61,500, but subsidies will buy them down to around \$40,000. In Kalispell, so-called starter homes are out of the grasp of most people as they start at about \$75,000. There are long waiting lists to get into houses. Families are moving in to take jobs, but there is no housing available. New homes in Missoula also start at about \$75,000. Habitat for Humanity has built three homes there, and plans to build two more.

Even parts of northern and eastern Montana are experiencing housing shortages. Chester has some single-family homes available, but they tend to be old and in poor condition. Some hospital employees are living up to 50 miles away. Glendive has lots of houses, but the vacancy rate is very low. There are 30 homes for sale and almost no homes for rent. In Miles City, realtors are calling homeowners every week asking if they want to sell. There is a demand for more expensive homes. There is a broad spectrum in town, but low-cost homes are in dangerous neighborhoods. Rents have not yet escalated. In Sidney, the market is tight for single-family homes, and prices are going up.

The picture is somewhat brighter in Billings and Butte. In Billings, there has been a 34 percent reduction in stock for sale. There are some homes being built now in most price ranges, but not enough to keep up with the need. There are homes available to rent and buy in Butte, but there is a gap in moderate priced homes, \$50,000 to \$60,000. Interviewees identified a need for low and moderately priced single-family units of up to four bedrooms.

### **REHABILITATION OF EXISTING LOW-RENT UNITS**

In most areas, the tight housing market has removed the incentive to build low-income units. For the most part, no new low-cost units are being built, and those units remaining as low-rent units are deteriorating. Many people are living in substandard units, or units in violation of fire and safety codes such as basement apartments without proper ventilation and

exits. The issue has gone beyond shelter to human safety, with many people putting up with what they can get, even in the face of self-endangerment.

Many of Montana's non-subsidized low-rent units are in substandard condition. This is especially true for rural areas where rental markets are less dynamic and rehabilitation financing is difficult to obtain. Most low-rent units and single-family units were built before 1940 and need major renovation like wiring and heating. For example, many units carry high utility costs for tenants. Electric heating systems can cost tenants an additional \$200 to \$300 per month in the winter months. Many of the units on the Fort Peck Reservation are substandard. They have used Comprehensive Housing Assistance funds to bring some units up to standard, but many more need rehabilitation.

### **REHABILITATION OF EXISTING SINGLE-FAMILY UNITS**

In several rural areas of Montana, older single-family units continue to deteriorate. Landlords are reluctant to rehabilitate units by incurring additional debts. Homeowners in rural areas often do not have enough income to maintain their homes properly. Rural communities and small towns generally do not have the resources to organize and operate effective rehabilitation programs.

The rural area around Butte has many homes in generally poor condition. Livingston has some of the oldest homes in Montana. In the old section of the city, 95 percent are more than 60 years old. They also do not conform to current zoning, being close together and right up next to the sidewalk. In one-third of the town, 77 percent of homes are substandard. In general, 80 percent of the stock is pre-1950; 56 percent of that is pre-1939.

According to the 1990 Census, 22 percent of the State housing stock was constructed prior to 1940. While age is not necessarily an indicator of substandard condition, the Montana Building Codes Bureau maintains that homes constructed prior to 1940 are more susceptible to deterioration of the foundation, inadequate roof support, and drainage problems. When families try to purchase these homes, they find that the homes do not qualify for federally insured mortgages because of their deteriorated condition. In addition, many single-family home dwellers experience higher energy costs because their homes are not properly weatherized.

Montana needs to rehabilitate rental properties and keep rents affordable. This will protect the housing stock and the tax base. For example, Havre used CDBG Housing Rehabilitation money and Section 8 rehabilitation funds for 30 units. They asked the banks to subsidize up to fair market value, then offered landlords a subsidized rental contract.

### **AFFORDABLE HOME OWNERSHIP OPPORTUNITIES**

Home ownership gives people pride, a sense of community, equity for the future, and a stake in maintenance. But, where there is no affordable housing stock available to purchase, home ownership opportunity programs can have little impact. Most urban Montana communities

are experiencing severe shortages of affordable single-family homes. As in the case of rental housing, low- and moderate-income home buyers must compete with middle and upper income home buyers for a relatively fixed number of units. In areas with high demand for more homes, there has been little new construction in recent years. Where new construction is taking place, particularly in Bozeman, Kalispell, and Missoula, most new units are for high-income buyers. Older units that are available within the price range for low- and moderate-income buyers often require substantial rehabilitation.

Where it might be a natural evolution for individuals and families to move from rental units into single-family homes, it is not always possible. Even in those cases where the monthly mortgage payment would be significantly lower than rental costs in a non-subsidized units potential buyers often lack the funds for a down payment and other closing costs. As noted above, qualified buyers--those who have the incomes to support home ownership--sometimes have difficulty finding qualified houses (i.e., those that meet FHA and VA guidelines).

### **REPAIR AND MAINTENANCE ASSISTANCE**

Elderly Montanans on fixed incomes, people with disabilities, and people with chronic illness often are unable to maintain their homes. They lack the financial or physical resources for normal repair and maintenance. As homeowners become unable to maintain their homes, the condition of the home worsens. Many of these homeowners prefer to remain in their homes and receive rehabilitation and maintenance assistance rather than live in low-rent units, assisted care facilities, or with other members of their families. The scarcity of low-rent or assisted care options often leaves them with limited choices.

Elderly Montanans constitute the largest single group of single-family homeowners. More than half (58 percent) of Montana's elderly population own homes. According to a recent study by the Governor's Office on Aging, 61 percent have lived in their homes at least 20 years. According to the 1990 Census, 62 percent of Montanans over age 60 live in rural areas, with the highest concentration in eastern Montana. There is a cost savings connected to lengthening the period of elderly independence. The biggest problem for the elderly is affordability of existing housing. Rising costs for maintenance and utilities become prohibitive for those on fixed incomes, even when the mortgage is paid off.

### **ASSISTANCE FOR MANUFACTURED HOME AND MOBILE HOME OWNERS**

For many Montanans, mobile homes represent one of the most available affordable housing alternatives. There are more than 54,000 mobile homes in the State, and officials estimate that between 114,000 and 160,000 Montanans live in mobile homes. There is a strong demand for mobile homes as a viable option for single-family home ownership. *In the last decade*, 79 percent of the increase of housing stock in Missoula was mobile homes. Lending institutions are seeing a rise in applications for mobile home financing since there are few other options. Financing applications have shifted from \$40,000 conventional homes (of which there

are none on the market) to \$20,000 mobile homes plus \$10,000 for land, wells, and septic systems.

Mobiles may be affordable on a square footage basis, but quality standards have not been comparable. In the past, poor planning and quality standards have caused mobile homes to deplete surrounding property values, cause traffic problems, over burden sewer and water systems, and constitute a health hazard. Mobile homes also are not subject to the same building code review as permanently constructed homes. There have been concerns about weatherization, structural standards, and ADA compliance. Although the homes themselves are affordable, many people do not have and cannot get the money to include the cost of the lot in their loans.

Use of mobile homes varies across the State. In some places, such as Havre, mobile homes constitute 30 percent of a community, and individual sites for mobile homes are plentiful, with existing mobile homes courts near capacity. There are not many courts in Chinook or Chester.

There is only one mobile home area in Livingston designated by zoning. There are many lots available on the east and north side. Most mobile homes are on 20 acre parcels with septic systems. Taxes are low, and the homes are in good shape. There is one mobile home park filled with pre-HUD standard trailers. Although most of the trailers are old, they are allowed on individual lots in portions of the city. Much of the area where mobile homes are allowed is in the flood plain, so it must first be surveyed, then elevated two feet above flood level. This adds significant additional cost for surveying and landscaping.

In Helena, living in a mobile home generally means living in the valley up to ten miles from town. Transportation becomes a problem, as does the high cost of utilities. Mobile home rentals are tight in Missoula. About 80 percent are in rural areas (so transportation is a problem). If they are available, the units are usually in poor condition. Because of the housing squeeze, demand is high, and so are prices. A four-bedroom double-wide mobile home rents for around about \$725, a two-bedroom single-wide for \$450. Spaces for mobile homes on lots are non-existent in Great Falls, Billings, Park County, Gallatin County, Missoula County, and Kalispell.

Use of mobile homes is declining in some parts of eastern Montana, where housing is not as tight. The four mobile home courts in Glendive are in decline, in the wake of the bust of the oil boom. People abandoned their mobile homes, leaving the banks to sell them as vacation homes to recover financing costs. Mobile homes are also in decline in Sidney, dropping from about 500 to less than 100 today. Renting a lot is expensive, and the total cost for a mobile home plus lot rental is approximately equal to the cost of renting a conventional home.

Mobile home accessibility is a problem because of size limitations. They are inaccessible for wheelchair users, unless they are custom made. Title III of ADA places new construction standards on mobile home manufacturers as well as new housing construction. Nationwide,

about 12 percent of physically disabled adults live in mobile homes. Mobile homes do provide an affordable ownership option. The Rural Institute on Disabilities is working on a research project in cooperation with the North Carolina Center for Accessible Housing to design accessible manufactured homes.

There is a desperate need for the affordable option manufactured housing provides. However, it appears difficult to develop new courts or individual spaces. The public image of mobile homes needs to be improved. Manufactured housing of today meets high standards for quality in both design and materials. For example, new electrically heated mobile homes manufactured for western Montana are now super-insulated under the Super Good Cents Program.

### **ASSISTANCE FOR SINGLE PARENT FAMILIES AND FAMILIES WITH SUPPORTIVE NEEDS**

There is a growing number of single head-of-household families, the majority headed by women. More particularly, 35,139 families with children, or 17 percent of all family households in the State, are headed by one parent. Of those, 75.6 percent are headed by single women and 24.4 percent by men. These families find few affordable units that provide supportive services. Many families on waiting lists are headed by one parent.

In the major cities, some PHA managers have noted that many of the families they serve need counseling, day care, chemical dependency programs, and employment assistance.

### **LOW-RENT CONGREGATE CARE FACILITIES FOR ELDERLY MONTANANS**

Congregate care facilities foster independent living while providing limited shared services such as meals, recreation facilities, and on-call medical services. The congregate care approach recognizes the elderly housing issues cannot be dealt with in isolation. For those elderly who do not wish to live in a nursing home but do require some assistance, congregate care facilities offer an attractive alternative.

The need for more units of congregate care appears to be specific to particular areas of the State which serve as retirement centers. For example, Missoula is becoming an attractive area in which to retire because of its excellent health care and the cultural and educational activities of the university. Other communities which identified the need for more congregate care facilities include Butte, Glendive, Wibaux, Great Falls, Havre, Kalispell, and Wolf Point. Elsewhere in the State, the need is for adequate funding of existing units, and the provision of a more comprehensive range of housing and care options for the elderly.

## **HOUSING FOR DISABLED PERSONS AND THOSE REQUIRING SUPPORTIVE SERVICES**

As housing has become more scarce and less affordable, people with disabilities have joined many others on waiting lists for low-cost rental units and other subsidized units. Disabled accessible units that are not subsidized are usually more expensive because of the increased square footage required for wheelchair accessibility and other modifications.

The primary concern for disabled people is accessibility. Many of the units in the State were constructed without adequate accessibility. Many disabled people requiring disabled accessibility would prefer to remain in existing homes or apartments. These units often require renovation for access. Usually, disabled people do not have the income to pay for the necessary renovation and for the removal of the renovations (as required by the ADA), should they move elsewhere. As a result, many disabled people are living in units that do not meet their basic needs for accessibility.

The need for accessible units is compelling across the State. In Great Falls, the Mobility Impaired Task Force has been trying for two years to get funding to build 24 units. Missoula is rapidly becoming a regional center for disabled people, as it offers strong medical and rehabilitative services. Missoula succeeded in building these 24 units of mobility-impaired housing in the summer of 1992. It was full within six weeks of opening, and now has a long waiting list. Given the shortage of affordable accessible units, young adults with disabilities tend to live at home. Again, remodeling to fit their needs is prohibitively expensive.

Over the past twenty years, Montana has deinstitutionalized many people with mental illness or developmental disabilities. Group homes have been established in some areas to help meet the needs of the developmentally disabled. In Helena, this housing is extremely limited. Little corollary effort has been made to secure housing for the deinstitutionalized mentally disabled. Particularly in those areas where housing is tight, the mentally disabled are forced to compete with all the other low-income populations for scarce housing and housing assistance.

An additional requirement of the Americans with Disabilities Act is "reasonable accommodations." Problems may arise as to the extent services are needed, expected, and legally required. This consideration could dissuade landlords or developers from accepting people with disabilities.

### **B.1.B ESTIMATES OF VERY LOW, LOW, AND MODERATE INCOME NEEDS** **i. ESTIMATES OF NEED BY VERY LOW-INCOME HOUSEHOLDS**

There are nearly 40,000 households throughout the State that are considered very low income renters; another 75,000 households are very low income homeowners. The two income groups, make less than 50 percent of the State's median family income, or half of \$28,044. Of the low-income renters, nearly 10,000 are elderly one and two member households, over 13,000 more are small related households, and another 3,300 are large related households. Of

homeowners, 17,150 are elderly. The majority of these groups have some sort of housing problem. In particular, for Montana, these households make less than \$14,000 per year and are having difficulty with locating affordable housing that is suitable for habitation.

## **ii. ESTIMATES OF NEED BY OTHER LOW-INCOME HOUSEHOLDS**

For the other low-income household category, far fewer households are categorized here. There are about 21,250 renter households and 56,000 owner-occupied households. Of the renters, 3,400 are elderly and nearly 2,000 are large families. Of the home owners, 14,000 are elderly. This groups also is having difficulty locating affordable housing that is suitable for habitation.

## **iii. ESTIMATES OF NEED BY MODERATE INCOME HOUSEHOLDS**

There are about 8,400 renter households with incomes 81 to 95 percent of the State's median family income. Of these 904 are elderly and 784 are large families. However, 27,033 of Montana's households fit moderate income classification and are homeowners. Twenty-five percent of the large family renter households are experiencing housing problems; and 25 percent of all the "all other owners" classification are experiencing housing problems.

## **iv. SUMMARY**

Of the 306,919 households in Montana, 45 percent of the large family renters were having housing difficulties during the 1990 Census. Of the elderly homeowners, 66 percent are having some form of housing difficulty. Overall, 75 percent of all Montana's households make less income than the national average median family income of about \$36,000.

# **B.1.C. CLASSIFICATION OF MONTANA'S HOUSING REQUIREMENTS**

Montana's housing needs fall into four broad categories: availability, affordability, accessibility, and suitability. Within these categories there is widespread need for construction, rehabilitation, expansion, financing, ownership opportunities, demolition, and coordination and continuity. Each is defined below.

## **HOUSING AVAILABILITY**

Lack of available housing is the major statewide problem. In many parts of the State, there is nothing available. Housing is extremely tight, and what is available is often substandard. Despite census numbers to the contrary, Montana's major cities are experiencing a dramatic population influx that is driving up the demand for housing.

In Kalispell, Missoula, Bozeman, Helena, and Billings, that influx is comprised of higher income households. In those areas, the available housing stock is near zero vacancy rate.

People who can afford housing are willing to settle for low-rent units while awaiting better opportunities; but this forces low-income residents to loose housing options. This activity increases the incidence of homelessness because households can no longer afford housing. Furthermore, the only housing being built is up-scale and profitable. Little, if any, affordable housing is being built. Complicating this issue is that there has been a slow down in the turn-over of existing subsidized housing. It is difficult to find any housing, particularly housing affordable to the low- and moderate-income population.

## **HOUSING AFFORDABILITY**

While affordability varies significantly around the State, it is a bigger problem in the more urbanized areas; the tight market and general lack of housing stock have pushed prices up. Now there is a huge gap between housing prices and what people can afford to pay. The crisis is particularly acute in several Montana communities that have experienced rapid growth over the last two or three years.

Missoula's situation is representative of cities and towns in the western half of the State. Section 8 landlords are increasing rents at annual review, citing prevailing market rates, tax, and sewer increases. Some are simply leaving the program, citing three main reasons: (1) HUD certificates limit annual rent increases; (2) certificate participants cannot pay more than 30 percent of their income, thereby effectively limiting further certificate use; and (3) voucher participants cannot afford to pay the increased amount over and above the voucher. Rent for an average two-bedroom unit had increased 22 percent from April 1990 to April 1992, before the July 1992 cycle of rent increases.

Data from other communities confirms this picture. Units on the south side of Billings have gone from \$250 per month to \$400 per month in the last year. In Kalispell, new housing requires 50 percent of an average person's \$27,000 in gross income. In Livingston, housing was basically affordable until 1992, after which rents rose. Today they tend to be double the 1992 amounts. A critical shortage is developing. A significant number of people are paying more than 30 percent of their income; statewide, it is difficult to find an apartment that is affordable for a family with an income of \$10,000.

## **HOUSING ACCESSIBILITY**

Because of the Americans with Disabilities Act (ADA), housing accessibility has become a visible need across the State. Accessibility is a problem unless the unit was specifically built for people with disabilities. Modification of existing rental units is difficult to accomplish and the modifications must be removed and the unit restored to its original condition when the disabled tenant leaves. Most people with disabilities cannot afford to do this, and landlords are often unwilling to incur long-term expenses for prospectively short-term tenants. Resolution of this issue presents a challenge for all involved.

## HOUSING SUITABILITY

Outside Montana's metropolitan areas, a major problem pertains to dilapidated housing. Although many people live in their own homes, incomes are not high enough to maintain their homes. In Havre, the major problem for all groups is quality, affordable, and decent housing. Affordable rental housing is available, but it is not in good condition. In Harlem, nearly all existing housing is in poor condition. In Park County, most available houses are also in poor condition. Many of these homes are 100 years old, built on sandstone foundations, have out-of-date wiring, use gas venting chimneys for wood stoves, and are poorly insulated.

In these areas, lack of return on investment is the major problem for landlords of housing that needs rehabilitation. Landlords do not want to lose their present tenants. They cannot borrow money and incur debt when they cannot afford to dislocate tenants or raise the rents to meet their debt service.

## SUMMARY

Each of the above issues have pointed to the extreme need for affordable housing. First time homebuyers are having extreme difficulty purchasing a home, due to low pay and high home costs. Down payments make the step to homeownership difficult, if at all possible. CHAS Table 1C, presented on the following page, offers a tabular assessment of Montana's Current need for housing.

## FIVE YEAR FORECAST ECONOMIC, DEMOGRAPHIC, AND POPULATION STATISTICS

The following discussion addresses a forecast of employment and earnings by industry, unearned income sources, population by age and sex cohorts, and household formation annually through the year 2015. While presented here at the State level, all Montana's fifty six counties have similar annual forecast data; and, for the purpose of assisting local jurisdictions with planning issues, the county level economic and demographic forecast is available in similar form from the MDOC.<sup>22</sup> The data presented herein is in tabular form, in Tables 1.46 through 1.51, and presented below.

Statewide, employment growth is expected to slow, falling from a 1.8 percent growth rate between 1967 and 1992 to a 1.2 percent rate of growth over the 1992 through 2015 period. This slower growth still has employment rising to nearly 600,000 by the year 2015. Employment in the agricultural sector continues falling, shedding some 5,000 jobs over the period. The largest percent employment expansions will come from increase in retail trade, finance-insurance-real estate, and services. However, these wage sectors are typically some of the lowest paying sectors. For example, retail trade workers made \$12,970 in 1967, but by 1992 this had fallen in real terms to less than \$10,000. In finance-insurance-real estate, wage earners average \$15,971 in real terms in 1967, but this has fallen about 30 percent, to \$10,601 in real terms by 1991. Persons who may remain employed in these lower paying sectors will continue to face difficulties affording adequate and suitable housing; furthermore, no appreciable growth will occur at all in manufacturing employment and extremely modest rises in mining employment. The traditionally higher paying industrial jobs will not keep pace with overall employment growth.

On the other hand, wage and salary income will rise over the forecast horizon, due to rising productivity and the disappearance of recessionary pressures. Earnings alone will increase from 7.4 billion in 1992 to nearly 12 billion (real 1987 dollars) by the year 2015. Average real earnings per worker will increase over the forecast horizon; but, as noted above, the distribution of earnings will not be equitably distributed over the economy. The net results indicate that per capita income will rise from about \$14,000 in 1992 to over \$18,600 (real 1987 dollars) by the year 2015. On the surface, it would appear that with greater rates of pay, affordability may ease somewhat.

Statewide population will continue to rise, placing pressure on the housing market. Population is expected to increase from about 824,000 in 1992 to about 866,700 in 2000, and to 956,000 by 2015. Furthermore, household formation will rise by nearly 77,000, with the

---

<sup>22</sup> Data has been provided by the Census and Economic Information Center (CEIC). Historic data, comprising the years 1969 through 1991 are from the US Department of Commerce, Bureau Economic Analysis, Regional Economic Information System. The most recent two years of this data is revised annually, with new benchmarks every five years; 1993 is a benchmark year. Forecast data was purchased by the CEIC from the National Planning Association, Data Services, Washington D.C. (NPA). This is their August 1993 forecast. The NPA forecast is revised twice annually. CEIC's subscription is for annual revisions; this forecast was released in May, 1993. The CEIC can provide additional data pertaining to each county in the state of Montana and may be contacted by calling (406) 444-2896.

steepest rises occurring within the 1992 through 1998 period. Diagram 1.12, at right, portrays the household forecast. As seen, another 25,000 housing units must come into the market within the next five years. If some parts of the population receive higher wages, prices will tend to follow demand. Those individuals without higher paying job skills will continue to face worsening housing affordability problems.

#### ANTICIPATED CHANGES IN NEED

Montana does not see new housing needs arising over the forecast horizon. However, the degree of need for those who are unable to ride the prospective economic upswing will fall increasingly into housing stock that may have environmental hazards, may be unsuitable for adverse weather conditions, or may be overcrowded.

Current economic and housing market conditions favor middle to upper income households, where the purchase of single-family homes is strong and construction activity is good. Low- and very-low-income households are experiencing the lower quality housing, are more crowded in their homes, face greater chances of having lead-based paint hazards, and see significant affordability problems. Market conditions are impeding the formation of affordable home ownership opportunities and are not generating sufficient rental housing to alleviate problems faced by renters. Low income large families face overcrowding a majority of the time in several local communities. The needs of these low income groups remain unmet.

While near-term employment and population forecasts predict some slowdown in job growth and population in-migration, releasing some pressure on the housing market, current affordability problems will persist or worsen into the future for both first-time homebuyers and renters. Currently, affordability problems are faced by large, low-income families, all other low-income households, and all renter households.

Without significant market intervention, the direction of the housing market may pass by current in-need groups. These groups will therefore continue to go without affordable housing and may face increasingly difficult, overcrowded, unsuitable, or hazardous housing conditions. Economic theory suggests that market intervention actions that produce additional affordable home ownership opportunities or increase the supply of affordably priced rental properties will dampen the rising degree of need for affordable housing in the State.

## 2. NATURE AND EXTENT OF HOMELESSNESS IN MONTANA

### SUMMARY OF SHELTERED HOMELESS STUDY

Graduate students in the Department of Political Science at the University of Montana, Missoula, prepared a study for the Department of Social and Rehabilitative Services on a portion of Montana's homeless population, the sheltered homeless. The study, completed in May 1993, attempted to count sheltered homeless people in the State. Those living on the street, in institutionalized settings, or doubled-up with friends or relatives in existing housing were not included. The study attempted to provide demographic information on sheltered homelessness, and identify their needs and the services available to Montana's sheltered homeless.

It was conducted by taking a physical count on two separate nights, December 2, 1992, and January 26, 1993, at 40 specified shelters. The study targeted 17 emergency shelters, seven domestic violence shelters, eight runaway youth shelters, and eight voucher systems. Few of the shelters were in northeastern Montana, and none in the southeast. Most surveyed shelters were located in urbanized areas (six in Billings, five in Missoula, and five in Bozeman).

The study concludes that approximately 502 homeless persons seek shelter each day during December and January. It reported that the December count included 548 persons requesting shelter; 461 did so on the January date. On each night, 16 people requesting shelter were turned away, two from the emergency shelters, 14 from runaway youth shelters. Shelters turned away homeless people primarily due to lack of space, and secondly due to behavioral problems. A majority of homeless people (352) are served by emergency shelters, while 70 stayed in domestic violence shelters, 41 in runaway youth shelters, and 23 utilized the shelter voucher system.

A survey instrument completed by the shelter directors asked for information related to age, sex, race/ethnic origin, and family status of shelter clients. The mean age of sheltered homeless persons in Montana is 26 years. Individuals under the age of 19 made up 43 percent of the total sheltered homeless population, with a majority of that group under age 9. Sixty-one percent of sheltered homeless individuals are male, 39 percent female. Females make up a majority only in domestic violence shelters with 67 percent (47 of 70 people). Adults between the ages of 20 and 49 represented 48 percent of the sheltered homeless population, most in their 30s. Only 9 percent of the homeless were over age 50.

Native Americans are disproportionately represented in the studied homeless population. They constitute 24 percent of the sheltered homeless population, yet they make up only 6 percent of the total statewide population. Whites represented 72 percent of persons in shelter facilities.

Additional information about the homeless in Montana was collected by the University through two questionnaires: the first was distributed to directors and asked their opinion of the make-up and needs of their patrons; the second was offered only to emergency shelter clients with response voluntary. According to the shelter directors, the average length of stay at a

shelter ranged from 8 to 20 days; clients stayed longest at domestic violence shelters, ranging from 20 to 37 days. Those using vouchers typically remained only 1 to 5 days.

Shelter directors indicated that the major reasons for an individual's or family's homelessness varied. Sometimes several factors conspired to force the person or household into homelessness. Table 1.53, below, presents the shelter directors' opinions of the percent of their clients citing the following major reasons for their homelessness.

**TABLE 1.53**  
**DIRECTORS' ESTIMATES OF REASONS FOR HOMELESSNESS<sup>23</sup>**  
**PERCENT OF CLIENTS HAVING FOLLOWING REASONS**

REASON CLIENT SEEKING SHELTER	ALL RESPONDENTS	DIRECTOR'S OPINIONS BY TYPE OF SHELTER			
		EMERGENCY SHELTER	DOMESTIC VIOLENCE	RUNAWAY YOUTH	VOUCHER SYSTEM <sup>24</sup>
Domestic Violence	34%	23%	100%	33%	3%
Lack of Job Skills	27%	33%	0%	2%	54%
Substance Abuse	23%	32%	13%	5%	26%
Can't Find Affordable Housing	20%	34%	10%	0%	13%
Deinstitutionalization	7%	11%	0%	4%	6%
Runaway Youth	6%	2%	0%	29%	0%
Public Assistance Problems	6%	13%	0%	0%	1%
Other	14%	8%	0%	24%	26%

Domestic violence was most commonly cited by the shelter directors as the reason for homelessness, but job skills, substance abuse, and affordable housing followed closely. Respondents cited deinstitutionalization, public assistance, problems, other difficulties, and runaway youth less frequently as the reason for their homelessness. Note, however, that some shelters do not take in runaway youth. A similar question was asked of homeless adults at emergency shelters in the voluntary questionnaire. While the data is restricted to a single dimension, this segment of the homeless population provided interesting information. Table 1.54, below, presents emergency shelter client responses.

<sup>23</sup> Percentages may not add to 100 percent due to reasons for homelessness; multiple responses were allowed in the survey.

<sup>24</sup> Includes those facilities that offer food, clothing, and other basic necessities but do not operate a shelter of their own. Rather, they administer vouchers to homeless people so they can receive shelter at places such as local motels.

**TABLE 1.54**  
**REASONS HOMELESS PERSON LEFT LAST RESIDENCE**  
**EMERGENCY SHELTER CLIENT RESPONSES**

REASON	# at EMERGENCY SHELTER	% at EMERGENCY SHELTER
Unemployment	18	23.68%

Substance Abuse	5	6.58%
Eviction/Foreclosure	5	6.58%
Low Wages	4	5.26%
Family Rejection	4	5.26%
Inadequate Public Assistance	4	5.26%
Domestic Violence	2	2.63%
<b>TOTAL RESPONSES<sup>26</sup></b>	<b>76</b>	<b>100.00%</b>

#### i. NEEDS OF SHELTERED AND UNSHELTERED HOMELESS

As stated in the SRS study, homeless adults are more likely to identify economic-related reasons, such as unemployment or moved to seek work, as the cause of their homelessness. Unemployment in the homeless questionnaire translates to 'job skills' in the shelter director survey. Substance abuse was rated as a less frequent cause by this type of respondent, while domestic violence was rated lowest by shelter clients. The difference between the two tables can be attributed to the limitation of the shelter client survey; it was available only to clients of emergency shelters. Therefore, Montana's homeless are primarily in need of long-term job training and counseling. Transitional housing, permanent housing, and employment were also cited as in great need by shelter directors. Their immediate needs relate to affordably priced permanent housing, medical health services, food, and clothing.

It is important to note that not all homeless persons were able to locate shelter during the SRS count of homelessness. During both counts, sixteen persons were turned away. All of these persons were youth, some with behavioral problems and others who may have gone to a shelter that was unable to take them. Therefore, runaway and homeless youth appear to require additional facilities and special counseling. Needs are identified in CHAS Table 1D, below.

#### SERVICES TYPICALLY AVAILABLE

According to shelter directors, emergency shelter, food, mental health, medical health services, clothing, and help for substance abuse are typically requested and often available. Education, job training, and disability services were listed as seldom to moderately available by respondents. But sufficient funding to adequately respond to client needs is not usually available at the facilities. In particular, more stable funding sources for services that can aid the home to prepare for transitional or permanent housing are required.

<sup>25</sup> Several responses were mental illness.

<sup>26</sup> This may not equal the total number of persons responding to the question as they were asked to check all that may apply.

\*\* Sources do not report on unsheltered population.

## ii. NEEDS OF SUBPOPULATIONS AND PERSONS THREATENED WITH HOMELESSNESS

As households make less money, their likelihood of being homeless increases. Hence, the very low income households are particularly vulnerable to increases in the unemployment rates, economic fluctuation and slowdown, and public policy issues.

It is of particular concern by MDOC that since assisted housing payments under Section 8 will be constrained, as of October 1, 1993, additional very low income persons may be a risk for homelessness. MDOC and SRS intend to track the capabilities of persons who may fall away from Section 8 assisted housing and become homeless, as this service gap created by Federal policy has direct implications on other forms of assistance programs.

Montana views this group of people in need of financial and personal counseling, job training (or retraining) and short term emergency services and supplies, such as food, relief from energy and other utility costs.

## 3. POPULATIONS WITH SPECIAL NEEDS - OTHER THAN HOMELESS

### i. NEED FOR SUPPORTIVE HOUSING

The housing component of the Montana State Mental Health Division (Residential Services) includes the state's two mental health institutions: Montana State Hospital and the Montana Center for the Aged. One of the major emphases in the Montana Public Mental Health System Plan regarding the State Hospital is recognition of the need for improving the process of transition for patients going from the hospital to the community. This goal is outlined in the Public Mental Health System Plan:

The process of patient discharge planning at the hospital will be reviewed and updated. Formal discharge planning for each patient will begin at the time of admission to the hospital and will involve staff members from the hospital and the community mental health center that serves the patient's home community. This will help to identify the components of hospital treatment that will be important in helping patients prepare for a successful return to their home community. It will also help to identify the service and supports that patients will need upon discharge from the hospital.

In addition, several hospital staff members will be designated "aftercare coordinators" and will be responsible for developing and updating an aftercare plan for each patient assigned to them, in conjunction with staff members from each region's community mental health center.

The mental health plan identifies an ideal system of community services for adults with severe and disabling mental illness. Housing for the mentally ill, one of the strategy areas, calls for the continuation of the 100 beds in group homes, and the addition of three group homes for mentally ill elderly persons (eight beds). The plan proposes building nine, one-apartment transition beds, and payment of rental cost for apartment managers at these sites. Emergency funds for 200 persons will be made available to assist clients with rent deposits, furnishings, and emergencies. A department staff person will be assigned to provide technical assistance in

housing the mentally ill. These plans go along with the Mental Health Division's goal of encouraging the provision of supportive services in the "least restrictive, most natural and least disruptive setting possible."

Montana's Older Americans Act (1987) reaffirms the State's commitment to its older citizens. The act described older Montanans as a valuable resource that it is not receiving sufficient services in all areas of the State. The plans laid out in the act are to develop appropriate programs, coordinate and integrate all levels of service, create a directory of available services and transportation to them, programs to facilitate self-care, physical and mental health care, legal programs, adult education, and research in aging.

The organizer of elderly assistance is the Governor's Office on Aging, established in 1983. They are responsible for developing and administering the State's plan on aging, develop an intrastate funding formula, represent the interests of the elderly in State legislative and regulatory bodies, and evaluate Area Agency on Aging activities.

While there are other segments of the in-need populations, such as the AIDS/HI infected persons or those with alcohol or other drug dependence problems, and the State plans to distribute funds to these groups, funding levels are in line with the relative size and severity of the problems in Montana. CHAS Table E, on the following page, presents all available data as it pertains to the Non-Homeless Special Needs Populations.

While the State has about 140,000 persons over the age of 60, about 12,993 of these persons require assistance, in some form, for housing. Of those, 3,267 are estimated to be frail elderly.

## Non-Homeless Special Needs Populations

Comprehensive Housing Affordability Strategy (CHAS)  
Instructions for States

Name of State or Sub-State Area: Montana	Data Source: (specify) ----- Current Data as of (date)	Five Year Period: (enter fiscal yrs.) FY 1994 through FY: 1998
1 Elderly	Households in Need of Supportive Housing 12,993	
2 Frail Elderly	3,267	
3 Severe Mental Illness	NA	
4 Developmentally Disabled	1,067	
5 Physically Disabled	NA

7 Persons with AIDS and Related Diseases	15 (estimate)	
8 Other (specify):		

## Instructions for Table 1E

## Non-Homeless Special Needs Populations

Refer to Appendix A, General Definitions Used with the CHAS, for additional definitions of terms used in this table.

Table 1E provides a format for estimating the need for supportive housing for other (than homeless) populations with special needs. Some potential resource agencies and client groups they serve include:

- o State or local mental health agencies for persons with severe mental illness;
- o State or local agencies of mental retardation or State local developmental disabilities councils for people with developmental disabilities;
- o State rehabilitation agencies or State or local Centers for Independent Living for people with physical disabilities;
- o State or area agencies on aging for elderly people;
- o The Public Health Service Center for Disease Control for persons with AIDS

## Specific Instructions

Line 1-- Enter the estimated number of elderly households in need of supportive housing

Line 2-- Enter the estimated number of frail elderly households in need of supportive housing.

Line 3-- Enter the estimated number of households composed of at least one person with severe mental illness in need of supportive housing.

Line 4-- Enter the estimated number of households composed of at least one developmentally disabled person in need of supportive housing.

Line 5-- Enter the estimated number of households composed of at least one physically disabled person in need of supportive housing.

Line 6-- Enter the estimated number of households composed of at least one person with alcohol/other drug addiction in need of supportive housing.

Line 7-- Enter the estimated number of households composed of at least one person with AIDS and related diseases in need of supportive housing.

Line 8-- Estimate for any other category of special need that the jurisdiction may identify the number of households in need of supportive housing.

## C. AVAILABLE RESOURCES

The State of Montana has a wide array of programs it intends to implement, deliver, or manage throughout the upcoming five-year period. These are briefly reviewed below. The arrangement within each category does not imply any priority the program may be given by the State. The program descriptions are then followed by a discussion of activities to be undertaken, by activity type.

### C.1. FEDERAL PROGRAMS

#### HOME Investment Partnership Program

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The purpose of the program is to expand the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdiction, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include

- Tenant-based rental assistance;
- Assistance to first-time home buyers;
- Property acquisition;
- New construction (justification required for neighborhood revitalization, special needs);
- Reconstruction, relocation, or demolition;
- Moderate or substantial rehabilitation;
- Site improvements;
- Conversions;
- Tenant based rental assistance; and,
- Other activities related to development of non-luxury housing (with approval of HUD).

All States, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

## Community Development Block Grant Program

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income facilities to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

### **HOPE 1 (Public Housing Homeownership) Program**

The HOPE 1 Program is to assist in providing affordable homeownership for residents of public and Indian housing. HOPE 1 funds are available in three forms: planning grants and implementation grants. Eligible activities for planning grants include:

- replacement housing;
- development of resident councils;
- counseling;
- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

The maximum planning grant amount is \$200,000, and it does not require matching funds. Mini planning grants are available.

With implementation grants, a grantee can fund

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities; and
- administrative and operating costs.

Implementation grants support the cost of developing the housing. There is no cap on overall grant amounts, but some eligible activities are capped. This type of grant requires non-federal matching funds. Both grant types are awarded on a competitive basis.

Resident management corporations, resident corporations, cooperative associations, public or nonprofit organizations, public bodies or agencies, Public Housing Authorities, and Indian Housing Authorities are eligible to apply for HOPE 1 grants.

*Contact person: HUD-Denver, Office of Public Housing (303) 844-4762.*

## **HOPE 2 (Homeownership of Multifamily Units) Program (Title IV)**

The HOPE 2 program was authorized in subtitle B of Title IV of the National Affordable Housing Act of 1990. Program funds are to be used to assist in developing homeownership opportunities for low-income persons by providing planning and implementation grants to organizations that will help families purchase and maintain units in multifamily projects. The projects must be owned by the government, FHA-distressed, or subject to mortgages that are insured or held by HUD. Resident councils, resident management corporations, cooperative associations, mutual housing associations, public or private nonprofit organizations, public housing agencies and Indian housing authorities are eligible to apply. Joint applications may be submitted. Grants are awarded competitively. Planning grants can be no more than \$200,000, while mini planning grants may be only \$100,000. They can be used for:

- development of resident councils;
- counseling;
- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

Implementation grants must be matched with non-federal funds that are at least 33 percent of the grant amount. The maximum implementation grant is based on the present published Section 8 Existing Fair Market Rents over a 10-year period. These grants can fund:

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities;
- administrative and operating costs; and
- acquisition.

*Contact person: Lois Tressler, Office of Housing, HUD-Denver Regional Office (303) 844-4959.*

## **HOPE 3 (Homeownership of Single Family Homes) Program**

HOPE 3 provides financial assistance for homeownership. Planning grants may be used for feasibility studies, technical assistance for grant recipients, researching the availability of properties, preparing applications for implementation grants, and program planning. HOPE 3 implementation grants may be used for the following:

- acquiring and rehabilitating property;
- assisting first-time home buyers in purchasing units;
- economic development to promote self-sufficiency of home buyers;
- administrative costs;
- replacement reserves; and
- home buyer outreach selection and counseling.

Eligible sources for housing are single family residential properties currently owned or held by HUD/FHA, VA, RTC, FDIC, DoD, GSA, DoT, FmHA, all other federal agencies, and state or local governments (including their agencies).

HOPE 3 eligible applicants include private nonprofit organizations, public agencies, cities, states, counties, and PHAs or IHAs in cooperation with a private nonprofit or cooperative association. Grants are awarded competitively: planning grants within a national pool, implementation grants in a regional pool. Planning grants cannot exceed \$100,000; implementation grants must be under \$3 million.

*Contact person: David Jacops, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **HOPE for Youth (YOUTHBUILD)**

The HOPE for Youth program was created as section 164 of the Housing and Community Development Act of 1992, which added it as a new subtitle D to the 1990 National Affordable Housing Act. Under YOUTHBUILD, the energies and abilities of youth who have dropped out of school or are in danger of dropping out would be utilized to develop permanent and transitional affordable housing for low-income families and the homeless, and to reconstruct urban neighborhoods. The program is geared toward young men and women aged 16 to 24. It provides academic and basic skills in preparation for a high school equivalency diploma and construction trades training. Half of the youth's time will be spent working and the other half would be spent in the actual construction or rehabilitation of housing under the supervision of trained and licensed construction workers. Regulations for this program are still being written.

### **Low-income Housing Preservation and Resident Homeownership Program (Title VI)**

The Low-income Housing Preservation and Homeownership Program was authorized in Title VI of the National Affordable Housing Act of 1990. The program provides competitive grants to assure the continuation of Section 221(d)(3) and Section 236 projects, whose low-income use restrictions could otherwise expire after 20 years of the final mortgage endorsement. The grants are financial incentives to retain project-subsidized housing projects, and to encourage sales to purchasers who will keep the property for low-income persons. Resident corporations, owners of low-income housing, nonprofit organization, state or local agencies, or any entity that agrees to maintain low-income affordability restrictions may apply for funding.

### **Shelter Plus Care Program**

Shelter Plus Care grants help to provide housing and supportive services on a long-term basis for homeless people with disabilities, especially serious mental illness, chronic drug or alcohol problems, and AIDS. Program grants are used for the provision of rental assistance payments through Section 8 Moderate Rehabilitation (SRO), sponsor-based rental assistance (SRA), tenant-based rental assistance (TRA), or project-based rental assistance (PRA). HUD requires that 10 percent of total funds be made available for each of these four program types.

S+C funds are awarded in a nationwide competition, with priority given to homeless needs. States, units of local government, Indian tribes, and Public Housing Authorities can apply for Shelter Plus Care (S+C) grants. Support services must match rental assistance and must be supplied by federal, state, or local governments; or private sources.

Non-PHA applicants applying for the SRO component must subcontract with a PHA to administer the rental housing assistance. Applicants for the SRA must subcontract with a nonprofit organization, also called a sponsor, to provide rental assistance to sponsor-owned or leased units. PRA applicants must subcontract with a building owner to provide rental assistance for units in a particular property. No application may receive more than \$10 million.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Supportive Housing for Persons with Disabilities (Section 811)**

Section 811 grant monies are awarded to private, nonprofit organizations providing assistance to expand housing with supportive services for persons with disabilities. This often includes group homes, independent living facilities, and intermediate care facilities. Section 811 is targeted for persons with a physical disability, developmental disability, or chronic mental illness which is expected to be of long and indefinite duration, substantially impedes the person's ability to live independently, and is of such a nature that such ability could be improved by more suitable housing conditions.

The program was authorized by the National Affordable Housing Act, Section 811. The competitive grants are available in two forms: capital advances based on the development cost limits published in the *Federal Register*, and project rental assistance to cover the difference

between the HUD-approved operating costs and 30 percent of the residents adjusted income. Occupancy is open to very low-income persons between the ages of 18 and 62.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Homeless Assistance Grants/Emergency Shelter Grants Program**

The Family Assistance Division's Homeless Assistance grants are to help improve the quality of existing emergency shelters for the homeless, to make available additional shelters, to meet the costs of operating shelters and of providing essential social services to homeless individuals to help prevent homelessness. The grants are 100 percent funded by the Health and Human Services and Housing and Urban Development departments. According to federal law, 95 percent of funds received must be allocated to the 12 regional Human Resource Development Councils (HRDCs). The grants fund the renovation, rehabilitation, or operating costs of homeless shelters, and the provision of follow-up and long-term services to help homeless persons escape poverty. Shelters to be assisted and service to be delivered are determined by the HRDCs. In FY 1993, the department will receive \$115,000 of HUD and \$73,361 of HHS homeless funding.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### **Safe Havens Demonstration Program**

Safe Havens grants are to provide very low-income housing for homeless people with serious mental illnesses. Funds may be used for new construction, acquisitions, rehabilitation, leasing assistance, low-demand support services, outreach activities for eligible persons, and operating costs. Governments and private and public organizations may apply for funding. Total assistance may not exceed \$400,000 in five years, and all funds must be matched. This program does not exist yet, but its design is begin developed.

*For further information, contact Nicole Kelso, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **Supportive Housing Program**

This program was created by the Housing and Community Development Act of 1992. It replaces the Supportive Housing Demonstration Program (Transitional Housing Demonstration Program and Permanent Housing for Handicapped Homeless Program) and Supplemental Assistance for Facilities to Assist the Homeless (SAFAH). It incorporates many features of these programs into one program of assistance to governmental entities and private nonprofit organizations to provide housing and supportive services to homeless people. In FY 1993, \$100 million will be available for the program. The Supportive Housing Program provides funding under four main components:

Transitional housing to facilitate the movement of homeless individuals and families to permanent housing.

Permanent housing that provides long-term housing for homeless people with disabilities (including AIDS and related diseases).

Housing that is part of a particularly innovative project for meeting the immediate and long-term needs of homeless individuals and families.

Supportive services for homeless individuals and families not provided in conjunction with supportive housing facilities.

The SHP covers acquisition, rehabilitation, new construction, leasing of structures, operating costs, supportive services, and administrative costs. Grants for operating costs are up to 75 percent for the first two years, and 50 percent for the next three years. Funds for acquisition, rehabilitation, and new construction must be equally matched by cash from other sources. Grants are available to states, local governments, other government entities, Indian tribes and housing authorities, private nonprofit organizations, and community mental health associations that are public nonprofit organizations.

Each year, programs undergo some changes to make them more efficient to operate and more responsive to those in need. Transitional Housing for the Homeless, Supplemental Assistance for Facilities to Assist the Homeless (SAFAH), and Permanent Housing for Disabled Homeless Persons have been incorporated into the Supportive Housing Program.

*Contact person: Nicole Kelso, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

## Housing Opportunities for Persons With AIDS

The Housing Opportunities for Persons with AIDS program (HOPWA) was established by the National Affordable Housing Act. In order to more expeditiously address the pressing needs of persons with AIDS and related diseases, HUD published a July 1992 interim rule. The rule describes two types of HOPWA grants: formula entitlement grants (90 percent of funds allocated) and competitively awarded grants (10 percent of funds allocated). HOPWA grants are to provide states and localities with the resources and incentives to devise long-term strategies for meeting the needs of low-income persons with AIDS and related diseases.

To qualify for a formula allocation, states or eligible metropolitan areas must have more than 1,500 cases of AIDS, a HUD-approved CHAS, and (for EMAs) a population of more than 500,000 people. For states, the 1,500 AIDS cases must be outside state EMAs. In December 1992, \$90 million dollars in assistance was made available for formula allocations.

All localities and states, regardless of population and number of AIDS cases, may apply for grants on projects of national significance. National significance is determined by the innovation of the project compared to other applying projects, and the potential for replication of the project. Funding for five grants to nationally significant projects was announced in August 1992 (*August 25, 1992, Federal Register*). Funding for five other projects was also announced at that time. These funds were aimed at states which did not qualify for formula grants, localities outside of EMAs, and localities inside EMAs that do not have a HUD-approved CHAS. For the FY 1992 competitive grant program, only government organizations could apply for funds. An additional \$10 million for competitive grants is expected to be announced in a later NOFA. Most activities proposed by the applicant will be considered for eligibility.

*Contact person: Bruce Desonia, Sexually Transmitted Diseases/AIDS, Dept. of Health and Environmental Sciences (406) 444-3565; Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

## Rural Homelessness Grant Program

Rural Homelessness grants provide direct emergency assistance, homeless prevention assistance, and assistance for permanent housing. Private nonprofit organizations, Indian tribes, county and local governments may apply. Other eligible areas are all areas outside of Metropolitan Statistical Areas and rural census tract within MSAs. The grants are designed for the following:

- rent, mortgage, or utility assistance;
- security deposits;
- support services;
- rehabilitation;
- short-term emergency lodging;
- transitional housing;
- cost of using federal inventory property programs; and
- capacity building.

HUD's Office of Community Planning and Development does not currently have information on this program.

### **Energy Programs**

Energy program funds are available from the Department of Energy and other agencies. Allocations can be used for rehabilitation and new construction.

#### **A. Weatherization**

Energy costs are one of the greatest demands on a low-income family's resources. During Montana's winter, these costs can exceed rental or mortgage costs. The weatherization program administered by the Montana Family Assistance Bureau is 100 percent funded by the Department of Energy and Department of Health and Human Services. The program is designed to help low-income persons reduce their home heating costs and to conserve natural resources. The funds are directed toward local Human Resource Development Councils (HRDCs) and tribal organizations. These organizations decide where the grant money will be spent to install energy saving measures in the homes of low-income persons. Homes are prioritized based on energy consumption.

Specific measures are decided upon after each home has had an energy audit to determine which activities would be most cost-effective. Measures include insulation, caulking, furnace repair and replacement. All labor and materials are purchased locally. By reducing overall costs, weatherization helps a family stay in their home, increasing family self-sufficiency. Income not spent on utility bills stays in the local economy, as does money spent on labor and materials.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services  
(406) 444-4546.*

#### **B. Low Income Energy Assistance Program (LIEAP)**

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services  
(406) 444-4546.*

## Low Income Housing Tax Credit Program

The low income housing tax credit is available under Section 42 of the Internal Revenue Code of 1986. The credit was first allocated in Montana in 1987. The federal income tax credit is available to owners of qualifying rental housing which meets stated rent limitation and low-income occupancy requirements. Owners of all buildings, except for certain buildings financed with tax-exempt bonds, must obtain a credit allocation from the appropriate state agency before claiming the tax credit. The Montana Board of Housing allocates the credit for housing located in Montana. The credit allowance for each state will be no greater than \$1.25 per State resident.

The tax credit is for residential rental buildings which are available to the general public and are part of a qualifying low-income project. Ineligible units include transient housing (initially leased for less than six months), buildings of four or fewer units which are occupied by the owner or a relative of the owner, nursing homes, life care facilities, retirement homes providing services other than housing, dormitories, and trailer parks.

The tax credit may be used in conjunction with the construction, substantial rehabilitation, or acquisition and substantial rehabilitation of qualifying residential rental housing.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

## C.2. NON-FEDERAL PROGRAMS

### i. STATE PROGRAMS

#### Energy Efficient Housing Program for New Construction

The Energy Efficient Housing Program for New Construction is planned by the Montana Bureau of Housing and Department of Natural Resources and Conservation as a means to assist middle-income persons with payments on newly constructed energy efficient housing. It would set up a mortgage insurance pool from which funds could be drawn. FHA would insure the first \$75,500 of the loan at 5 percent interest (their maximum) and the State the rest (also at 5 percent) up to \$97,700 (the IRS-allowed ceiling on mortgages financed with BOH tax-exempt bonds). The FHA maximum mortgage level is \$85,400 in Gallatin County, \$83,600 in Missoula County, \$83,050 in Cascade and Yellowstone counties, and \$75,500 in the remaining counties.

The two loans would total out to 95 percent of the appraised value of the house. There would be a single monthly payment on the loans. The maximum the State would need to insure is the difference between these two amounts, or \$22,200 per house. Houses will most likely fall into the \$85,000 to \$95,000 range. Each house would need certification of energy efficiency to qualify for the loans. The program could start with a \$300,000 appropriation of oil overcharge funds currently available to the State, and would expand the coverage of existing BOH programs. The insurance pool would be sustained with home owner contribution of 3 percent initial and 1.5 percent annual, paid monthly, mortgage insurance premium and utility

contributions to the pool. It would be maintained at an initial maximum value of 25 percent of the dollar amount invested in second mortgages.

*Contact person: Alan Davis, Bureau Chief, Montana Planning and Analysis Bureau, Energy Division, Dept. of Natural Resources and Conservation (406) 444-6756.*

## **MONTANA BOARD OF HOUSING PROGRAMS**

The Montana Board of Housing was created by the Montana Housing Act of 1975 in order to alleviate the high cost of housing for low-income persons and families. The funds to operate the programs administered under the act are generated through either the sale of tax-exempt bonds or from administrative fees. The board's programs fall into two categories: home ownership and multifamily programs. Each are described below.

*Contact person (all Montana Board of Housing programs): Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **HOME OWNERSHIP PROGRAMS**

#### **Single Family Bond Program (initiated in 1977)**

The Board of Housing works with approximately 80 lenders statewide to provide mortgages 1.5 percent below conventional rates to assist primarily first-time home owners. In certain target areas, the borrowers need not be first-time purchasers. The program has assisted over 18,000 Montanans to date, at a rate of 1,000 to 1,500 purchases per year. Average household income for the program is \$27,290, with a maximum family income limitation established by the BOH. Since 1975, \$734 million in bond proceeds have been loaned to home buyers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

#### **Mortgage Credit Certificate Program (initiated in 1987)**

This program enables moderate and low-income individuals to convert 20 percent of their annual mortgage interest expense from an itemization (income deduction) to a federal tax credit (tax payment reduction). Average household income of those served under this program was \$28,466. A total of 2,476 individual and family households have been assisted through this program since inception. While the program is mainly to assist first-time home owners, in certain target areas, the borrowers need not be first-time purchasers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

### **Home Buyers Cash Assistance Program (initiated in May 1991)**

This program provides cash assistance to close a loan for home buyers having an income of no more than \$23,000. Funds may be used for up to 50 percent of the minimum cash required to close a loan (maximum advance of \$1,000), and these funds are combined with 6¾ percent, 30-year mortgage money. Purchase price of the home may not exceed \$50,000. Since its inception, the program has provided permanent financing of \$4,917,213 for 138 homes. In addition to permanent financing, the program provided \$119,778 in cash assistance with closing costs. Average household income for this program was \$17,209.

### **203(k) Rehabilitation Home Mortgage Program (initiated in March 1992)**

The Board of Housing set aside \$5 million to provide a firm secondary market for the acquisition and rehabilitation of an existing dwelling not meeting minimum FHA standards. The home is to be owner-occupied with limited business use of the property. The purchaser is to be a first-time homebuyer except for certain targeted areas. This program is conducted in conjunction with the Department of Housing and Urban Development. The maximum loan amount is \$60,000 and family income may not exceed \$30,000. The refinancing of an existing home loan is not permitted. The board has purchased two loans for \$100,750.

### **Montana Manufactured Housing Program (initiated in September 1992)**

The Board of Housing set aside \$4.5 million to finance single family manufactured housing installed on a permanent foundation on titled (owned) property. Lot cost, well, and septic can be included in the loan. These are 30-year loans with a 7¾ percent fixed rate of interest for first-time homebuyers or single parents (a separated or divorced person that was co-owner of a house) with annual household income at or below \$25,000. The home is to be owner-occupied with not investor involvement. The lot cannot exceed five acres. The maximum mortgage amount is \$65,000.

### **Disabled Access Affordable Homeownership Program (initiated July 1, 1993)**

The board set aside \$3.5 million to provide affordable architecturally accessible homes for people with disabilities such that they can live independently. The board has approved for eligibility 55 applications for individuals/families with an average income of \$14,249.

## **MULTIFAMILY PROGRAMS**

### **Multifamily Rental Housing Program for Non-Profits (initiated February 1993)**

The Rental Housing Program provides mortgage funds for affordable rental housing for low-income Montanans. It is intended to use capacity and knowledge of local governmental units and non-profits to develop affordable housing to meet local needs. Funds are to be used to provide construction and permanent financing for projects meeting the terms and conditions

detailed below. Proposals will be accepted from governmental units and non-profits based on a Request for Proposal distributed by the BOH. Due to tax law restrictions, applicants for the pilot project are limited to governmental units or nonprofit subsidiaries of governmental units. Approximately \$50,000 of the \$2.5 million available can be lent to other nonprofit groups such as HRDCs, Neighborhood Housing Services, and other private, nonprofit special needs corporations. The eligible applicant must be the owner of the project, must oversee the construction, and must be the property manager for projects financed under this program. The eligible applicant may contract with private industry for various segments of the project.

### **Multifamily Bond Program (initiated 1978)**

From 1978 until 1982, the Board of Housing issued tax exempt bonds to finance the construction of new, or the rehabilitation of existing, low-income multifamily housing. During that period, the board financed 668 multifamily units for low-income families and the elderly. During federal fiscal year 1993, the board made preliminary commitments of loan funds through the Multifamily Pilot Program for Rental Housing to non-profit and governmental sponsors of seven projects. These projects total \$2,023,253 in loan funds, \$4,723,005 in projected costs, and will provide 79 units of affordable rental housing. All of the projects are anticipated to be constructed in 1994.

### **Low Income Housing Tax Credit Program (initiated 1987)**

This program made use of federal tax credits to provide incentives to developers to provide low-income housing. Housing built under the program was restricted to individuals with incomes at or below 60 percent of HUD median income. In addition, rents were restricted to 30 percent of monthly median income. The board allocated \$639,735 in federal tax credits for 154 units of rental housing. The city of Billings received 60 of these units, with a total of \$284,169 in tax credits. Three projects allocated credits in FY 1993 were placed in services in that year, as were two projects allocated carryover credits in prior years. These projects total 46 units and \$72,310 in tax credits (projects allocated in FY 1993) and 79 units and \$147,923 in tax credits (projects allocated carryover credits in prior years.) Through FY 1993, the board allocated a total of \$2,917,629 in tax credits for a total of 943 units of rental housing in 38 projects.

## **ELDERLY PROGRAMS**

### **Reverse Annuity Mortgage Loan Program for Elderly Persons (initiated in 1989)**

This program enables persons 68 years or older to benefit from an additional income source: their home equity. In addition to other uses, the funds may be used to make repairs or improvements to the home. The RAM pilot program is available to senior citizens meeting several general eligibility requirements. All borrowers must be 68 years of age or older. The borrower's annual family income must not exceed \$10,500 for one-person households, \$13,800 for two-person, and \$15,500 for three or more persons. The borrower must be the owner and

occupant of a single-family dwelling that is unencumbered by any prior mortgage. The single-family dwelling must meet minimum FHA property standards as determined by an FHA appraisal.

The loan amounts may range from a minimum of \$15,000 to a maximum of \$40,000. The maximum loan amount would be determined based on 80 percent of the FHA determined property value. Potential borrowers must complete a reverse annuity mortgage counseling program provided through the Montana Aging Services Network. The program has assisted 14 senior homeowners since it began taking applications. Funds committed to these loans totaled \$382,749. Average annual income for these borrowers was \$7,751.

### **C.3. PRIVATE RESOURCES**

#### **i. FOR-PROFIT**

The Community Reinvestment Act (CRA) has stimulated the involvement of for-profit organizations in the provision of affordable housing. One example of CRA's work is the Community Home Ownership Program of Norwest Bank. Ten million dollars has been allocated by Norwest Banks in Montana and Wyoming to be used for home mortgage loans. The loans are available to people in Norwest Bank-designated market areas in Montana for purchasing single-family, owner-occupied residential units. The bank's program provides a low down payment, no discount points, low loan origination fees, and competitive interest rates on home mortgage loans. The loans are available only to families earning no more than 115 percent of the HUD-determined median income for the area, or \$30,000. These benefits help make home ownership possible for some low- and moderate-income Montanans.

## **SECTION II - FIVE YEAR STRATEGY SUMMARY OF HOUSING PROBLEMS**

### **INSUFFICIENT HOUSING AVAILABILITY**

Lack of available housing requires resolution; nothing is available for low- and moderate-income Montanans in most parts of the State. When housing is available, it tends to be of substandard quality. Since the 1990 Census was taken, Montana's major cities have experienced a dramatic increase in population that is driving up the demand for housing; prices are following demand accordingly.

In cities such as Kalispell, Missoula, Bozeman, Helena, and Billings, in-migration is often comprised of higher income persons who are in a better position to purchase land and buildings than many current State residents. Of those Montanans who can afford housing, many must resign themselves to acquiring lower-quality shelter due to the encroaching housing shortage. Low-income Montanans lose housing options. People fear becoming homeless because they can no longer afford housing in their area, whether rented or owned. The housing that is being constructed tends to be more expensive, up-scale homes. Little, if any, construction activity creates affordably priced homes and rental property. Within the next few years, Section 8 waiting lists administered by the State are expected to swell about 65 percent, to over 10,000 people.

### **ABSENCE OF HOUSING AFFORDABILITY**

Affordability varies widely around the State, but it is typically a severe problem in the more urbanized areas. Rural and sparsely populated regions of Montana tend to experience dual problems: housing shortages and housing quality. Because of the tight market and general lack of homebuilding, prices for both homes and rental units have risen sharply in the last year.

There is a large gap between what the market is supplying and what people can afford. Some Section 8 landlords are increasing rents at annual review, citing prevailing markets, rates, taxes, and sewer increases. Other Section 8 landlords are simply leaving the program for the private rental market that provides wider profit margins, citing HUD limitations on rent increases and use of vouchers and certificates.

### **INADEQUATE HOUSING SUITABILITY**

A major problem pertains to the structural and physical integrity of the housing stock. Although many people live in their own homes, incomes are not high enough to maintain them. Several examples highlight this condition. Physical deficiency in much of the housing stock is a major problem statewide. A portion of the stock is 100 years old and built on sandstone foundations. Structures also tend to have old, inadequate electrical wiring and gas vented chimneys used for wood stoves. Most older homes are poorly insulated. Particularly troubling

for the large stock of Montana's older homes, is the prospective risk of lead-based paint hazard. Nearly two-thirds of the housing stock could be affected, although low income rentals present the greatest risks.

In these areas, lack of return on investment is a major problem for landlords of housing units that need rehabilitation. Landlords do not want to lose their present tenants, but are also reluctant to borrow money and incur debt when they cannot afford to evict tenants or raise the rents to meet the debt service.

## **LACK OF HOUSING ACCESSIBILITY**

Under the Americans with Disabilities Act, housing accessibility has become a visible need across the State. Accessibility is a problem unless a unit is specifically built for people with disabilities. Modifications are often difficult and expensive, and must be removed when the tenant leaves (according to the ADA). Most people with disabilities cannot afford to do this, and landlords do not want the inconvenience or cost of constant remodelling.

## **A. SUMMARY**

### **MONTANA'S FIVE-YEAR HOUSING STRATEGY OBJECTIVES**

While all housing difficulties fall into one (or more) of the four problem areas, the exact circumstances faced by Montana's communities are as diverse and widespread as the State's geography. A combination of population in-migration and an economy undergoing structural change has had a dire effect on Montana's housing situation. Since the 1990 census was taken, the cost of housing has risen dramatically; available, affordable housing for the very low-income, low-income, and moderate-income population has disappeared in many areas of the State. In other parts of the State, existing vacant housing needs maintenance, causing an overall decline in the suitability and quality of housing. No single prescriptive approach to solving Montana's housing problems is applicable on a statewide level. Montana's strategy is designed to address the four problem areas, but is comprised of many pieces. These are itemized below, and summarized immediately thereafter. The strategic actions are:

- Relieve the shortage of available housing stock;
- Increase the stock of rental units, especially assisted units;
- Promote capital formation to build an adequate number of affordable housing units;
- Increase the ability of low- and moderate-income households to buy homes;
- Increase resources to finance housing maintenance and improvements;
- Better define and explain housing assistance programs;
- Work to ensure fair housing compliance;
- Assist in securing adequate resources to meet the needs of persons requiring supportive and transitional services in achieving permanent housing;
- Assist in securing adequate resources to meet needs for supportive services for the homeless;
- Assist in securing additional funding and resources to increase capacity and counseling service for runaway youth;
- Increase accessibility of Montana's housing stock;
- Increase energy efficiency of Montana's low-income housing stock; and,
- Increase MDOC's ability to respond for requests for technical assistance.

## STRATEGIC ACTION DISCUSSION

### RELIEVE SHORTAGE OF AVAILABLE HOUSING STOCK

There is a lack of housing in Montana. The problem is especially severe for the low- and moderate-income population. From the long-term poor to the newly poor, the elderly, disabled, families, and young singles all face a lack of affordable housing and shelter. The largest increase in need, however, appears to be for low- and moderate-income families. The number of homeless, newly poor families has risen greatly in the last year, while the State's available, affordable housing has decreased. This increase in demand has been met with little corresponding increase in housing stock anywhere in the State.

Vacancy rates statewide average from 3 percent in some of the rural areas to zero in the urban areas with long waiting lists. Because of the shortage of all types of housing, landlords can rent their units for much higher prices. The increase in demand caused by people moving into Montana from other states prices the low-income population out of even minimum standard shelter. Deinstitutionalization of mentally disabled people, an increasing number of elderly people who can no longer maintain their own homes, and low-income people displaced by those who can afford to pay higher rents are contributing to the problem as well.

Surveyed statewide housing officials expressed the opinion that developers have no incentive to build the kinds of housing needed to ease the housing problem in Montana. There is little or no return on a builder's investment in low-income housing and a lack of zoning for multifamily dwellings. There is also a shortage of land subdivided and ready to build upon, and a severe lack of mobile home spaces. Weak statewide subdivision regulations allow the creation of subdivisions through "occasional sale" transactions. This frustrates comprehensive planning efforts, creating infrastructure problems for cities and counties.

### DESIRED ACTIONS

New construction must be initiated. Montana needs multifamily dwellings and additional public housing. Rehabilitation programs to keep existing stock from deteriorating and maintenance programs to help the elderly remain in their homes will be promoted. State-funded housing programs should be expanded to help build housing and provide state matches for federal programs. MDOC intends to facilitate a cooperative effort among lenders, local housing authorities, and service organizations to develop cohesive packages to compete for housing program funds. Incentives to builders will be inspected. Programs such as the Low Income Housing Tax Credit Program and the Single Family and Multifamily Bond Programs will be further encouraged.

MDOC expects to release a set of model zoning and land-use policies that encourage affordable housing. Furthermore, local governments will be encouraged to review their land-use policies to determine whether they are exclusionary with respect to certain types of affordable housing.

## **INCREASE STOCK OF RENTAL UNITS: ESPECIALLY ASSISTED UNITS**

Public Housing Authorities (PHA) in Montana have not been able to keep up with the demand for affordable rental housing for low-income persons. Waiting lists in the major cities are extremely long, especially for families. The State-administered Section 8 waiting list is anticipated to exceed 10,000 within the next few years. Furthermore, in the July 1992 regional competition for rental certificates and vouchers, no rental certificates or vouchers were allocated to PHAs in Montana. Every administrator of Section 8 subsidies in the State reports growing waiting lists for families.

Housing officials also noted that Section 8 vouchers are issued to the tenants themselves, independent of a particular unit. The potential exists for those holding vouchers to take them with them when they leave the community. Housing officials are not issuing new vouchers, resulting in a community less able to address low-rent housing needs. This problem is especially difficult for rural areas where people are leaving in greater numbers to find employment in larger communities.

### **DESIRED ACTIONS**

More affordable multifamily rental housing must be created. MDOC will work to facilitate rental housing programs that are directed toward the development of new units and rehabilitation of existing unsuitable units.

The Section 8 voucher system does not guarantee that the assistance will stay within a community, since families take vouchers with them when they move. Periodic review of voucher distribution by HUD and the State of Montana would help determine if additional vouchers should be issued. If so, MDOC will advocate on behalf of the State.

## **PROMOTE CAPITAL FORMATION TO BUILD AFFORDABLE HOUSING UNITS**

There has been little new construction or rehabilitation of existing housing units in recent years. HUD noted in its June 1991 report entitled *A HUD Perspective of Montana* that a portion of this problem relates to capital scarcity:

"There is little new development of apartments in the State. Refinancing of existing projects is also slow because of low market value and constrictive underwriting requirements for available programs. Importation of capital into Montana via conventional sources is scarce. Local lenders shy away from lending on government projects because of their size and the lenders' lack of knowledge about HUD programs."

Further, the 1986 Federal Tax Reform Act eliminated a number of investment incentives including the provisions effecting capital gains exclusions, accelerated depreciation and passive income issues. For example, the investment tax credit for the rehabilitation of older buildings for income purposes including multifamily housing has been severely impacted. The Montana State Historic Preservation Office, which manages the program, notes that the number of projects has diminished sharply since 1986.

Often real estate development financing is derived through the use of limited partnerships. The investment incentives for limited partnerships were all but eliminated through provisions in the 1986 Act. This has resulted in the development of fewer multifamily units aimed at benefiting low-income Montanans. According to the Montana Building Industry Association, the loss of federal tax incentives associated with multifamily construction in 1986 is now resulting in a serious rental housing shortage in a number of Montana jurisdictions.

Some areas of the State cited higher "outside" costs as a contributing factor to the lack of development of multifamily units. These include infrastructure development, service hook-ups, and compliance with various local land use regulations. However, all agreed that the overriding issue has been the loss of important federal incentives which guarantee an adequate rate of return for the development of multifamily housing.

In many areas, especially those where there is a high demand for all types of rental housing (college communities, tourism communities, and communities which offer regional medical and social services), housing officials noted that fair market rents under the Section 8 program were too low to be of interest to private developers.

Prospective lowering of HUD fair market rents (FMR) could make this situations worse. FMRs are often already below the non-subsidized rents charged in a community.

#### **DESIRED ACTIONS**

Since permanent acceptance of the Low Income Housing Tax Credit has passed, MDOC is in a better position to provide information to investors for the purposes of helping them to identify the best markets of affordable housing.

Also, recent legislation (SB 215) passed by the Montana Legislature no allows a county or a municipality to donate Tax-deed land to a nonprofit corporation for the construction of residential housing. These resources must now be located and encouraged for the development of affordable housing units. Private developers need to be assured of an adequate return on their investment.

#### **INCREASE ABILITY OF LOW AND MODERATE INCOME HOUSEHOLDS TO BUY HOMES**

Many low-income families currently living in rental housing would like to move into a home. The monthly mortgage payment is typically lower than rental costs in a non-subsidized unit. However, many people lack sufficient funds for the down payment and closing costs. A second complications relates to the type of housing being selected by the lower income household. In order to qualify for participation in various programs (Montana Board of Housing, FHA, VA) the house itself must be qualified. Some of the available housing is too high-priced to qualify for the Board of Housing programs. Buyers are having difficulty finding a qualified house which they can afford.

**DESIRED ACTIONS**

The newly established HOPE and HOME programs will provide new sources of funds to assist first-time homebuyers in securing affordable housing. MDOC will continue to efficiently administer these programs.

The Montana Board of Housing 203(k) program, which assists home buyers in making repairs to homes in order to qualify for mortgage assistance, could be more widely utilized. The loan limitations contained in the program could be reviewed to reflect inflationary effects on the cost of renovation and compliance work. MDOC will work to expand this programs effectiveness.

**INCREASE RESOURCES TO FINANCE HOUSING MAINTENANCE AND IMPROVEMENTS**

Funding is limited for improvements to homes and rental units, especially for elderly persons, persons who require special modifications for disabled access, for those experiencing high energy costs, and for those homes which are in violation of building codes. This violates Montana's policy of securing a suitable housing stock.

**DESIRED ACTIONS**

Homeowners, renters, and landlords need education programs that teach them how to recognize seemingly small problems that need attention and how to do simple repairs themselves. Many general lack of knowledge available programs such as Montana Board of Housing Reverse Annuity Mortgage Program. This program allows senior citizens to tap into their home equity to secure resources for maintenance. Long-term housing rehabilitation loan funds could be made available through other avenues too. All these are to be available to low income households.

The State could identify programs to assist elderly persons who wish to stay in their own homes. These might include special community projects which employ persons to make needed repairs. CDBG funds may be used to leverage private dollars to establish revolving loan/grant funds. Under such a program public and private dollars could also be made available to senior homeowners to make repairs. As with the Reverse Annuity Program, the loan would be repaid when the house was sold.

**SIMPLIFY HOUSING ASSISTANCE PROGRAMS**

Paperwork and documentation requirements are complex, detailed, and stringent and personnel needed for such activities are very limited. Perceptions are that rules, regulations, and available funds are too program-specific and difficult to properly target. Housing programs are run as separate, categorical programs with no comprehensive mechanism to combine programs to fit client's varied needs.

## **DESIRED ACTIONS**

MDOC will encourage agencies to coordinate program implementation efforts and pool their resources. The MDOC Housing Information Clearinghouse will incorporate all active programs in the State, include all assistance facilities, and provide contact names and program descriptions. This process will encourage a single-source information data base, able to respond to all housing- and program-related inquiries.

MDOC will work to provide simpler program access and administrative procedures. The CHAS Steering Committee will form a task force designed to inspect and recommend options for enhancing efficiency and practicality in program administration.

The CHAS process is intended to bring federal, state, and local government together with citizens, and the private sector to help develop a coordinated State plan.

A statewide database which identifies all disabled accessible living units in the State would help disabled persons, housing managers, and other housing advocates. Housing discrimination continues to be a significant obstacle for people with disabilities. It has been suggested that programs to test for discrimination be expanded and housing development projects be monitored for compliance with federal statutes regarding the number of accessible units.

## **WORK TO ENSURE FAIR HOUSING COMPLIANCE**

With rental units full and tenants experiencing difficulty with suitable housing, it has become easy to discriminate against the poor, the physically disabled, the mentally disabled, Native Americans, even the elderly. Landlords can, and do, pick and choose to whom they rent. Sexual harassment and unwarranted eviction have been reported.

## **DESIRED ACTIONS**

The general public, landlords, and tenants alike need to be better educated on fair housing practices. The State needs to affirmatively further fair housing practices in whatever way it can. Violations of fair housing practices need to be reported and handled in an effective way. MDOC will continue to ensure that each project approved under programs it administers will enforce fair housing regulations and requirements.

## **SECURE ADEQUATE RESOURCES FOR PERSONS NEEDING SUPPORTIVE AND TRANSITIONAL SERVICES**

Homeless individuals and families and persons with disabilities require supportive services in conjunction with the provision of affordable housing. In particular, those persons with non-mobility related disabilities often require extensive special services, particularly those who are chronically homeless, chemically dependent, or mentally disabled.

**DESIRED ACTIONS**

Preventative measures to keep people in their homes are desirable. Funds for short-term payment of mortgages until families find new employment would significantly reduce the number of homeless persons. As with other types of rental housing, incentives must be expanded to attract private dollars for the construction of additional transitional units. Further, the State is interested in providing housing assistance, and services, to those who may require it.

**INCREASE ACCESSIBILITY IN THE HOUSING STOCK**

Accessibility is a critical issue for many disabled persons. Accessible housing must be developed for disabled persons. The development of capital resources is required to assist homeowners and rental unit managers in the rehabilitation of existing units to provide accessibility. Both remedial and compensatory projects which accommodate the accessibility costs for property managers, landlords, and homeowners with disabilities are critically needed. Further, disabled renters need more assistance in rental deposits so that once units are available, initial occupancy costs are not prohibitive.

**DESIRED ACTIONS**

Work to promote accessible housing. Implement and utilize the Disabled Accessible Affordable Homeownership Program initiated late in FY 1993 by the Montana Board of Housing. Encourage support all applications for Section 811 funds.

**INCREASE ENERGY EFFICIENCY IN THE HOUSING STOCK**

Given the high cost of space heating in Montana, it has been suggested that greater emphasis be placed on the energy efficiency of rental units to assure lower utility costs to tenants. Multifamily projects which use innovative heating and cooling systems emphasizing conservation could be given preference.

**DESIRED ACTIONS**

Expand the use of weatherization funds to multifamily rental units. Promote long-term solutions to the energy efficiency problem through the Energy Efficient Housing Program for New Construction. Lobby for a larger percentage of LIEAP fund to be applicable to the weatherization of low-income homes.

**DECREASE HOUSING ENVIRONMENTAL HAZARDS**

A major environmental hazard affecting housing is lead-based paint. Montana programs related to control of lead-based paint hazards are in their infancy at the present time. Pre-1940 housing units, those most likely to contain lead-based paint, make up 17.1 percent of the total units in Montana. Of those units built before 1940, 25.4 percent are occupied by very low-income renters. Older rental units have higher rates of lead poisoning than do pre-1940 owner-

occupied units. Of all renter households, about 58,010 are estimated to have lead-based paint. For owner-occupied households, 92,189 are estimated to have lead-based paint. This is not an indication of the number of households with a lead-based paint hazard; it is merely those most at risk. The findings of initial Superfund-related study by the Butte-Silver Bow Health Department, when applied to the State, indicate that approximately 8,500 children may currently be at risk of lead poisoning.

Only two programs are currently functioning. East Helena has a lead program which is relatively small, screening approximately 50 children annually in the East Helena area only. The program is funded by ASARCO and is part of the Lewis and Clark County Health Department.<sup>27</sup> The Butte Childhood Lead Poisoning Prevention Program is a comprehensive program funded by the Atlantic Richfield Corporation (ARCO). The Butte program is part of the Butte-Silver Bow County Health Department. Funds are used to support staff positions, screening activities, lab support, and environmental investigations.

#### **DESIRED ACTIONS**

The Montana Childhood Lead Poisoning Prevention Program will entail the creation of local programs within the communities thought to have the highest at-risk population: Great Falls and Missoula. The program would eventually incorporate other major cities not served and access for rural areas through the urban program. Activities for the first year include the launching of a statewide education and outreach effort, organizing the program in these two cities, and demonstrating a rural outreach model, accessing areas of southwestern Montana through the existing program in Butte. The first six months would be spent in selecting and training community staffs and launching the education program in each area. Screening, environmental assessments, and environmental and medical management would begin after the first six months.

The Montana Department of Health and Environmental Sciences (MDHES) has requested funds under the State and Community-Based Childhood Lead Poisoning Prevention Program. The funds will be used for the Montana Childhood Lead Poisoning Prevention Program. This program will be initiated by the Butte-Silver Bow Health Department, under contract to MDHES. A secure funding source needs to be located.

Implementation should continue on a Lead Levels Advisory Committee with representatives from county and State government, the private non-profit sector, universities, physicians, and citizens. In addition, the Occupational and Radiological Health Bureau in the State Department of Health should complete their proposed program to certify training courses for workers, supervisors, and inspectors of lead-based paint evaluation sites.

---

<sup>27</sup> The East Helena Lead Program began in conjunction with an overall environmental investigation associated with area smelting activities.

## **FURTHER THE PREVENTION OF HOMELESSNESS**

Homelessness, while not as prevalent a problem in Montana as in other states, continues to grow. With several areas experiencing very high rates of unemployment, continuing low wage rates, and some industries continuing to experience difficult to adverse economic conditions, homelessness may continue to threaten many Montana citizens. Actions need to be taken to prevent others from becoming homeless.

### **DESIRED ACTIONS**

These actions will include additional training and counseling. Such actions, while not always directly a housing program, will involve local and state social service agencies in the development of transitional housing, permanent housing, and employment training. Their immediate needs relate to affordably priced permanent housing, medical health services, food, and clothing.

## **FURTHER SUPPORT SERVICES FOR RUNAWAY AND HOMELESS YOUTH**

As noted in the SRS survey of homelessness in the State, homeless youth were the only group that was turned away from the facilities during the winter count. This should not have happened, as this groups may turn to less desirable ways to secure shelter.

### **DESIRED ACTIONS**

Montana will attempt to secure a more stable stream of funding to support services for runaway and homeless youth. This group suffers from behavior anomalies and has had difficulty adjusting to adulthood. Alcohol and drug treatment, emotional and mental counseling, job training, and other services are required.

## **B. PRIORITY ANALYSIS AND STRATEGY DEVELOPMENT GEOGRAPHIC DISTRIBUTION AND IMPLEMENTATION**

Housing needs across the State of Montana vary widely. The extreme diversity in available housing, the age of the housing stock, and the overall range in population density complicate assessments of the degree of need. There is a broad array of housing availability, affordability, and suitability problems. The State believes that simply treating the symptoms of the malady will not be sufficient to solve the problems. Resources do not appear to be adequate to completely deal with the housing needs and requirements that plague the State.

The State intends to implement its five-year strategic plan statewide, using funds in a competitively based process founded on needs identified at the local level. This means that each local entity must evaluate its needs carefully, articulate them well, present a plan to acquire program resources, and compete with other jurisdictions applying for funds. Montana does not have sufficient resources to fulfill all requests, or to address all problems at the same time. Those best planned and articulated receive funding.

The needs identified and prioritized at the State level may not retain a similar priority rating for implementation at the local level. The statewide priority classification represents only a general indicator of anticipated applications; actual application activity by local jurisdictions may be different, as the identification and quantification of need at the local level is incumbent upon the local community.

The programs historically have been implemented on a statewide competitive basis, and entities receiving CDBG funds are forced to draw down their allocations by 75 percent before they are eligible to apply for additional program funds. This method has been shown to disburse funds equitably throughout the State, allowing all entities an equal chance to apply for funds. Therefore, program activities associated with entitlement areas, non-entitlement metro areas, and rural areas are all represented.

CHAS Table 2, on page 185, presents the priority rating for each type of in-need group. These ratings are summarized in the narratives below.

### **PRIORITY RANK #1 - RENTER AND HOMEOWNER HOUSEHOLDS**

For the following discussion, several first priority categories are accumulated, as the analysis and public comments relate to one or more of the assistance segments within these categories of very low, low, and moderate renter and homeowner households. As well, the market and inventory conditions, and needs assessments, are common to the in-need groups. However, small related and "all other" households are exempted from this discussion, as these in-needs groups have been assigned a priority #2 rating and are discussed separately later in this report.

## i. ANALYSIS OF PRIORITY RANK #1 -- RENTER AND HOMEOWNER HOUSEHOLDS ECONOMIC HARDSHIP

Many of Montana's households have been suffering under economic hardship. The basic economy has historically been dependent upon a few resource-based industries. These are agriculture, mining, and manufacturing processes such as lumber and wood products, and the milling of minerals. Even though tourism is considered a solid basic sector with employment benefits, the rate of pay in this industry has typically been quite low.

The status of the State's economy, then, is dependent upon the health and viability of resource-based industries. Unfortunately, these industries are suffering from stagnant conditions or are declining. As Diagram 2.1, below, demonstrates, the average

**DIAGRAM 2.1**  
**AVERAGE EARNINGS IN MONTANA**  
**1987 DOLLARS**

rate of pay in all of Montana's industries has been declining steadily since the early 1970s.

For example, forest management practices are under review, and anticipated harvests from federal timber lands are expected to decline. University of Montana studies have forecasted declines as large as 50 percent in northwestern Montana's lumber and

wood products employment over the next ten years. Employment and earnings derived from agriculture remain speculative, at best. The mining industries are moving much further toward mechanization; and older existing facilities are closing in the face of increasing environmental constraints. These conditions imply an increasing degree of economic hardship for many Montana citizens.

On top of this complication, statewide unemployment rates have been rising over the last few years. Between 1990 and 1991, Montana's unemployment rate rose from 5.8 to 6.9 percent. Unemployment pressures have eased some, to 6.7 percent in 1992, but increasing unemployment worries still exist. Table 2.1, at right on the previous page, presents the unemployment rates by county and the State as a whole over the last three years. There are several areas that are sustaining very high unemployment rates, while others are reporting much lower rates. For example, Big Horn County indicates the highest unemployment rate, 15.8 percent and Carter County the lowest, with 2.4 percent. Uneven economic opportunities exist within the State.

Within Montana, per capita income varies widely, as evidenced by Big Horn County's low of \$7,148 and Helena's high of \$13,256. The statewide average is only \$11,213. This implies that significant variation may occur among households within the State. A more accurate way of inspecting the relative income between areas is to rank the percent of total household incomes below a particular threshold. This is better than comparing just per capita income as it accounts for households with additional wage earners. Data representing the percent of low income households in each area were computed and ranked. Low income concentrations are defined as those areas having a greater percentage of households below Montana's statewide low income threshold, 80 percent of the State median family income or \$22,435. Census income data is reported by category; \$22,500 is used to approximate the low income threshold. Table 2.2, on the following page, presents all areas ranked by percent. Those that fall within the low income criteria are listed above the dotted line, starting at Park County. In general, there appear to be very large blocks of the population in low-income households. In fact, Wheatland County has the highest percentage of households in the low income category, with over 65 percent of the households. Only one area has less than 25 percent of its households in the low income category, Helena Valley Northeast CDP. Given these facts, large sections of Montana can be considered as low-income areas.

The largest segment of the population is the very young, from 0 to 18 years of age. This group is 29.3 percent of the total. However, the population of Montana is older than the nation as a whole; the 1990 median age in Montana is 33.8 while the nation's is 32.9. The elderly (those 60 years of age and older) also have a significant representation in the age distribution of Montana with 17.6 percent.

Just over 67 percent of Montana's occupied housing units are occupied by their owner (owner-occupied); the remaining 33 percent are renter-occupied. The rate of home ownership is much higher in the rural areas of the State (72.6 percent) than in the major cities (only 59.8 percent). As is true of the nation as a whole, the largest single group of homeowners in

Montana is the elderly. Of all the owner-occupied units in Montana, 26.4 percent are occupied by those 65 years of age and older. This is true of both the major cities and rural Montana. Overall, the 35-44 age group has the second highest rate of home ownership in both rural areas and the major cities. The total number of housing units was 361,155 in the 1990 census, of which over 15 percent were vacant. Diagram 2.2, below, displays the number of households, by ownership status, in each of the three geographic area designations addressed herein.

**DIAGRAM 2.2**  
**RENTERS AND OWNERS**  
**BY GEOGRAPHIC AREA**

The people most likely to rent in Montana, in both rural areas and the major cities, are those in the 25-35 year old age group. Given that people in this age category are more likely to live in the cities and occupy an individual unit, and further, that home ownership is less affordable in the major cities, there is an indication of a need for assistance to young adults who are first-time buyers in the acquisition of homes. Those least likely to rent are those in the age group 45-54.

Montana	150,562	49.08%

According to the 1990 Census, nearly 27 percent of Montana's dwelling units were constructed between 1970 and 1980. Another 21 percent were constructed prior to 1940. Homes built before 1940 have some potential for structural problems relating to inadequate foundations and floor supports, poor plumbing, outdated electrical wiring, and substandard roofs. Because of this, pre-1940 housing tends to need moderate rehabilitation. Other prospective environmental hazards exist, which will be discussed shortly. Diagram 2.3 displays a pie chart representing the percent of occupied housing units in each age category. Large discrepancies underlay the statewide average in quality of housing construction. As noted earlier, some areas of the State have lost population. This implies a shortfall in housing construction and increases the potential for a more hazardous housing stock.

**DIAGRAM 2.3**  
**AGE OF OCCUPIED HOUSING UNITS**

### EXCESSIVE COST BURDEN

In assessing whether or not there is affordable housing available in Montana, both income levels and housing costs have been inspected.<sup>28</sup> A monthly housing cost in excess of 30 percent of income constitutes a cost burden. Approximately 18.6 percent of Montana households (59,217) earn less than \$10,000 annually, and 32.1 percent (98,548) earn less than \$15,000. Therefore, a monthly housing cost in excess of \$250 represents a cost burden to nearly one-fifth of Montana households, and payments over \$375 would be a burden to nearly one-third. The following analysis examines the affordability of housing to renters by looking at the percentage of monthly income that would be required to make average rent and utility payments. Affordability for potential homeowners is examined by looking at the cash outlay and annual income required if monthly housing costs are to equal 30 percent of income, for average and low priced homes. These calculations are intended to indicate the typical costs. Costs and income requirements are shown for both conventional financing and Federal Housing Administration (FHA) or Farm Home Administration (FmHA) financing. These cost burdens and income requirements will then be compared to census information to see how many households in Montana can afford the average home.

Rent burden calculations were made by using 1990 Census figures for contract rent. For home buyers, the calculations for monthly payments and cash outlay at closing were made by using 1990 Census figures for the average asking prices of vacant for-sale housing units and applying formulas used by the banking industry, the FmHA, and the FHA. For conventional

<sup>28</sup> Income and housing cost data taken from the 1990 Census -- U.S. Department of Commerce, Bureau of the Census.

loans, cash outlay at closing includes a 10 percent down payment plus typical closing costs.<sup>29</sup> The Farm Home Administration (who makes loans in rural areas with populations of less than 10,000 people) estimates that there will be no cash outlay of closing down payment. They assume only typical Farm Home closing costs.<sup>30</sup> The FHA cash outlay at closing includes a 3 percent down payment plus 43 percent of the closing costs. The other 57 percent of the closing costs and the required mortgage insurance costs are added to the loan amount.<sup>31</sup> The monthly payments for all of the loans are based on a 30-year, 9 percent fixed-rate loan plus taxes and insurance. Average utility costs of \$101 per month for a two-bedroom, multifamily unit with electric heat have been added to rent cost to calculate cost burden for rental units. Average utility costs of \$125 for a single-family, three-bedroom home with gas heat have been added to the monthly mortgage payments to calculate income requirements for homeowners.<sup>32</sup>

Low-income renters in Montana's rural areas are less likely to experience severe cost burden than low-income renters in Montana's major cities. Households earning \$10,000 or less annually would be paying at least 52 percent of their income to occupy the average housing unit in the major cities. This constitutes a burden far in excess of the 30 percent standard. Similarly, in the census designated places, a household with a \$10,000 annual income would have to use 55 percent of their income to rent the average housing unit. The situation for that income group is of particular concern in the Sun Prairie CDP, where the renter cost burden is highest, at 65 percent for the average rental housing unit.

**TABLE 2.3**  
**AFFORDABILITY OF AVERAGE RENTAL UNITS**

AREA	MONTHLY RENT \$	PERCENT OF INCOME	
		\$10,000	\$15,000
Sun Prairie CDP Average	543	65%	43%
City Average	436	52%	35%
CDP Average	461	55%	37%
Rural Average	331	40%	26%

Table 2.3, above, illustrates the cost burden of average priced rental units in cities, CDPs, and the remaining rural areas. As that table shows, average rent in the rural areas is lower than in urban areas, but it still presents a cost burden of 40 percent to a householder with \$10,000 in income. Even for a household with a \$15,000 annual income, the cost burden is over 30 percent for all but the rural areas. Although the cost burden is not severe for that group, the important questions for those rural areas become if there are enough rental units

<sup>29</sup>Typical closing costs estimated with the assistance of Colleen Cebula, First Interstate Bank of Missoula.

<sup>30</sup>Information on Farm Home Administration loans and typical closing costs provided by Peter Halvorson, Farm Home Administration Office, Hillsboro, Oregon; and Nikki Stahley, Farm Home Administration Office, Billings, Montana.

<sup>32</sup>Section 8 Utility Allowances, revised October 1992.

available, if they have adequate kitchen and plumbing facilities, and whether or not they are maintained at or above minimum health and safety standards.

While the above analysis focused on whether low-income households could afford average rents, another question should also be examined. What portion of the population cannot afford the "average rent"?<sup>33</sup> Table 2.4, below, illustrates average rents, the income needed to pay that average, and the percent of households with an income below \$15,000. As this table demonstrates, 26 to 33 percent of the population does not have the income to afford the average rent. Furthermore, there is wide disparity between urban and rural costs and cost burdens. as [resented in Table 2.4. This data portrays the number of households in each area that fall within a particular rent level category.

**TABLE 2.4**  
**INCOME NEEDED TO PAY THE AVERAGE RENT**

AREA	MONTHLY RENT	INCOME NEEDED	PERCENT OF HH WITH > \$15,000 INCOME
City Average	436	\$17,440	33%
CDP Average	461	\$18,440	26%
Rural Average	331	\$13,240	32%

What holds true for renters is generally true for the first time-home buyer in Montana. The cost of buying a home in rural Montana is less than it is in the cities and CDPs, although there is some disparity among rural areas in the average values of vacant, for sale homes. Table 2.5, below, shows the average values for homes in cities, census designated places, the remaining rural areas, and in Gallatin County which had the highest average home value in Montana (according to the 1990 Census). Those average values are then used to show the costs to first-time home buyers who are able to use conventional financing. Recognizing that many

	\$60,000	\$2,300	\$640	\$26,600	
	\$80,000	\$2,700	\$740	\$28,800	

<sup>33</sup>Average rent computed from the number of rental units in each rent cost category and the midpoint of the rent category, as reported in the 1990 Census, plus utility costs used in the Section 8 Housing Utility Allowance Program (revised October 1992).

first-time buyers cannot come up with the cash that is required at closing to utilize conventional financing. Table 2.5 gives some examples of the cash and income requirements for both Farm Home and FHA financing.

In the rural regions of eastern and north central Montana, where the vacancy rates are high, the average asking price for a vacant, for sale home was under \$26,000 at the time of the 1990 Census.<sup>34</sup> At this rate, a household income of approximately \$15,200 would make a home in those areas affordable if the potential home buyer is able to take advantage of Farm Home financing. In those rural areas, rather than income being a limiting factor, the condition of the \$26,000 home and whether it would qualify for any type of financing appears to be a crucial limitation.

In the rural regions of south central and southwestern Montana, which have relatively high vacancy rates, an average home was reported to be valued at about \$50,000 in 1990. An annual household income of approximately \$24,000 to \$25,600 (depending on the type of financing available) would generally make a home affordable in these regions. The average asking price of a vacant, for sale home in rural western Montana is generally higher than other rural areas of the State. In those higher-cost areas, the asking prices were \$60,000 or more, requiring a minimum household income of approximately \$27,000 to \$30,000, depending on the type of financing available.

In the CDPs, the average home value was reported to be approximately \$60,800 in the 1990 census. With conventional financing, the minimum income required to buy that \$60,800 home is \$27,600. Average home value in the major cities is approximately \$67,700, requiring a minimum annual income of approximately \$30,000 if using conventional financing. The major cities have comparatively low vacancy rates ranging from 4.0 percent to 10.2 percent as opposed to the rural range of 17.3 percent to 22 percent. This indicates a higher demand for housing in the cities and supports the higher cost of housing in those areas.

It is important to note that while mortgage rates appear affordable to many, the ability to save for a down payment can be a prohibitive factor, especially for conventional financing. While the down payment requirements are lower for FHA financing, the monthly payments and minimum income requirements are higher due to the larger loan amounts. Also important to note is that the banking industry calculations for minimum income requirements are based on a standard that the total of the principle, interest, property tax, and insurance payments can not exceed 28 percent of gross income. It is also a standard requirement that total monthly obligations (including automobile and credit card payments) not exceed 36 percent of gross income.<sup>35</sup> For those households whose other monthly obligations exceed 8 percent of gross income, their minimum income required to purchase a home will be higher than indicated in Table 2.5.

---

<sup>34</sup>The term "asking price" and "home value" are synonymous in this discussion.

<sup>35</sup>Colleen Cebula, First Interstate Bank of Missoula.

Table 2.5 also lists that portion of total households which earn less than \$25,000 annually. Examining the incomes required if housing costs are not to exceed 30 percent of income, we see that purchasing a home through conventional financing is out of the reach of over half of the people in the cities and CDPs. Purchasing a low-priced home becomes more affordable through the use of Farm Home or FHA financing and in the rural areas of the State. However, the question again becomes one of whether or not these low-priced (and typically rural) homes are in a condition that will allow them to qualify for financing.

Therefore, three housing availability issues are of concern for Montana. The first is the availability of rental units, especially low-cost units. The second issue is the availability of homes which meet the criteria for loan assistance and mortgage insurance. The third availability issue is the number of affordable homes on the market for low- and moderate-income people.

In regard to the first issue, there were approximately 34,601 low-rent units (units which cost no more than \$250 per month) in Montana at the time of the 1990 Census. Approximately 11,389 low-rent units are federally assisted, and the waiting list for publicly assisted units numbers 6,285. The supply of low-rent and/or assisted units does not meet the demand. There is a great disparity between the number of households earning less than \$10,000 and the actual number of low-rent units.

The second issue is the availability of homes which meet the criteria for loan assistance and mortgage insurance. It is true that the housing market is tight in some areas of the State, particularly in the major cities. However, in the rural areas of the State where vacancy rates are higher (particularly in the eastern region), the issue becomes more complicated by one of housing condition. In many instances, the poor condition of the vacant homes preclude the use of federal mortgage insurance programs. Without these programs, homes are not easily financed and are consequently out of reach for many potential home buyers. The result is a diminished supply of affordable homes.

The third availability issue is the shortage of affordable homes on the market for low- and moderate-income people. This is of particular concern in the major western Montana cities, which tend to have the lowest vacancy rates in the State and the highest home values (according to the 1990 Census). Where the market is tight and prices are escalating, it is becoming increasingly difficult for low- and middle-income people to purchase homes.

To get an overall picture of the availability of housing units, Table 2.6, on the following page combines data on both rental and owner-occupied housing. This table uses 1990 Census information on rental units by price range and value of owner-occupied housing units. The table adds the number of rental units available for under \$300 and homes valued at less than \$35,000. This number of housing units is then compared to the number of households earning less than \$15,000. The lack of available housing can be seen in the last column. Overall, these numbers point to a large gap between the demand for housing and the supply of affordable housing, perhaps as high as 25,000 units.

### NEEDS ANALYSIS

The various surveys addressing several dimensions of housing in the State also uncovered additional specific needs. Each are reviewed below.

### SURVEY OF MONTANA'S HOUSING NEEDS

The *Survey of Montana's Housing Needs* was designed to collect specific data from knowledgeable housing specialists throughout the State, such as vacancy rates, local needs, and opinions related to impediments and barriers to affordable housing in Montana. Most of the quantitative questions requested ranking the degree of the issue (problem or need). There also was a series of questions related to the inventory of homeless facilities and a set of open-ended questions soliciting general responses. All are reviewed below (except the inventory data presented earlier).

<b>TOTAL</b>	<b>169</b>

The Housing Needs survey solicited input from a very broad cross-section of Montanans involved in housing issues, whether construction, sales, lending, program administration, planning, or public policy. It also included responses from State and local agencies associated with health, environmental services, disability, public instruction, Indian Affairs, councils on aging, low income coalition, and others. Table 2.27 above, presents a summary of the number of respondents by occupation.

OWNER-OCCUPIED	165	0	1	9	22	44	61	28	

One of the first issues requested related to type of general housing problem. In earlier CHAS documents, Montana identified four basic problem areas related to housing. These are availability, affordability, accessibility, and suitability. Respondents were requested to categorize the severity of each problem as they relate to rental housing and owner-occupied housing. Table 2.8, above, presents the results. Respondents indicated that rental housing is moderately expensive to very expensive, is somewhat unsuitable to not suitable, and generally not very accessible to the disabled. Most interestingly, nearly 90 percent of respondents (150 of 170) indicated either 'very short' or 'extreme shortage' for rental housing. This implies that Montana lacks an adequate supply of rental housing at any price and, therefore, has critical shortages of affordably priced rental housing. While not as severe, owner-occupied housing is also in short supply, with prices generally too high to be classed as affordable.

**TABLE 2.9**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**CHANGE IN POPULATION BY GEOGRAPHIC AREA**

	NUMBER OF RESPONDENTS					Total Respondents
	NE	SE	C	NW	SW	
YES	4	11	17	28	29	89
NO	13	6	19	10	18	66
TOTAL	17	17	36	38	47	155
<hr/>						
AVG % CHANGE (IF YES, THEN % CHANGE)	7.5%	7%	11.13%	13.12%	10.93%	

The reasons for these problems are many, and often these issues are made more critical by sudden changes in the level of population moving into or out of a particular region. Surveyed individuals were asked as to what degree their local population has increased since the 1990 Census. Table 2.9, above, presents respondent opinions related to the percent change in the level of local population since the 1990 Census was taken. While a majority of respondents saw not change in population in the northeast section of the State, others sensed significant changes in population, such as the northwest and southwest portions of the State.

Respondents were also asked about the impact on cost of housing of building and energy efficiency codes, and zoning regulations. It is the opinion of the group that these types of public policy issues do not appreciably affect the cost of housing. The vast majority noted that these had no effect on the cost of housing, one indicated that these types of actions decrease the cost, and 10 to 13 respondents noted that these actions can increase the cost. One can deduce that these policy increase the initial cost of housing modestly. Table 2.10, below, presents this data. As an anecdote, current Least Cost Planning arenas, related to electric and gas utility planning and resource acquisition activities, generally have recognized that by increasing the energy efficiency of housing, additional up-front costs are placed on the structure. However, these costs typically pay for themselves over the life of the home and "energy efficiency measure."

**TABLE 2.10**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**EFFECTS ON COST OF HOUSING BY PUBLIC AND PRIVATE POLICY ISSUES**

Factor	NUMBER OF RESPONDENTS						Total Respondents
	Decrease Cost		No Effect		Increase Cost		
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Building Codes	1	1	11	72	44	19	161
Building Energy Efficiency Codes	1	6	12	67	49	13	159
Zoning Regulations	2	2	4	80	37	21	156

The question related to the impact on housing of building and zoning codes was approached from an alternate perspective. Respondents were asked if these types of public policy issue impact the *availability* of housing in their local jurisdictions. Table 2.11, below, presents the findings of this question, by geographic region. Note that nearly one third of the respondents do feel that these public policies restrict availability of housing. In particular, the

northwest region respondents feel much more strongly that building and zoning regulations tend to impact the availability of housing.

**TABLE 2.11**

Total Respondents	17	19	38	41	49	164

Respondents were also asked to review and rate the degree of need by various types of in-need groups. The results of this question indicate that, given the incidence of certain types of in-need groups, some needs appear more critical in one area than in another. In Table 2.12, above, the degree of need for the elderly and mentally or physically disabled is rated more urgent than those of the AIDS/HIV infected, the alcohol or drug addicted, or specific racial minorities. There appeared no clear opinion emerging from evaluation of need of housing for the homeless. One must emphasize that, given the wide disparity of need and economic conditions around the State, one local jurisdiction may have a severe need that is inconsequential in another.

**TABLE 2.12**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Group	NUMBER OF RESPONDENTS						No Need	Total Respondents
	Severe Need			Some Need				
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Elderly	11	32	52	45	15	9	1	165

Alcohol or Drug Addicted	9	14	15	33	29	42	17	159
Racial Minority	11	3	13	38	31	38	29	163

Surveyed individuals were also asked about the degree of need for certain types of rental assistance programs. Besides details on homeowner or first-time buyer issues, review of the data provides insights into renter assistance programs. Table 2.13, on the following page, presents an evaluation of the degree of need, by type of program.

As seen in the above table, all types of rental assistance are needed, as nearly all are considered in nearly extreme or extreme states of need. This question confirms the notion

identified above, as it relates to the extreme shortage of rental housing. In further quantifying the degree of need for rental housing, Table 2.14, above, presents the reported vacancy rates in rental housing, by general geographic area. Note that as one moves from east to west, the incidence of rental vacancies declines.

With increases in population, declines in rental vacancy rates, and increasing needs for rental programs indicated, one may reasonably assume that affordably priced rental property is disappearing. Table 2.15, on the following page, indicates what respondents feel has been the degree of change in rental prices since the 1990 Census was taken. But these statistics do not portray all the real problems being experienced in the State. Some areas have decaying housing stock, and declining rental prices. Table 2.16, also below, indicates the degree that rental prices have fallen. Note that there does appear a contrast between needs in the east and needs in the western portions of the State when viewing the data from this single perspective. None of the respondents indicated declines in the rental prices in the western portion of the State.

Table 2.17, also below, presents a summary of the reported rental prices, excluding local utility expenses, as reported by the respondents.

For the survey of Montana's housing needs, respondents were asked to provide comment on several open-ended questions. The following presents a summary of these comments.

**QUESTION:** What opportunities for creating affordable housing in your area exist due to area market conditions?

**RESPONSE:**

Respondents indicated that few opportunities for creating affordable housing exist due to the area's market conditions. They felt that current county, city, state, and Federal organizations do not go far enough in alleviating the housing shortage in Montana. Further, the state needs to incorporate new programs and enhance existing ones to increase rental availability and home ownership. For example, a potential barrier to home ownership is the continuation in large single-family homes of elderly persons who may need assisted living conditions. By creating living space for elderly persons between total independence and nursing home care, many homes can become available as rentals or sale. Young families or larger families in need of more space would have the opportunity to buy or rent.

The high cost of land, lumber, construction make housing projects in Montana expensive. Most housing projects cost over \$100,000. One response taken from Montana's Housing Survey defines "affordable housing" with the value of less than \$100,000 for a home. Some Montanans feel that taxes and lack of investors in combination with limited lot availability contribute to Montana's housing problems. Taxes are reaching the point where some Montanans are having to move out of the area. Rental rates and resale values of a seller's market do not make it feasible to build or repair existing older housing. The banks are willing to help since interest rates are low, but financing and property taxes alone are a burden. One suggestion offered related to freezing property tax or incorporation of a tax incentive which would increase private investors' and developers' interest to build.

In regard to single-family homes, the short supply of rental and multifamily housing have driven some area home prices up by 20 percent. Responses from landlords show a mutual feeling that many rentals already exist, but that the law of the State gives tenants too much authority making it costly for the landlords to collect rent or evict tenants. Therefore, the landlords are unwilling to invest in construction of new units. Instead, rent prices are increased, making available homes unaffordable because of low income. Interest rates are low, but the down payment and closing cost are excessive burdens to those looking to buy.

**QUESTION:** What barriers for creating affordable housing in your area exist due to area market conditions?

**RESPONSE:**

Land cost, lack of sites in close proximity to services, shortage of rentals, and development costs in outlying areas all represent barriers to potential construction of affordable housing. Lots that are available are too expensive due to scarcity. The majority of people who can afford the high prices are the newcomers who are bringing in the high dollar equity from the West Coast sales, thus pushing up the demand for local home sales, while inflating home values. The demand for good home sites exceeds the supply.

The number of rental vacancies is low while the high average purchase price of homes forces people to remain in rentals. Housing costs exceed the income level of most local prospective buyers. The majority of homes being built seems to concentrate on more expensive, larger, single-family homes -- especially for newcomers who are willing to pay higher prices. The direction that developers are taking makes it difficult for the elderly, single parents, and low-to moderate-income persons to find affordable housing.

Those who are able to find a house to rent or buy are often unable to afford it. Buyers find it especially difficult to finance a home with all the bank and government regulations and compliance issues. The limitations and/or restrictions on home ownership programs do not

alleviate the high cost of housing for families on fixed incomes. The market condition and housing vacancy rates support persons who can afford to pay mortgage rates of \$650 or more. Without a loan, prospective buyers are unable to fulfill down payment requirements.

**QUESTION:** What organization or institutional barriers to affordable housing exist in your area?

**RESPONSE:**

The way in which institutions and organizations handle and develop funding priorities or criteria for selecting housing projects do not expand safe, decent, and/or affordable housing where it is needed. City, county, state, and federal resources and programs are not adequate in response and identification of housing problems. Most state program organizations lack the interest that is needed to initiate a program to deal with the housing issues. Programs tend to focus on affordable housing as what 80 percent of the median income can afford rather than those on AFCD, etc. Local governments lack fiscal assistance and commitment. There are no zoning incentives, or an affordable housing requirement. City zoning regulations prohibit and discourage mobile homes, in-fill, and multifamily development. Funds are lacking in the area of rehabilitation of existing homes. Most rentals are old and landlords do not reinvest or maintain the interior or exterior of the structure. Taxes and sewer extension costs increase the building expenses outside city limits, where land is affordable and regulations are more "friendly."

**QUESTION:** What things might best facilitate solving your area's housing problems?

**RESPONSE:**

Any significant solution to facilitate the affordable housing crisis will involve all sectors of the State. Financing from local lenders is required for both the acquisition and development loans and the permanent financing for home buyers. The specific barriers such as the application process, financing, and zoning will need to be addressed both on the local and State levels. Local banks need to look beyond seeking just CRA credits. The development of affordable housing is a capital-intensive business, therefore, the issuers of debt must be willing participants. Affordable housing is the key element of local infrastructure. You must have affordable housing to maintain local jobs. The economy is unstable and jobs are important to investing in housing or upgrading existing homes.

Since home prices can't be lowered, a tax incentive or some sort of builder's incentive would boost the sales of family units within the HUD limit. To counterbalance, HUD should raise the area limit. County officials can promote and assist in allowing construction of rental units that rent for prices commensurate with local area residents' income. Rental and down payment assistance should be offered to facilitate low income residents and elderly adults with rental disabilities. A thorough assessment needs to be incorporated to address Montana's housing dilemmas in all categories.

**QUESTION:** Are there gaps in the delivery of programs and resources in your area?

**RESPONSE:**

Local governments are beginning to address the issue of efficiency of programs delivery and resources. HUD guarantees loans that can extend to \$75,500, but the average home selling price is \$114,603. Homes that are affordable (\$70-\$80,000) might not meet HUD guidelines. Non-profit organizations are over-extended in their ability to serve a population that is growing because of newcomers, and the private sector is slow to respond to the housing issues. Programs need to be administered with consistency and simplicity. The general public is not

aware of the programs available and those programs that are available lag behind in demand and are too complicated. Some individuals feel program requirements are too time consuming and difficult.

The efficiency of programs is not the only resource that is failing. Transitional housing of any kind is lacking for homeless, HIV infected, handicapped, and drug and alcohol addicts. Most federal programs make it too difficult to apply because of match fund requirements for the project, thus ignoring smaller communities with less money and a smaller population. Programs and resources need to be fully available to all in the State of Montana.

## MONTANA HOUSING SURVEY

The *Montana Housing Survey* was designed to collect specific data from a randomly drawn sample of Montana citizens. The data related to housing conditions, inventory, cost, demand, needs for assistance, and suggestions as to preferred policy directions. Other household and structure data, not yet completely analyzed, will be included in future releases of the CHAS. Most quantitative questions related to ranking the degree of need, or problem, being experienced in the local community.

Since the survey was drawn on a random sample, statistically valid generalizations can be made about the opinions of Montana's citizens, as well as about housing throughout the State. The sample selected was approximately 3,600 households; and, to date, about 1150 respondents have returned their surveys.<sup>36</sup> The following tables present preliminary results of the findings of the survey; more formal conclusions will be delayed until all respondents have had an opportunity to respond to the instrument.

One of the first issues requested related to type of general housing problems. In earlier CHAS documents, and several times herein, Montana has identified four basic problem areas related to its housing stock: availability, affordability, suitability, and accessibility. Prospective respondents were asked to categorize the severity of each problem as it relates to rental housing and owner-occupied housing within their local communities.

Table 2.18, below, presents a tabulation of the responses. Note that, consistent with other needs assessment activities, rental housing is considered critically short, with nearly 70 percent of respondents indicating extreme positions.

---

<sup>36</sup> It is expected that, since follow-up letters were sent out near the end of September, 1993, additional instruments will be returned.

**TABLE 2.18**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**DEGREE OF HOUSING PROBLEMS**  
**BY TENURE**

		NUMBER OF RESPONDENTS						
		AVAILABILITY						
		PLENTIFUL						SHORT SUPPLY
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
RENTAL HOUSING	1,094	17	20	36	102	165	265	489
OWNER OCCUPIED	1,069	68	78	115	207	224	217	160
		AFFORDABILITY						
		UNDERPRICED						VERY EXPENSIVE
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
RENTAL HOUSING	1,082	14	16	94	292	230	208	228
OWNER OCCUPIED	1,066	9	23	85	284	239	249	177
		SUITABILITY						
		VERY SUITABLE						NOT SUITABLE
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
RENTAL HOUSING	1,074	21	48	116	281	275	215	118
OWNER OCCUPIED	1,046	43	124	233	368	164	76	38
		ACCESSIBILITY						
		VERY ACCESSIBLE						NOT ACCESSIBLE
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
RENTAL HOUSING	1,021	11	19	36	153	201	375	226
OWNER OCCUPIED	1,008	8	16	28	168	206	394	188

In regard to affordability, respondents indicated that rental and owner occupied housing was moderately to extremely expensive; respondents are heavily weighted toward "very expensive". In general, owner occupied homes fared better in suitability ratings, with a sharp peak of opinions at the middle. This implies a very large stock of homes that, while structurally habitable, appear to demand increased maintenance. Overall, Montana's stock of homes, both rental and owner occupied, have fairly significant accessibility problems.

The implications of these rates seem to indicate that Montana's need and want, more affordably prices homes, that the existing stock needs upgrading and rehabilitation, and that many more units need to be accessible to Montana's disabled.

The sample of randomly drawn citizens were also asked to rank the degree of need a set of in-need groups ten to have within their local communities. Table 2.19, below, presents the preliminary findings of this inquiry. All categories of in-need groups were classed a having at least some need; however, citizens leaned one way or another on each. In regard to the elderly, Montanans feel that there is some need, but respondents were weighted more toward higher levels of need, with over twice as many indicating severe need as no-need. While feelings related to the disabled are similar, fewer people had moderate feelings and grater numbers had extreme opinions related to no need and severe need. Here, opinion favors the higher level of need.

**TABLE 2.19**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Group	NUMBER OF RESPONDENTS							Total Respondents
	Severe Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Elderly	100	143	233	266	159	107	43	1,051
Mentally or Physically Disabled	120	143	212	229	116	126	81	1,027
Homeless	176	118	136	157	104	181	163	1,035
AIDS/HIV Infected	68	50	67	165	88	200	324	962
Alcohol or Drug Addicted	65	73	118	223	121	185	201	986

Opinions related to homelessness are not uniform; there are large numbers of opinions at either extreme and in the center. The precise reason for this tri-modal response has not yet been evaluated, but there may be geographic preferences yet to uncover. In regard to the AIDS/HIV infected group, opinions were quite strong that there was little, if any, need. While this type of response could be interpreted as bias, one must recall that the AIDS/HIV infection problem is very small in Montana and is dwarfed by other more visible social demands. A similar, though less extreme position, is evident in regard to the alcohol and drug dependent.

Respondents were also asked to classify the degree of need for a variety of housing programs. As in all previous assessments, more low rent rental units and affordably priced single family homes are considered as most important. Low cost group care for the elderly also appears to be favored by a majority of citizens. Each of these are present in Table 2.20, below.

**TABLE 2.20**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**DEGREE OF NEED FOR HOUSING PROGRAMS**

Type of Assistance	NUMBER OF RESPONDENTS							Total Respondents
	Extreme Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Repair and Maint Assistance	145	171	238	207	130	73	72	1,036
Rental Assistance	194	179	208	199	104	87	71	1,042
Construction of low-rent Rental Units	320	186	184	119	73	80	84	1,046
Rehabilitation of Rental Units	149	185	231	187	95	88	87	1,022
Rehabilitation of Single Family units	161	185	215	220	94	74	72	1,021
Low-rent Group care for Elderly	231	213	203	178	88	61	57	1,031
Assistance for mobile home owners	141	121	183	204	114	117	118	998
Construction of affordably single family units	322	237	156	136	72	61	58	1,042

Respondents were also asked to vote "yes" or "no" to whether building and zoning codes adversely affect the affordability of housing and the availability of housing in their local area. A majority indicated that neither type of public policy adversely affects housing. However, this piece of the survey needs to be evaluated on a substate basis, as in rapidly growing communities, such arguments surface very often; and very few counties have adopted zoning regulation.

Furthermore, many counties in Eastern Montana Have little or not subdivision review and inactive or non-existent planning boards and staff. In the larger western towns, this is not the case.

**TABLE 2.21**  
**RANDOM SAMPLE OF MONTANA CITIZENS**  
**ADVERSE EFFECTS OF BUILDING AND ZONING REGULATIONS**

	BUILDING CODES		ZONING REGS	
	YES	NO	YES	NO
AVAILABILITY	264	767	314	725
AFFORDABILITY	367	667	332	705

### MONTANA HOUSING OPINION SURVEY

Recipients of this survey were selected from professions dealing with housing and land use planning issues. The purpose of the survey was to obtain opinions from all interest groups involved in housing regarding what factors foster, or can foster, affordable housing and what factors act as barriers. At least one person representing the local government in each municipality and county was sent a questionnaire. All planners and administrators of housing rehabilitation and housing authorities were sent a questionnaire. Where a municipality or county was not represented by a planner or housing administration the mayor of the municipality or chairman of the county commission was contacted. In addition, a sample of one out of six bankers and all realtors and homes builders on the Comprehensive Housing Affordability Strategy (CHAS) FY93 mailing list were contacted. A total of 320 people received the mailed surveys.

In addition to the Housing Opinion Survey, each local planner and housing administrator was mailed a second questionnaire intended to provide statistical information about the housing stock and the status of planning and land use regulation in the community. Ninety three surveys and 40 supplements were returned.

Survey recipients were asked their perception of the housing demand, supply, and the degree of interest by developers for providing housing for six categories of housing type in their community. Recipients were asked to rank the degree on a five point scale, with 1 the lowest and 5 the highest. Table 2.22, below, presents the results of the survey.

**TABLE 2.22**  
**RATED HOUSING DEMAND, SUPPLY, AND DEVELOPER INTEREST**

	Demand	Supply	Developer Interest
Low-cost housing to rent	4.3	1.4	1.8
Low-cost housing to buy	4.1	1.5	1.7
Avg-priced housing to rent	4.1	1.6	2.0
Avg-priced housing to buy	4.0	1.8	2.4
High-end housing to rent	2.8	2.0	1.9
High-end housing to buy	2.9	2.6	2.7

Table 2.22 shows that the demand for low-cost and average-priced housing, both for rent and for purchase is extremely high. The demand for high priced housing was considerably less. The supply of low-cost and average-priced housing was scarce on a statewide basis. Paralleling the lack of supply of housing is the respondents perception that developers have little interest in meeting the demand for low and moderate prices housing. The disparity between the demand for, and the supply of, low and moderate cost housing is dramatic.

Of all respondents, 64 percent reported both highest demand and lowest supply of affordable housing. There was little difference in demand between rental or owner housing, but the most severe disparity between demand and supply was in low cost rental housing. Of the respondents that reported d both high demand and low supply of low cost housing, 53 percent also reported that there is practically no interest by developers in producing low cost units. Only 23 percent of respondents reported equal supply and demand for high end housing, 16 percent for average price housing and 7 percent for low cost housing. Those reporting equal supply and demand for low and average cost housing were very small towns and communities the decline economies in eastern Montana. Over 55 percent of the respondents reported a rental vacancy rate near 0 percent. Those who reported available housing were, again, generally in eastern Montana and the Hi-line area.

Although there were exceptions, most respondents believe that high construction cost of housing, particularly the high cost of building materials, is a major factor that prevents low and moderate income families from obtaining affordable housing. High costs of land were cited frequently, especially by realtors and builders. Many respondents indicated that lack of employment or low paying jobs in the community were the reason for low incomes that are insufficient to purchase or rent good housing. Most feel that meeting down payments and closing costs is a barrier for low income people. Because of low incomes, people are not able to meet credit requirements or other qualifying criteria.

Most respondents in all the occupations feel that developers are not trying to build low cost housing because of current strong markets in higher-priced housing coupled with the fact that low income housing provides a poor return on investment. A fairly commonly expressed factor was higher-income non-resident home buyers' willingness and capacity to pay high prices or rents is driving up housing prices in many ares of Montana.

Respondents in all occupations believe that lack of available land is a problem, although there is a difference in perception why land is not available. Some cited that fact that a community is surrounded by public land, tribal land, or by private land where owners are unwilling to sell for housing development. Other cite the need to extend city utilities, or that zoning did not provide enough available land, especially for multi-family and mobile home development.

Solutions commonly indicated by all occupations include providing more affordable financing, including rent and home subsidies, raising the limits on US Farmers Home

Administration programs. Another fairly common solution is to provide assistance to builder and/or home buyers. Some respondents mentioned low cost loans, subsidies, or financing packages for developers of low cost housing.

#### STATE ADMINISTERED SECTION 8 HOUSING

An indirect measure of affordability and availability can be found by inspecting the Section 8 waiting lists. In Montana, the list was last prepared on September 30, 1993. Table 2.23, at right, presents the current number of households on the waiting list. This list, while last purged on July 7, 1993, is open at all times.

**TABLE 2.23**  
**STATE ADMINISTERED SECTION 8**  
**WAITING LIST**

Bedrooms	# on Waiting list
1 Bedroom	1,466
2 Bedrooms	2,831
3 Bedrooms	1,570
4 Bedrooms	178
5 Bedrooms	19
6 Bedrooms	3
<b>TOTAL</b>	<b>6,067</b>

Of those on the list, about 55 percent have one or more federal preferences. The complexion of the list is simply dependent upon those who apply. However, upcoming decline in the number of available certificates and vouchers is expected to alter the complexion of the waiting list. These new influences are anticipated to be from the fact that units are now linked to family self sufficiency and certificates and vouchers are now open to single person households. The latter is anticipated to swell the total waiting list to 10,000 households.

In FY 1992, the number of households on the waiting list amounted to 5,250. Therefore, between 1992 and 1993, there was a 16 percent increase in the waiting list. This implies that the housing market is not providing enough affordably priced rental property to adequately handle demand and household formation. This, in turn, leads to further pressure on rental prices.

Regrettably, as of October 1, 1993, Fair Market Rents (FMRs), the values upon which the level of assistance provided to renters under Section 8 Housing, were adjusted downward. Some of Montana's communities suffered significant declines nearly \$100 a month or more. Montana fears that this may contribute to risks of homelessness for many people; and, the State intends to track Section 8 tenants to determine if this risk bears itself out.

#### ii. STRATEGY DEVELOPMENT - INVESTMENT PLAN

The State of Montana has a wide array of programs it intends to implement, deliver, or manage throughout the upcoming five-year period, as they pertain to securing affordable housing opportunities for renters and homeowners. These are briefly reviewed below. The program descriptions are followed by an overall listing by activity type.

### **HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The program expands the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdictions, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include tenant-based rental assistance; assistance to first-time home buyers; property acquisition; new construction (justification required for neighborhood revitalization, special needs); reconstruction, relocation, or demolition; moderate or substantial rehabilitation; site improvements; and other activities related to development of non-luxury housing, such as transitional housing.

All states, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization,

economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income families to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. Transitional housing is included. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

## **HOPE 1 (Public Housing Homeownership) Program**

The HOPE 1 Program is to assist in providing affordable homeownership for residents of public and Indian housing. HOPE 1 funds are available in planning and implementation grants. Eligible activities for planning grants include: replacement housing; development of resident councils; counseling; training and technical assistance; underwriting feasibility studies; preliminary architectural work; and development of security plans.

The maximum planning grant amount is \$200,000, and it does not require matching funds. Mini planning grants are available. With implementation grants, a grantee can fund rehabilitation; replacement reserves; legal fees; relocation; economic development activities; and administrative and operating costs. Implementation grants support the cost of developing the housing. There is no cap on overall grant amounts, but some eligible activities are capped. This type of grant requires non-federal matching funds. Both grant types are awarded on a competitive basis.

Resident management corporations, resident corporations, cooperative associations, public or nonprofit organizations, public bodies or agencies, Public Housing Authorities, and Indian Housing Authorities are eligible to apply for HOPE 1 grants.

*Contact person: HUD-Denver, Office of Public Housing (303) 844-4762.*

## **HOPE 2 (Homeownership of Multifamily Units) Program (Title IV)**

The HOPE 2 program was authorized in subtitle B of Title IV of the National Affordable Housing Act of 1990. Program funds are to be used to assist in developing homeownership opportunities for low-income persons by providing planning and implementation grants to organizations that will help families purchase and maintain units in multifamily projects. The projects must be owned by the government, FHA-distressed, or subject to mortgages that are insured or held by HUD. Resident councils, resident management corporations, cooperative associations, mutual housing associations, public or private nonprofit organizations, public housing agencies and Indian housing authorities are eligible to apply. Joint applications may be submitted. Grants are awarded competitively. Planning grants can be no more than \$200,000, while mini planning grants may be only \$100,000. They can be used for: development of resident councils; counseling; training and technical assistance; underwriting feasibility studies; preliminary architectural work; and development of security plans.

Implementation grants must be matched with non-federal funds that are at least 33 percent of the grant amount. The maximum implementation grant is based on the present published Section 8 Existing Fair Market Rents over a 10-year period. These grants can fund: rehabilitation; replacement reserves; legal fees; relocation; economic development activities; administrative and operating costs; and acquisition.

*Contact person: Lois Tressler, Office of Housing, HUD-Denver Regional Office (303) 844-4959.*

### **HOPE 3 (Homeownership of Single Family Homes) Program**

HOPE 3 provides financial assistance for homeownership. Planning grants may be used for feasibility studies, technical assistance for grant recipients, researching the availability of properties, preparing applications for implementation grants, and program planning. HOPE 3 implementation grants may be used for the following: acquiring and rehabilitating property; assisting first-time home buyers in purchasing units; economic development to promote self-sufficiency of home buyers; administrative costs; replacement reserves; and home buyer outreach selection and counseling. Eligible sources for housing are single family residential properties currently owned or held by HUD/FHA, VA, RTC, FDIC, DoD, GSA, DoT, FmHA, all other federal agencies, and state or local governments (including their agencies).

HOPE 3 eligible applicants include private nonprofit organizations, public agencies, cities, states, counties, and PHAs or IHAs in cooperation with a private nonprofit or cooperative association. Grants are awarded competitively: planning grants within a national pool, implementation grants in a regional pool. Planning grants cannot exceed \$100,000; implementation grants must be under \$3 million.

*Contact person: David Jacobs, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **HOPE for Youth (YOUTHBUILD)**

The HOPE for Youth program was created as section 164 of the Housing and Community Development Act of 1992, which added it as a new subtitle D to the 1990 National Affordable Housing Act. Under YOUTHBUILD, the energies and abilities of youth who have dropped out of school or are in danger of dropping out would be utilized to develop permanent and transitional affordable housing for low-income families and the homeless, and to reconstruct urban neighborhoods. The program is geared toward young men and women aged 16 to 24. It provides academic and basic skills in preparation for a high school equivalency diploma and construction trades training. Half of the youth's time will be spent working and the other half would be spent in the actual construction or rehabilitation of housing under the supervision of trained and licensed construction workers. Regulations for this program are still being written.

### **Low-income Housing Preservation and Resident Homeownership Program (Title VI)**

The Low-income Housing Preservation and Homeownership Program was authorized in Title VI of the National Affordable Housing Act of 1990. The program provides competitive grants to assure the continuation of Section 221(d)(3) and Section 236 projects, whose low-income use restrictions could otherwise expire after 20 years of the final mortgage endorsement. The grants are financial incentives to retain project-subsidized housing projects, and to encourage sales to purchasers who will keep the property for low-income persons. Resident corporations,

owners of low-income housing, nonprofit organization, state or local agencies, or any entity that agrees to maintain low-income affordability restrictions may apply for funding.

*Contact person: Richard Fox, Office of Housing, HUD-Denver Regional Office (303) 844-5351.*

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

## Energy Programs

Energy program funds are available from the Department of Energy and other agencies. Allocations can be used for rehabilitation and new construction.

### A. Weatherization

Energy costs are one of the greatest demands on a low-income family's resources. During Montana's winter, these costs can exceed rental or mortgage costs. The weatherization program administered by the Montana Family Assistance Bureau is 100 percent funded by the Department of Energy and Department of Health and Human Services. The program is designed to help low-income persons reduce their home heating costs and to conserve natural resources. The funds are directed toward local Human Resource Development Councils (HRDCs) and tribal organizations. These organizations decide where the grant money will be spent to install energy saving measures in the homes of low-income persons. Homes are prioritized based on energy consumption.

Specific measures are decided upon after each home has had an energy audit to determine which activities would be most cost-effective. Measures include insulation, caulking, furnace repair and replacement. All labor and materials are purchased locally. By reducing overall costs, weatherization helps a family stay in their home, increasing family self-sufficiency. Income not spent on utility bills stays in the local economy, as does money spent on labor and materials.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### B. Low Income Energy Assistance Program (LIEAP)

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### C. Energy Efficient Housing Program for New Construction

The Energy Efficient Housing Program for New Construction is planned by the Montana Bureau of Housing and Department of Natural Resources and Conservation as a means to assist

middle-income persons with payments on newly constructed energy efficient housing. It would set up a mortgage insurance pool from which funds could be drawn. FHA would insure the first \$75,500 of the loan at 5 percent interest (their maximum) and the State the rest (also at 5 percent) up to \$97,700 (the IRS-allowed ceiling on mortgages financed with BOH tax-exempt bonds). The FHA maximum mortgage level is \$85,400 in Gallatin County, \$83,600 in Missoula County, \$83,050 in Cascade and Yellowstone counties, and \$75,500 in the remaining counties.

The two loans would total out to 95 percent of the appraised value of the house. There would be a single monthly payment on the loans. The maximum the State would need to insure is the difference between these two amounts, or \$22,200 per house. Houses will most likely fall into the \$85,000 to \$95,000 range. Each house would need certification of energy efficiency to qualify for the loans. The program could start with a \$300,000 appropriation of oil overcharge funds currently available to the State, and would expand the coverage of existing BOH programs. The insurance pool would be sustained with home owner contribution of 3 percent initial and 1.5 percent annual, paid monthly, mortgage insurance premium and utility contributions to the pool. It would be maintained at an initial maximum value of 25 percent of the dollar amount invested in second mortgages.

### **Low Income Housing Tax Credit Program**

The low income housing tax credit is available under Section 42 of the Internal Revenue Code of 1986. The credit was first allocated in Montana in 1987. The federal income tax credit is available to owners of qualifying rental housing which meets stated rent limitation and low-income occupancy requirements. Owners of all buildings, except for certain buildings financed with tax-exempt bonds, must obtain a credit allocation from the appropriate state agency before claiming the tax credit. The Montana Board of Housing allocates the credit for housing located in Montana. The credit allowance for each state will be no greater than \$1.25 per State resident.

The tax credit is for residential rental buildings which are available to the general public and are part of a qualifying low-income project. Ineligible units include transient housing (initially leased for less than six months), buildings of four or fewer units which are occupied by the owner or a relative of the owner, nursing homes, life care facilities, retirement homes providing services other than housing, dormitories, and trailer parks.

The tax credit may be used in conjunction with the construction, substantial rehabilitation, or acquisition and substantial rehabilitation of qualifying residential rental housing.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

## MONTANA BOARD OF HOUSING PROGRAMS

The Montana Board of Housing was created by the Montana Housing Act of 1975 in order to alleviate the high cost of housing for low-income persons and families. The funds to operate the programs administered under the act are generated through either the sale of tax-exempt bonds or from administrative fees. The board's programs fall into two categories: home ownership and multifamily programs. Each are described below.

*Contact person (all Montana Board of Housing programs): Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### HOME OWNERSHIP PROGRAMS

#### **Single Family Bond Program (initiated in 1977)**

The Board of Housing works with approximately 80 lenders statewide to provide mortgages 1.5 percent below conventional rates to assist primarily first-time home owners. In certain target areas, the borrowers need not be first-time purchasers. The program has assisted over 18,000 Montanans to date, at a rate of 1,000 to 1,500 purchases per year. Average household income for the program is \$27,290, with a maximum family income limitation established by the BOH. Since 1975, \$734 million in bond proceeds have been loaned to home buyers.

#### **Mortgage Credit Certificate Program (initiated in 1987)**

This program enables moderate and low-income individuals to convert 20 percent of their annual mortgage interest expense from an itemization (income deduction) to a federal tax credit (tax payment reduction). Average household income of those served under this program was \$28,466. A total of 2,476 individual and family households have been assisted through this program since inception.

#### **Home Buyers Cash Assistance Program (initiated in May 1991)**

This program provides cash assistance to close a loan for home buyers having an income of no more than \$23,000. Funds may be used for up to 50 percent of the minimum cash required to close a loan (maximum advance of \$1,000), and these funds are combined with 6 $\frac{7}{8}$  percent, 30-year mortgage money. Purchase price of the home may not exceed \$50,000. Since its inception, the program has provided permanent financing of \$4,917,213 for 138 homes. In addition to permanent financing, the program provided \$119,778 in cash assistance with closing costs. Average household income for this program was \$17,209.

**203(k) Rehabilitation Home Mortgage Program (initiated March 1992)**

The Board of Housing set aside \$5 million to provide a firm secondary market for the acquisition and rehabilitation of an existing dwelling not meeting minimum FHA standards. The home is to be owner-occupied with limited business use of the property. The purchaser is to be a first-time homebuyer except for certain targeted areas. This program is conducted in conjunction with the Department of Housing and Urban Development. The maximum loan amount is \$60,000 and family income may not exceed \$30,000. The refinancing of an existing home loan is not permitted. The board has purchased two loans for \$100,750.

**Montana Manufactured Housing Program (initiated September 1992)**

The Board of Housing set aside \$4.5 million to finance single family manufactured housing installed on a permanent foundation on titled (owned) property. Lot cost, well, and septic can be included in the loan. These are 30-year loans with a 7¾ percent fixed rate of interest for first-time homebuyers or single parents (a separated or divorced person that was co-owner of a house) with annual household income at or below \$25,000.

**Disabled Accessible Affordable Homeownership Program (initiated July 1, 1993)**

The board set aside \$3.5 million to provide affordable architecturally accessible homes for people with disabilities such that they can live independently. The board has approved for eligibility 55 applications for individuals/families with an average annual income of \$14,249.

**MULTIFAMILY PROGRAMS****Multifamily Rental Housing Program for Non-Profits (initiated February 1993)**

The Rental Housing Program provides mortgage funds for affordable rental housing for low-income Montanans. It is intended to use capacity and knowledge of local governmental units and non-profits to develop affordable housing to meet local needs. Funds are to be used to provide construction and permanent financing for projects meeting the terms and conditions detailed below. Proposals will be accepted from governmental units and non-profits based on a RFP distributed by the BOH. Due to tax law restrictions, applicants for the pilot project are limited to governmental units or nonprofit subsidiaries of governmental units. Approximately \$50,000 of the \$2.5 million available can be lent to other nonprofit groups such as HRDCs, Neighborhood Housing Services, and other private, nonprofit special needs corporations. The eligible applicant must be the owner of the project, must oversee the construction, and must be the property manager for projects financed under this program. The eligible applicant may contract with private industry for various segments of the project.

### **Multifamily Bond Program (initiated 1978)**

From 1978 until 1982, the Board of Housing issued tax exempt bonds to finance the construction of new, or the rehabilitation of existing, low-income multifamily housing. During that period, the board financed 668 multifamily units for low-income families and the elderly. During FY 1993, the board made preliminary commitments of loan funds through the Multifamily Pilot Program for Rental Housing to non-profit and governmental sponsors of seven projects. These projects total \$2,023,253 in loan funds, \$4,723,005 in projected costs, and will provide 79 units of affordable rental housing. All of the projects are anticipated to be constructed in 1994.

### **Low Income Housing Tax Credit Program (initiated 1987)**

This program made use of federal tax credits to provide incentives to developers to provide low-income housing. Housing built under the program was restricted to individuals with incomes at or below 60 percent of HUD median income. In addition, rents were restricted to 30 percent of monthly median income. The board allocated \$639,735 in federal tax credits for 154 units of rental housing. The city of Billings received 60 of these units, with a total of \$284,169 in tax credits. Three projects allocated credits in FY 1993 were placed in services in that year, as were two projects allocated carryover credits in prior years. These projects total 46 units and \$72,310 in tax credits (projects allocated in FY 1993) and 79 units and \$147,923 in tax credits (projects allocated carryover credits in prior years.) Through FY 1993, the board allocated a total of \$2,917,629 in tax credits for a total of 943 units of rental housing in 38 projects.

## **ELDERLY PROGRAMS**

### **Reverse Annuity Mortgage Loan Program for Elderly Persons (initiated 1989)**

This program enables persons 68 years or older to benefit from an additional income source: their home equity. In addition to other uses, the funds may be used to make repairs or improvements to the home. The program has assisted 14 senior homeowners since it began taking applications. Funds committed to these loans totaled \$364,800. Average annual income for these borrowers was \$7,722.

## **PRIORITY #1 - NON-HOMELESS PERSONS WITH SPECIAL NEEDS**

### **i. ANALYSIS**

Respondents were also asked to review and rate the degree of need by various types of in-need groups. The results of this question indicate that, given the incidence of certain types of in-need groups, some needs appear more critical in one area than in another. In Table 2.24, above, the degree of need for the elderly and mentally or physically disabled is rated more urgent than those of the AIDS/HIV infected, the alcohol or drug addicted, or specific racial minorities. There appeared no clear opinion emerging from evaluation of need of housing for

**TABLE 2.24**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Group	NUMBER OF RESPONDENTS							Total Respondents
	Severe Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Elderly	11	32	52	45	15	9	1	165
Mentally or Physically Disabled	27	33	35	34	25	12	0	166
Homeless	21	18	19	25	25	41	14	163
AIDS/HIV Infected	6	8	12	23	11	44	45	149
Alcohol or Drug Addicted	9	14	15	33	29	42	17	159
Racial Minority	11	3	13	38	31	38	29	163

the homeless. One must emphasize that, given the wide disparity of need and economic conditions around the State, one local jurisdiction may have a severe need that is inconsequential in another.

As housing has become more scarce and less affordable, people with disabilities have joined many others on waiting lists for low-cost rental units and other subsidized units. Disabled accessible units that are not subsidized are usually more expensive because of the increased square footage required for wheelchair accessibility and other modifications.

The primary concern for disabled people is accessibility. Many of the units in the State were constructed without adequate accessibility. Many disabled people requiring disabled accessibility would prefer to remain in existing homes or apartments. These units often require renovation for access. Usually, disabled people do not have the income to pay for the necessary renovation and for the removal of the renovations (as required by the ADA), should they move elsewhere. As a result, many disabled people are living in units that do not meet their basic needs for accessibility.

The need for accessible units is compelling across the State. In Great Falls, the Mobility Impaired Task Force has been trying for two years to get funding to build 24 units. Missoula is rapidly becoming a regional center for disabled people, as it offers strong medical and rehabilitative services. Missoula succeeded in building these 24 units of mobility-impaired housing in the summer of 1992. It was full within six weeks of opening, and now has a long waiting list. Given the shortage of affordable accessible units, young adults with disabilities tend to live at home. Again, remodeling to fit their needs is prohibitively expensive.

Over the past twenty years, Montana has deinstitutionalized many people with mental illness or developmental disabilities. Group homes have been established in some areas to help meet the needs of the developmentally disabled. In Helena, this housing is extremely limited. Little corollary effort has been made to secure housing for the deinstitutionalized mentally disabled. Particularly in those areas where housing is tight, the mentally disabled are forced to compete with all the other low-income populations for scarce housing and housing assistance.

An additional requirement of the Americans with Disabilities Act is "reasonable accommodations." Problems may arise as to the extent services are needed, expected, and legally required. This consideration could dissuade landlords or developers from accepting people with disabilities.

Because of the Americans with Disabilities Act (ADA), housing accessibility has become a visible need across the State. Accessibility is a problem unless the unit was specifically built for people with disabilities. Modification of existing rental units is difficult to accomplish and the modifications must be removed and the unit restored to its original condition when the disabled tenant leaves. Most people with disabilities cannot afford to do this, and landlords are often unwilling to incur long-term expenses for prospectively short-term tenants. Resolution of this issue presents a challenge for all involved.

The Governor's Office on Aging was contacted regarding the housing needs of the elderly in Montana. Robert Bartholomew, program manager, provided the Statewide Aging Plan and "Aging in Montana," a study of the self-identified needs of older Montanans. He said that the Older American Act does not cover housing; it covers mostly services, meals etc. Assisting the elderly with housing is listed as an objective in the State plan and Montana's Older Americans Act (1987).

The Developmental Disabilities Division of SRS was consulted for information regarding the housing needs of persons with developmental disabilities. They were able to provide close estimates of the number of developmentally disabled citizens in some need of supportive housing. For the physically disabled, Montana does not have a centralized agency for information on their housing needs. The Montana Independent Living Center (MILC) and the Montana State University affiliated Rural Institute on Disabilities were also contacted for their estimates.

A steering committee meeting was the original source of information on lead-poisoning in children. Gertrude Downey, who attended the meeting, recommended John Downey for detail on the Butte Lead Prevention Program, who had recently purchased an analyzer for lead-based paint. The analyzer would be used for the Montana Childhood Lead Poisoning Prevention Program. The proposal for this program, provided by the Preventive Health Services Bureau, included the plan for medical case management of lead poisoned children.

Jim Murphy, surveillance coordinator with the Department of Health's STD/AIDS division, assisted in ascertaining the prevalence of AIDS in the population and the survival rate. He did not see a big need among AIDS victims for housing assistance, but provided a packet of information which he sends to interested parties.

The Department of Corrections and Human Services' Mental Health Division was consulted for an assessment of the housing needs of the mentally ill in Montana. Much of the details available were found in the 1991-94 Statewide Mental Health Plan, provided by the Mental Health Division.

## **ii. STRATEGY DEVELOPMENT - INVESTMENT PLAN**

### **Reverse Annuity Mortgage Loan Program for Elderly Persons (initiated 1989)**

This program enables persons 68 years or older to benefit from an additional income source: their home equity. In addition to other uses, the funds may be used to make repairs or improvements to the home. The program has assisted 14 senior homeowners since it began taking applications. Funds committed to these loans totaled \$364,800. Average annual income for these borrowers was \$7,722.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **Disabled Accessible Affordable Homeownership Program (initiated July 1, 1993)**

The Montana Board of Housing set aside \$3.5 million to provide affordable architecturally accessible homes for people with disabilities such that they can live independently. The board has approved for eligibility 55 applications for individuals/families with an average annual income of \$14,249.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **Supportive Housing for Persons with Disabilities (Section 811)**

Section 811 grant monies are awarded to private, nonprofit organizations providing assistance to expand housing with supportive services for persons with disabilities. This often includes group homes, independent living facilities, and intermediate care facilities. Section 811 is targeted for persons with a physical disability, developmental disability, or chronic mental illness which is expected to be of long and indefinite duration, substantially impedes the person's ability to live independently, and is of such a nature that such ability could be improved by more suitable housing conditions.

The program was authorized by the National Affordable Housing Act, Section 811. The competitive grants are available in two forms: capital advances based on the development cost limits published in the *Federal Register*, and project rental assistance to cover the difference between the HUD-approved operating costs and 30 percent of the residents adjusted income. Occupancy is open to very low-income persons between the ages of 18 and 62.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

## **Housing Opportunities for Persons With AIDS**

The Housing Opportunities for Persons with AIDS program (HOPWA) was established by the National Affordable Housing Act. In order to more expeditiously address the pressing needs of persons with AIDS and related diseases, HUD published a July 1992 interim rule. The rule describes two types of HOPWA grants: formula entitlement grants (90 percent of funds allocated) and competitively awarded grants (10 percent of funds allocated). HOPWA grants are to provide states and localities with the resources and incentives to devise long-term strategies for meeting the needs of low-income persons with AIDS and related diseases.

To qualify for a formula allocation, states or eligible metropolitan areas must have more than 1,500 cases of AIDS, a HUD-approved CHAS, and (for EMAs) a population of more than 500,000 people. For states, the 1,500 AIDS cases must be outside state EMAs. In December 1992, \$90 million dollars in assistance was made available for formula allocations.

All localities and states, regardless of population and number of AIDS cases, may apply for grants on projects of national significance. National significance is determined by the innovation of the project compared to other applying projects, and the potential for replication of the project. Funding for five grants to nationally significant projects was announced in August 1992 (*August 25, 1992, Federal Register*). Funding for five other projects was also announced at that time. These funds were aimed at states which did not qualify for formula grants, localities outside of EMAs, and localities inside EMAs that do not have a HUD-approved CHAS. For the FY 1992 competitive grant program, only government organizations could apply for funds. An additional \$10 million for competitive grants is expected to be announced in a later NOFA. Most activities proposed by the applicant will be considered for eligibility.

*Contact person: Bruce Desonia, Sexually Transmitted Diseases/AIDS, Dept. of Health and Environmental Sciences (406) 444-3565; Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

## **HOPE for Youth (YOUTHBUILD)**

The HOPE for Youth program was created as section 164 of the Housing and Community Development Act of 1992, which added it as a new subtitle D to the 1990 National Affordable Housing Act. Under YOUTHBUILD, the energies and abilities of youth who have dropped out of school or are in danger of dropping out would be utilized to develop permanent and transitional affordable housing for low-income families and the homeless, and to reconstruct urban neighborhoods. The program is geared toward young men and women aged 16 to 24. It provides academic and basic skills in preparation for a high school equivalency diploma and construction trades training. Half of the youth's time will be spent working and the other half would be spent in the actual construction or rehabilitation of housing under the supervision of trained and licensed construction workers. Regulations for this program are still being written.

## Supportive Housing for the Elderly (Section 202)

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

### PRIORITY #1 -- HOMELESS PERSONS i. ANALYSIS

#### SUMMARY OF SHELTERED HOMELESS STUDY

Graduate students in the Department of Political Science at the University of Montana, Missoula, prepared a study for the Department of Social and Rehabilitative Services on a portion of Montana's homeless population, the sheltered homeless. The study, completed in May 1993, attempted to count sheltered homeless people in the State. Those living on the street, in institutionalized settings, or doubled-up with friends or relatives in existing housing were not included. The study attempted to provide demographic information on sheltered homelessness, and identify their needs and the services available to Montana's sheltered homeless.

It was conducted by taking a physical count on two separate nights, December 2, 1992, and January 26, 1993, at 40 specified shelters. The study targeted 17 emergency shelters, seven domestic violence shelters, eight runaway youth shelters, and eight voucher systems. Few of the shelters were in northeastern Montana, and none in the southeast. Most surveyed shelters were located in urbanized areas (six in Billings, five in Missoula, and five in Bozeman).

The study concludes that approximately 502 homeless persons seek shelter each day during December and January. It reported that the December count included 548 persons requesting shelter; 461 did so on the January date. On each night, 16 people requesting shelter were turned away, two from the emergency shelters, 14 from runaway youth shelters. Shelters turned away homeless people primarily due to lack of space, and secondly due to behavioral problems. A majority of homeless people (352) are served by emergency shelters, while 70

stayed in domestic violence shelters, 41 in runaway youth shelters, and 23 utilized the shelter voucher system.

A survey instrument completed by the shelter directors asked for information related to age, sex, race/ethnic origin, and family status of shelter clients. The mean age of sheltered homeless persons in Montana is 26 years. Individuals under the age of 19 made up 43 percent of the total sheltered homeless population, with a majority of that group under age 9. Sixty-one percent of sheltered homeless individuals are male, 39 percent female. Females make up a majority only in domestic violence shelters with 67 percent (47 of 70 people). Adults between the ages of 20 and 49 represented 48 percent of the sheltered homeless population, most in their 30s. Only 9 percent of the homeless were over age 50.

Native Americans are disproportionately represented in the studied homeless population. They constitute 24 percent of the sheltered homeless population, yet they make up only 6 percent of the total Statewide population. Whites represented 72 percent of persons in shelter facilities.

Additional information about the homeless in Montana was collected by the University through two questionnaires: the first was distributed to directors and asked their opinion of the make-up and needs of their patrons; the second was offered only to emergency shelter clients with response voluntary. According to the shelter directors, the average length of stay at a shelter ranged from 8 to 20 days; clients stayed longest at domestic violence shelters, ranging from 20 to 37 days. Those using vouchers typically remained only 1 to 5 days.

Shelter directors indicated that the major reasons for an individual's or family's homelessness varied. Sometimes several factors conspired to force the person or household into homelessness. Table 2.25, below, presents the shelter directors' opinions of the percent of their clients citing the following major reasons for their homelessness.

**TABLE 2.25**  
**DIRECTORS' ESTIMATES OF REASONS FOR HOMELESSNESS<sup>37</sup>**  
**PERCENT OF CLIENTS HAVING FOLLOWING REASONS**

REASON CLIENT SEEKING SHELTER	ALL RESPONDENTS	DIRECTOR'S OPINIONS BY TYPE OF SHELTER			
		EMERGENCY SHELTER	DOMESTIC VIOLENCE	RUNAWAY YOUTH	VOUCHER SYSTEM <sup>38</sup>
Domestic Violence	34%	23%	100%	33%	3%
Lack of Job Skills	27%	33%	0%	2%	54%
Substance Abuse	23%	32%	13%	5%	26%
Can't Find Affordable Housing	20%	34%	10%	0%	13%
Deinstitutionalization	7%	11%	0%	4%	6%
Runaway Youth	6%	2%	0%	29%	0%
Public Assistance Problems	6%	13%	0%	0%	1%
Other	14%	8%	0%	24%	26%

Domestic violence was most commonly cited by the shelter directors as the reason for homelessness, but job skills, substance abuse, and affordable housing followed closely. Respondents cited deinstitutionalization, public assistance, problems, other difficulties, and runaway youth less frequently as the reason for their homelessness. Note, however, that some shelters do not take in runaway youth. A similar question was asked of homeless adults at emergency shelters in the voluntary questionnaire. While the data is restricted to a single dimension, this segment of the homeless population provided interesting information. Table 2.26, below, presents emergency shelter client responses.

**TABLE 2.26**  
**REASONS HOMELESS PERSON LEFT LAST RESIDENCE**  
**EMERGENCY SHELTER CLIENT RESPONSES**

REASON	# at EMERGENCY SHELTER	% at EMERGENCY SHELTER
Unemployment	18	23.68%
Moved to Seek Work	15	19.74%
Other <sup>39</sup>	13	17.11%
Family Breakup	6	7.89%
Substance Abuse	5	6.58%
Eviction/Foreclosure	5	6.58%
Low Wages	4	5.26%
Family Rejection	4	5.26%
Inadequate Public Assistance	4	5.26%
Domestic Violence	2	2.63%
TOTAL RESPONSES <sup>40</sup>	76	100.00%

<sup>37</sup> Percentages may not add to 100 percent due to reasons for homelessness; multiple responses were allowed in the survey.

<sup>38</sup> Includes those facilities that offer food, clothing, and other basic necessities but do not operate a shelter of their own. Rather, they administer vouchers to homeless people so they can receive shelter at places such as local motels.

<sup>39</sup> Several responses were mental illness.

<sup>40</sup> This may not equal the total number of persons responding to the question as they were asked to check all that may apply.

As stated in the SRS study, homeless adults are more likely to identify economic-related reasons, such as unemployment or moved to seek work, as the cause of their homelessness. Unemployment in the homeless questionnaire translates to 'job skills' in the shelter director survey. Substance abuse was rated as a less frequent cause by this type of respondent, while domestic violence was rated lowest by shelter clients. The difference between the two tables can be attributed to the limitation of the shelter client survey; it was available only to clients of emergency shelters. Therefore, Montana's homeless are primarily in need of long-term job training and counseling. Transitional housing, permanent housing, and employment were also cited as in great need by shelter directors. Their immediate needs relate to affordably priced permanent housing, medical health services, food, and clothing.

According to shelter directors, emergency shelter (94 percent), food (91 percent), mental health (88 percent), medical health services (85 percent), clothing (85 percent), and help for substance abuse (85 percent) are typically requested and available. Education (79 percent), job training (76 percent), and disability services (61 percent) were listed as moderately available by respondents. But sufficient funding to fully respond to client needs is not available at all facilities.

In the *Survey of Montana's Housing Needs*, respondents were asked to review and rate the degree of need by various types of in-need groups. The results of this question indicate that, given the incidence of certain types of in-need groups, certain needs appear more critical in some areas than others. In the table below, the degree of need for the elderly and mentally or physically disabled is rated more urgent than those of the AIDS/HIV infected, the alcohol or drug addicted, or specific racial minorities. There appeared no clear opinion emerging from evaluation of need of housing for the homeless, as seen in Table 2.27, below. One must emphasize that, given the wide disparity of need and economic conditions around the State, local jurisdictions severe needs differ significantly.

**TABLE 2.27**  
**SURVEY OF MONTANA'S HOUSING NEEDS**  
**DEGREE OF NEED BY IN-NEED CLASSIFICATION**

Group	NUMBER OF RESPONDENTS							Total Respondents
	Severe Need			Some Need			No Need	
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Elderly	11	31	50	40	14	7	1	154
Mentally or Physically Disabled	26	32	34	28	25	10	0	155

Alcohol or Drug Addicted	9	14	15	31	25	40	16	150
Racial Minority	11	3	12	37	30	34	26	153

## **ii. STRATEGY DEVELOPMENT - INVESTMENT PLAN**

### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income facilities to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. Transitional housing is included. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

### **HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The program expands the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdictions, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include tenant-based rental assistance; assistance to first-time home buyers; property acquisition; new construction (justification required for neighborhood revitalization, special needs); reconstruction, relocation, or demolition; moderate or substantial rehabilitation; site improvements; and other activities related to development of non-luxury housing, such as transitional housing.

All states, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

### **Homeless Assistance Grants/Emergency Shelter Grants Program**

The Family Assistance Division's Homeless Assistance grants are to help improve the quality of existing emergency shelters for the homeless, to make available additional shelters, to meet the costs of operating shelters and of providing essential social services to homeless individuals to help prevent homelessness. The grants are 100 percent funded by the Health and Human Services and Housing and Urban Development departments. According to federal law, 95 percent of funds received must be allocated to the 12 regional Human Resource Development Councils (HRDCs). The grants fund the renovation, rehabilitation, or operating costs of homeless shelters, and the provision of follow-up and long-term services to help homeless persons escape poverty. Shelters to be assisted and service to be delivered are determined by the HRDCs. In FY 1993, the department will receive \$115,000 of HUD and \$73,361 of HHS homeless funding.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### **Rural Homelessness Grant Program**

Rural Homelessness grants provide direct emergency assistance, homeless prevention assistance, and assistance for permanent housing. Private nonprofit organizations, Indian tribes, county and local governments may apply. Other eligible areas are all areas outside of Metropolitan Statistical Areas and rural census tract within MSAs. The grants are designed for the following: rent, mortgage, or utility assistance; security deposits; support services; rehabilitation; short-term emergency lodging; transitional housing; cost of using federal inventory property programs; and capacity building.

### **Shelter Plus Care Program**

Shelter Plus Care grants help to provide housing and supportive services on a long-term basis for homeless people with disabilities, especially serious mental illness, chronic drug or alcohol problems, and AIDS. Program grants are used for the provision of rental assistance payments through Section 8 Moderate Rehabilitation (SRO), sponsor-based rental assistance (SRA), tenant-based rental assistance (TRA), or project-based rental assistance (PRA). HUD requires that 10 percent of total funds be made available for each of these four program types.

S+C funds are awarded in a nationwide competition, with priority given to homeless needs. States, units of local government, Indian tribes, and Public Housing Authorities can apply for Shelter Plus Care (S+C) grants. Support services must match rental assistance and must be supplied by federal, state, or local governments; or private sources.

Non-PHA applicants applying for the SRO component must subcontract with a PHA to administer the rental housing assistance. Applicants for the SRA must subcontract with a nonprofit organization, also called a sponsor, to provide rental assistance to sponsor-owned or

leased units. PRA applicants must subcontract with a building owner to provide rental assistance for units in a particular property.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### Supportive Housing Program

This program was created by the Housing and Community Development Act of 1992. It replaces the Supportive Housing Demonstration Program (Transitional Housing Demonstration Program and Permanent Housing for Handicapped Homeless Program) and Supplemental Assistance for Facilities to Assist the Homeless (SAFAH). It incorporates many features of these programs into one program of assistance to governmental entities and private nonprofit organizations to provide housing and supportive services to homeless people. In FY 1993, \$100 million will be available for the program. The Supportive Housing Program provides funding under four main components:

Transitional housing to facilitate the movement of homeless individuals and families to permanent housing.

Permanent housing that provides long-term housing for homeless people with disabilities (including AIDS and related diseases).

Housing that is part of a particularly innovative project for meeting the immediate and long-term needs of homeless individuals and families.

Supportive services for homeless individuals and families not provided in conjunction with supportive housing facilities.

The SHP covers acquisition, rehabilitation, new construction, leasing of structures, operating costs, supportive services, and administrative costs. Grants for operating costs are up to 75 percent for the first two years, and 50 percent for the next three years. Funds for acquisition, rehabilitation, and new construction must be equally matched by cash from other sources. Grants are available to states, local governments, other government entities, Indian tribes and housing authorities, private nonprofit organizations, and community mental health associations that are public nonprofit organizations.

Transitional Housing for the Homeless, Supplemental Assistance for Facilities to Assist the Homeless (SAFAH), and Permanent Housing for Disabled Homeless Persons were incorporated into the Supportive Housing Program.

*Contact person: Nicole Kelso, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

## **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

### **Safe Havens Demonstration Program**

Safe Havens grants are to provide very low-income housing for homeless people with serious mental illnesses. Funds may be used for new construction, acquisitions, rehabilitation, leasing assistance, low-demand support services, outreach activities for eligible persons, and operating costs. Governments and private and public organizations may apply for funding. Total assistance may not exceed \$400,000 in five years, and all funds must be matched. This program is not yet in place.

## **PRIORITY #2**

### **MODERATE INCOME SMALL AND NON-ELDERLY RENTER HOUSEHOLDS**

#### **i. ANALYSIS OF RANK #2**

The State of Montana feels that the value of local need takes precedent, in planning, over a "top-down" management approach. It has been encombant upon local jurisdictions to demonstrate the degree of local need during applications for funds during competitive processes. Unfortunately, Housing and Urban Development regulations seem to indicate that by allowing local preference in planning (i.e.; allowing for the prospect that all housing activities can be ranked with a #1 priority rating) Montana's planning process would be unacceptable. Under these circumstances, bidding for competitive projects in interstate competition would penalize Montana's applicants. Therefore, since HUD approves, or disapproves, of Montana's CHAS process results, HUD thereby nullifies local need in lieu of statewide categorization. All

Priority #2 classifications do not reflect State needs, but are assessed so that the CHAS document is in compliance with federal guidelines.

## **ii. STRATEGY DEVELOPMENT -- INVESTMENT PLAN**

### **HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The purpose of the program is to expand the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdiction, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include

- Tenant-based rental assistance;
- Assistance to first-time home buyers;
- Property acquisition;
- New construction (justification required for neighborhood revitalization, special needs);
- Reconstruction, relocation, or demolition;
- Moderate or substantial rehabilitation;
- Site improvements;
- Conversions;
- Tenant based rental assistance; and,
- Other activities related to development of non-luxury housing (with approval of HUD).

All States, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting

projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income facilities to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;

- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

### **Low Income Energy Assistance Program (LIEAP)**

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### **Multifamily Rental Housing Program for Non-Profits (initiated February 1993)**

The Rental Housing Program provides mortgage funds for affordable rental housing for low-income Montanans. It is intended to use capacity and knowledge of local governmental units and non-profits to develop affordable housing to meet local needs. Funds are to be used to provide construction and permanent financing for projects meeting the terms and conditions detailed below. Proposals will be accepted from governmental units and non-profits based on a Request for Proposal distributed by the BOH. Due to tax law restrictions, applicants for the pilot project are limited to governmental units or nonprofit subsidiaries of governmental units. Approximately \$50,000 of the \$2.5 million available can be lent to other nonprofit groups such as HRDCs, Neighborhood Housing Services, and other private, nonprofit special needs corporations. The eligible applicant must be the owner of the project, must oversee the construction, and must be the property manager for projects financed under this program. The eligible applicant may contract with private industry for various segments of the project.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **Multifamily Bond Program (initiated 1978)**

From 1978 to 1982, the Board of Housing issued tax exempt bonds to finance the construction or rehabilitation of low-income multifamily housing. During that period, the board financed 668 multifamily units for low-income families and the elderly. During federal fiscal year 1993, the board made preliminary commitments of loan funds through the Multifamily Pilot Program for Rental Housing to non-profit and governmental sponsors of seven projects. These projects total \$2,023,253 in loan funds, \$4,723,005 in projected costs, and will provide 79 units of affordable rental housing. All of the projects are anticipated to be constructed in 1994.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

**PRIORITY #2  
VERY LOW INCOME FIRST TIME HOME BUYERS**

**i. ANALYSIS OF PRIORITY #2**

The State of Montana feels that the value of local need takes precedent, in planning, over a "top-down" management approach. It has been encombant upon local jurisdictions to demonstrate the degree of local need during applications for funds during competitive processes. Unfortunately, Housing and Urban Development regulations seem to indicate that by allowing local preference in planning (i.e.; allowing for the prospect that all housing activities can be ranked with a #1 priority rating) Montana's planning process would be unacceptable. Under these circumstances, bidding for competitive projects in interstate competition would penalize Montana's applicants. Therefore, since HUD approves, or disapproves, of Montana's CHAS process results, HUD thereby nullifies local need in lieu of statewide categorization. All Priority #2 classifications do not reflect State needs, but are assessed so that the CHAS document is in compliance with federal guidelines.

**ii. STRATEGY DEVELOPMENT -- INVESTMENT PLAN**

**HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The purpose of the program is to expand the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdiction, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include

- Tenant-based rental assistance;
- Assistance to first-time home buyers;
- Property acquisition;
- New construction (justification required for neighborhood revitalization, special needs);
- Reconstruction, relocation, or demolition;
- Moderate or substantial rehabilitation;
- Site improvements;
- Conversions;
- Tenant based rental assistance; and,
- Other activities related to development of non-luxury housing (with approval of HUD).

All States, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

## **MONTANA BOARD OF HOUSING PROGRAMS**

The Montana Board of Housing was created by the Montana Housing Act of 1975 in order to alleviate the high cost of housing for low-income persons and families. The funds to operate the programs administered under the act are generated through either the sale of tax-exempt bonds or from administrative fees. The board's programs fall into two categories: home ownership and multifamily programs. Each are described below.

*Contact person (all Montana Board of Housing programs): Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **HOME OWNERSHIP PROGRAMS**

#### **Single Family Bond Program (initiated in 1977)**

The Board of Housing works with approximately 80 lenders statewide to provide mortgages 1.5 percent below conventional rates to assist primarily first-time home owners. In certain target areas, the borrowers need not be first-time purchasers. The program has assisted over 18,000 Montanans to date, at a rate of 1,000 to 1,500 purchases per year. Average household income for the program is \$27,290, with a maximum family income limitation established by the BOH. Since 1975, \$734 million in bond proceeds have been loaned to home buyers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

#### **Mortgage Credit Certificate Program (initiated in 1987)**

This program enables moderate and low-income individuals to convert 20 percent of their annual mortgage interest expense from an itemization (income deduction) to a federal tax credit (tax payment reduction). Average household income of those served under this program was \$28,466. A total of 2,476 individual and family households have been assisted through this program since inception. While the program is mainly to assist first-time home owners, in certain target areas, the borrowers need not be first-time purchasers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of

the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

#### **Home Buyers Cash Assistance Program (initiated in May 1991)**

This program provides cash assistance to close a loan for home buyers having an income of no more than \$23,000. Funds may be used for up to 50 percent of the minimum cash required to close a loan (maximum advance of \$1,000), and these funds are combined with 6¾ percent, 30-year mortgage money. Purchase price of the home may not exceed \$50,000. Since its inception, the program has provided permanent financing of \$4,917,213 for 138 homes. In addition to permanent financing, the program provided \$119,778 in cash assistance with closing costs. Average household income for this program was \$17,209.

#### **203(k) Rehabilitation Home Mortgage Program (initiated in March 1992)**

The Board of Housing set aside \$5 million to provide a firm secondary market for the acquisition and rehabilitation of an existing dwelling not meeting minimum FHA standards. The home is to be owner-occupied with limited business use of the property. The purchaser is to be a first-time homebuyer except for certain targeted areas. This program is conducted in conjunction with the Department of Housing and Urban Development. The maximum loan amount is \$60,000 and family income may not exceed \$30,000. The refinancing of an existing home loan is not permitted. The board has purchased two loans for \$100,750.

#### **Montana Manufactured Housing Program (initiated in September 1992)**

The Board of Housing set aside \$4.5 million to finance single family manufactured housing installed on a permanent foundation on titled (owned) property. Lot cost, well, and septic can be included in the loan. These are 30-year loans with a 7¾ percent fixed rate of interest for first-time homebuyers or single parents (a separated or divorced person that was co-owner of a house) with annual household income at or below \$25,000. The home is to be owner-occupied with not investor involvement. The lot cannot exceed five acres. The maximum mortgage amount is \$65,000.

#### **Low-income Housing Preservation and Resident Homeownership Program (Title VI)**

The Low-income Housing Preservation and Homeownership Program was authorized in Title VI of the National Affordable Housing Act of 1990. The program provides competitive grants to assure the continuation of Section 221(d)(3) and Section 236 projects, whose low-income use restrictions could otherwise expire after 20 years of the final mortgage endorsement. The grants are financial incentives to retain project-subsidized housing projects, and to encourage sales to purchasers who will keep the property for low-income persons. Resident corporations, owners of low-income housing, nonprofit organization, state or local agencies, or any entity that agrees to maintain low-income affordability restrictions may apply for funding.

*Contact person: Richard Fox, Office of Housing, HUD-Denver Regional Office (303) 844-5351.*

## **HOPE 1 (Public Housing Homeownership) Program**

The HOPE 1 Program is to assist in providing affordable homeownership for residents of public and Indian housing. HOPE 1 funds are available in three forms: planning grants and implementation grants. Eligible activities for planning grants include:

- replacement housing;
- development of resident councils;
- counseling;
- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

The maximum planning grant amount is \$200,000, and it does not require matching funds. Mini planning grants are available.

With implementation grants, a grantee can fund

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities; and
- administrative and operating costs.

Implementation grants support the cost of developing the housing. There is no cap on overall grant amounts, but some eligible activities are capped. This type of grant requires non-federal matching funds. Both grant types are awarded on a competitive basis.

Resident management corporations, resident corporations, cooperative associations, public or nonprofit organizations, public bodies or agencies, Public Housing Authorities, and Indian Housing Authorities are eligible to apply for HOPE 1 grants.

*Contact person: HUD-Denver, Office of Public Housing (303) 844-4762.*

## **HOPE 2 (Homeownership of Multifamily Units) Program (Title IV)**

The HOPE 2 program was authorized in subtitle B of Title IV of the National Affordable Housing Act of 1990. Program funds are to be used to assist in developing homeownership opportunities for low-income persons by providing planning and implementation grants to organizations that will help families purchase and maintain units in multifamily projects. The projects must be owned by the government, FHA-distressed, or subject to mortgages that are insured or held by HUD. Resident councils, resident management corporations, cooperative associations, mutual housing associations, public or private nonprofit organizations, public housing agencies and Indian housing authorities are eligible to apply. Joint applications may be submitted. Grants are awarded competitively. Planning grants can be no more than \$200,000, while mini planning grants may be only \$100,000. They can be used for:

- development of resident councils;
- counseling;

- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

Implementation grants must be matched with non-federal funds that are at least 33 percent of the grant amount. The maximum implementation grant is based on the present published Section 8 Existing Fair Market Rents over a 10-year period. These grants can fund:

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities;
- administrative and operating costs; and
- acquisition.

*Contact person: Lois Tressler, Office of Housing, HUD-Denver Regional Office (303) 844-4959.*

### **HOPE 3 (Homeownership of Single Family Homes) Program**

HOPE 3 provides financial assistance for homeownership. Planning grants may be used for feasibility studies, technical assistance for grant recipients, researching the availability of properties, preparing applications for implementation grants, and program planning. HOPE 3 implementation grants may be used for the following:

- acquiring and rehabilitating property;
- assisting first-time home buyers in purchasing units;
- economic development to promote self-sufficiency of home buyers;
- administrative costs;
- replacement reserves; and
- home buyer outreach selection and counseling.

Eligible sources for housing are single family residential properties currently owned or held by HUD/FHA, VA, RTC, FDIC, DoD, GSA, DoT, FmHA, all other federal agencies, and state or local governments (including their agencies).

HOPE 3 eligible applicants include private nonprofit organizations, public agencies, cities, states, counties, and PHAs or IHAs in cooperation with a private nonprofit or cooperative association. Grants are awarded competitively: planning grants within a national pool, implementation grants in a regional pool. Planning grants cannot exceed \$100,000; implementation grants must be under \$3 million.

*Contact person: David Jacobs, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **Energy Programs**

Energy program funds are available from the Department of Energy and other agencies. Allocations can be used for rehabilitation and new construction.

## Weatherization

Energy costs are one of the greatest demands on a low-income family's resources. During Montana's winter, these costs can exceed rental or mortgage costs. The weatherization program administered by the Montana Family Assistance Bureau is 100 percent funded by the Department of Energy and Department of Health and Human Services. The program is designed to help low-income persons reduce their home heating costs and to conserve natural resources. The funds are directed toward local Human Resource Development Councils (HRDCs) and tribal organizations. These organizations decide where the grant money will be spent to install energy saving measures in the homes of low-income persons. Homes are prioritized based on energy consumption.

Specific measures are decided upon after each home has had an energy audit to determine which activities would be most cost-effective. Measures include insulation, caulking, furnace repair and replacement. All labor and materials are purchased locally. By reducing overall costs, weatherization helps a family stay in their home, increasing family self-sufficiency. Income not spent on utility bills stays in the local economy, as does money spent on labor and materials.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### Low Income Energy Assistance Program (LIEAP)

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

\* Or, based upon HUD adjusted income limits, if applicable.

The State of Montana feels that the value of local need takes precedence, in planning, over a "top down" management approach. It has been encumbant upon local jurisdictions to demonstrate the degree of local need during applications for funds during competitive processes. Unfortunately, Housing and Urban Development regulations seem to indicate that by allowing local preference in planning (i.e., allowing for the prospect that all housing activities can be ranked with a #1 priority rating) Montana's planning process would be unacceptable. Under these circumstances, bidding for competitive projects in interstate competition would penalize Montana's applicants. Therefore, since HUD approves, or disapproves, of Montana's CHAS process results, HUD thereby nullifies local need in lieu of statewide categorization. All priority #2 classifications do not reflect state needs, but are assessed so that the CHAS document is in compliance with federal guidelines.

## C. PUBLIC POLICIES, COURT ORDERS, HUD SANCTIONS

### PUBLIC POLICIES

MDOC will continue to provide technical assistance to local government and other entities for the purpose of evaluating and qualifying for housing programs under its control and influence. Half of one staff person's time will be committed to intergovernmental cooperation and application workshops. The application guidelines will be designed to promote cooperation between various local entities, in order to overcome the sometimes fragmented areas of responsibility in housing programs.

The role of the State will expand in regard to the provision and interpretation of information that aids localities in determining and quantifying their housing needs, problems, and alternative solutions to those problems. The State also intends to continue supporting the grant and loan applications of other entities which expand the supply of housing and other related services.

Another creative approach to promoting affordable housing has surfaced. Many small localities are unable to raise enough funds to qualify for federal matching fund programs. The Montana Board of Investments (BOI) and MDOC intend to explore ways in which BOI can provide low interest loans to less advantaged communities for the purpose of providing revenues for federal matching fund programs.

The Community Development Bureau of MDOC received a grant to research model zoning standards. It is widely believed that local and some statewide land-use policies are making the provision of affordable housing more difficult than would otherwise be the case. By studying and inspecting alternatives to current Montana policies, the Community Development Bureau hopes to both encourage a broader dialogue regarding more equitable zoning practices and advise local entities on alternatives to these rules and regulations, thereby facilitating the provision of affordable housing.

The State will continue promoting and assisting non-profit organizations and other entities in applying for and receiving certification as Community Housing Development Organizations (CHDOs). This type of organization has the advantage of a 15 percent set-aside of HOME Program funds for qualifying CHDOs.

MDOC recognizes that one of the best ways of facilitating development of housing is through education and technical assistance. Many people perceive that the array of housing programs and regulations is too complex, or too foreign, to master. For example, FmHA housing rehabilitation money is seldom used because some people believe that the application process is restrictively cumbersome. MDOC is determined to expand its role as a provider of technical assistance, helping local jurisdictions to quantify their housing needs, qualify for various housing programs, and better understanding the requirements of various housing programs. Assistance can be particularly helpful in exploring and determining with some precision the degree and type of local needs.

MDOC, through its Housing Assistance Bureau, will also develop a housing program information clearinghouse. The bureau will construct a database of all housing programs relevant to Montana, whether administered by MDOC or other entities in the State. Other programs related to expanding housing opportunities will also be researched and included.

#### **COURT ORDERS AND HUD SANCTIONS**

The State of Montana has no court orders or HUD sanctions pending at this time.

#### **D. INSTITUTIONAL STRUCTURE AND INTERGOVERNMENTAL COOPERATION** **INSTITUTIONAL STRUCTURE**

Nearly all State-administered housing assistance programs are handled by the Department of Commerce (MDOC), primarily within the Board of Housing, the Community Development Bureau, and the Housing Assistance Bureau. Only recently, the MDOC was authorized to begin development of more formal and long-term development of programs and program delivery systems. As lead agency, the Housing Assistance Bureau will continue to develop the CHAS, to manage and coordinate its many related housing programs, and to promote the interaction and coordination of the many agencies and entities involved in providing affordable housing. To do this successfully, the MDOC established the Housing Assistance Bureau as the lead agency to carry the responsibility for development of future CHAS planning and the management and coordination of many housing programs. During FFY 1993, the Housing Assistance Bureau will also complete its authorization to develop, implement, and manage the HOME Program and CHAS processes.

Another avenue the State wishes to explore in greater detail is coordination with the private sector. Many banks, savings and loans, and other financial organization involved in housing are interested in taking advantage of federally assisted housing improvement programs in meeting requirements of the Federal Community Reinvestment Act (CRA). One federally assisted program is the Montana Community Development Block Grant (CDBG) Program, where local governments apply for grant funds in annual competition to fund housing projects involving the rehabilitation of homes owned or rented by low- or moderate-income families, along with activities to improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds can play a key role in leveraging. Following a plan such as this helps to create a pool of funds for rehabilitation loans at below market interest rates.

MDOC will continue communicating and coordinating activities with other agencies throughout the year. These actions assist in identification of areas for which further communication and cooperation may be needed and can help to identify gaps in the institutional provision of services. This has included application workshops for CDBG funding, information dissemination regarding the Community Reinvestment Act, advice to non-profit entities on how to become certified as a Community Housing Development Organizations (CHDO), and support for other entities in their application processes for funding of various programs.

The Housing Assistance Bureau will begin to explore methods that both state and local government can implement in support of affordable housing. For example, one idea to consider is the extent to which legal ability resides with the local government in the transfer of tax deed properties to non-profit entities for the purpose of promoting affordable housing. Other questions may include the degree of stimulation in property tax revenues generated, and other pay back issues.

During processes that developed the FY 1993 CHAS, Human Resource Development Councils and the Montana Building Industry Association both indicated a pressing need for increasing the limits for both FHA and VA loans. It is the State's understanding that the Montana Building Industry Association is willing to financially support such activity. The homebuilders believe that by increasing the ability of middle income Montanans to move-up to more expensive homes, existing structures will become available to low-income Montanans. While the Housing Assistance Bureau would need legislative authority to commit resources to this effort, the bureau supports this activity.

MDOC recognizes that housing policy and housing program responsibilities are often fragmented across a variety of agencies and organizational entities throughout both the State and federal government. To aid in resolving these complications, MDOC supports the formation of a larger "team" comprised of other government and citizen participants, to aid in directing and solving housing problems facing the State. While MDOC will not prescribe content or scope of the team, or steering committee, MDOC feels that creation of this type of intergovernmental advisory committee will greatly facilitate statewide coordination and delivery of housing programs. MDOC will solicit support for the formation of such an entity for the State's housing policy formation and the development of broader-based constituencies researching and analyzing housing problems facing the State.

The State has been unable to identify the exact size and specific needs of the non-homeless persons with special needs. Since the Housing Assistance Bureau lacks this data, it is difficult for them to propose actions for that in-need population. MDOC will be looking to the steering committee for input in the development and specification of goals in serving this in-need population. Furthermore, MDOC supports the prospective participation of individuals representing the interests of the developmentally disabled, correctional institutions, and other advocates representing non-homeless with special needs populations.

The bureau, organized under the Local Government Assistance Division of MDOC, was authorized to develop, implement, and manage the HOME Program. The position of program manager was advertized, and the manager was selected. Several other positions were created; these are two HOME program officers, one CHAS coordinator and one program assistant. The hiring process has been completed for the two program officer and CHAS coordinator positions.

HOME staff developed the program guidelines and held nine public hearings on the guidelines in various Montana communities. It is felt that with these additions to staff, and the design of the program, MDOC has initiated a very detailed and specific plan for the coordination

and delivery of program services throughout the State. By coordinating the consolidation of the CHAS process in one bureau, smooth and consistent agency processes are being laid down. The bureau is now in a much better position to provide guidance and cooperate with other state and local parties and agencies.

The Community Reinvestment Act (CRA) has stimulated the involvement of for-profit organizations in the provision of affordable housing. One example of CRA's work is the Community Home Ownership Program of Norwest Bank. Ten million dollars has been allocated by Norwest Banks in Montana and Wyoming to be used for home mortgage loans. The loans are available to people in Norwest Bank-designated market areas in Montana for purchasing single-family, owner-occupied residential units. The bank's program provides a low down payment, no discount points, low loan origination fees, and competitive interest rates on home mortgage loans. The loans are available only to families earning no more than 115 percent of the HUD-determined median income for the area, or \$30,000. These benefits help make home ownership possible for some low- and moderate-income Montanans.

#### **INTERAGENCY COOPERATION AND COORDINATION**

The development and initiation of the HOME Program was not the sole component of the CHAS development process. MDOC has other institutional concerns, such as the integration and coordination of its programs with other possible solutions to affordable housing.

For example, many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the Federal Community Reinvestment Act (CRA). One of the federally assisted programs is the Montana CDBG Program, where local governments can apply for grant funds in annual competition to fund housing projects. Projects may involve rehabilitation of homes owned or rented by low- or moderate-income families, as well as activities that improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds play a key role in leveraging. This creates a pool of funds for rehabilitation loans at below market interest rates.

MDOC also has been communicating and coordinating activities with other agencies throughout the entire year. This assists in the identification of areas for which further communication and cooperation may be needed and helps to identify gaps in the institutional provision of services. Activities included application workshops for CDBG funding, information dissemination regarding the Community Reinvestment Act, advice to non-profit agencies and prospective non-profit entities on how to become certified as a Community Housing Development Organization (CHDO), and support for other entities in their application processes for the funding of various programs.<sup>41</sup>

---

<sup>41</sup>For example, the Community Development Bureau assisted the City of Kalispell in forming an alliance with the Federal Home Loan Bank of Seattle. The bureau's role was to emphasize the widespread strength that the program had throughout the state and MDOC.

## **E. LOW INCOME HOUSING TAX CREDIT (LIHTC)**

The Low Income Housing Tax Credit (LIHTC) is available under Section 42 of the Internal Revenue Code of 1986. The credit is a federal income tax credit for owners of qualifying rental housing which meets certain low-income occupancy and rent limitation requirements.

Except for certain buildings substantially financed with tax-exempt bonds, an owner must first obtain a credit allocation from the appropriate State agency before claiming the tax credit. The amount of tax credit which may be allocated annually for housing within each state is limited to \$1.25 per State resident. The Montana Board of Housing allocates the tax credit for housing located in the State.

The tax credit is available for residential rental buildings which are part of a qualifying low-income project. The rental units must be available to the general public. Residential properties which were ineligible for the credit generally include transient housing (housing initially leased for less than six months), building of four units or less which are occupied by the owner or a relative of the owner, nursing homes, life care facilities, retirements homes providing significant service other than housing, dormitories, and trailer parks.

The tax credit is used in conjunction with the acquisition and substantial rehabilitation or construction of qualifying residential rental housing. Gross rent for each low-income unit cannot exceed 30 percent of the applicable income ceiling. Gross rent includes the rent paid by the tenant, including utility costs, but excludes Section 8 or other federal rent subsidies. If the tenant pays utilities directly, the minimum rent is reduced by a utility allowance.

The LIHTC Program facilitates the provision of affordable housing to the residents of Montana. Project selection criteria include serving low-income tenants, projects located in distressed or hard-to-develop areas, projects that meet the area's housing needs and priorities, projects serving tenant populations with special housing needs, and projects corresponding to areas with long assisted-housing waiting lists.

## **F. PUBLIC HOUSING RESIDENT INITIATIVES**

The State of Montana has no public housing directly under its control. Therefore, it has no Public Housing Resident Initiatives, or management discussion to offer. However, the State feels that conversion of public housing to owner-occupied housing is desirable, as long as the number of public housing units expands accordingly.

## **G. LEAD-BASED PAINT PROGRAM BEING FORMED**

Montana programs related to control of lead-based paint hazards are in their infancy at the present time. The Montana Department of Health and Environmental Sciences (MDHES) has requested funds in the amount of \$340,928 from the Department of Health and Human

Services Centers for Disease Control under the State and Community-Based Childhood Lead Poisoning Prevention Program. Funding for the program's first year has been secured. Funding for subsequent years is contingent upon the initial success of the program. The funds will be used for the Montana Childhood Lead Poisoning Prevention Program. This program will be initiated by the Butte-Silver Bow Health Department, under contract to MDHES.

The Montana Childhood Lead Poisoning Prevention Program will entail the creation of local programs within the communities thought to have the highest at-risk population: Great Falls and Missoula. The program would eventually incorporate other major cities not served and access for rural areas through the urban program. Activities for the first year include the launching of a statewide education and outreach effort, organizing the program in these two cities, and demonstrating a rural outreach model, accessing areas of southwestern Montana through the existing program in Butte. The first six months would be spent in selecting and training community staffs and launching the education program in each area. Screening, environmental assessments, and environmental and medical management would begin after the first six months.

Long-term funding for the program could be provided through a fee system for both screening and environmental assessment. The fees would begin in the second year of the program as the Butte program has shown fees to deter parents from having their children tested unless a definite need has been established. Other potential sources for funding are private and public community resources.

In addition to the Childhood Lead Poisoning Prevention Program, the Occupational and Radiological Health Bureau in the State Department of Health is in the early stages of creating a program to certify training courses for workers, supervisors, and inspectors of lead-based paint evaluation sites. They are currently studying the programs in place in other states and developing a funding proposal. By spring 1994, the EPA intends to have a set of regulations to guide the certification process for training courses.

## **HIGH RISK AREAS**

The Butte Lead Program staff developed a process in order to identify areas of high risk for lead poisoning of children. Seven Montana cities were ranked according to these indicators:

- Percentage of children in the age group 0-5 assigned poverty status;<sup>42</sup>
- Total number of children in age group 0-6;
- Poverty rate; and
- Percentage of homes built prior to 1960.

---

<sup>42</sup> While the target age group is 0 to 6, data related to poverty status by age group is presented in five-year increments.

A score of 1 indicated the highest risk, 7 the lowest. Great Falls and Missoula, the cities with the lowest scores, were identified as high risk areas. Butte also demonstrated a high risk but has a program already in place. Table 2.28 (below) presents the scores of each city.

Pre-1940 housing units, those most likely to contain lead-based paint, make up 17.1 percent of the total housing units in Montana. Of those units built before 1940, 25.4 percent are occupied by very low-income renters. Older rental units have higher rates of lead poisoning than do pre-1940 owner-occupied units. Of all renter households, about 58,010 are estimated to have lead-based paint. For owner-occupied households, 92,189 are estimated to have lead-based paint. This is not an indication of the number of households with a lead-based paint hazard; it is merely those most at risk. The findings of initial Superfund-related study by the Butte-Silver Bow Health Department, when applied to the State, indicate that approximately 8,500 children may currently be at risk of lead poisoning.

**TABLE 2.28**  
**DATA FOR IDENTIFYING HIGH RISK AREAS**

COMMUNITY	% CHILDREN 0-5 BELOW POVERTY	RANK	CHILDREN 0-6	RANK	POVERTY RATE	RANK	% HOUSES BUILT PRE-1960	RANK	TOTAL RANK
Billings	15.5%	6	8,459	1	12.7%	6	39%	6	19
Bozeman	23.3%	1	1,814	6	20.6%	1	42%	5	13
Butte	19.1%	4	3,227	4	15.0%	3	66%	1	12
Great Falls	20.4%	3	5,856	2	13.9%	4	52%	2	11
Helena	17.5%	5	2,374	5	11.0%	8	52%	3	20
Kalispell	14.2%	7	1,141	7	13.8%	5	17%	7	26
Missoula	23.2%	2	3,994	3	17.5%	2	50%	4	11

## OTHER CURRENT PROGRAMS

East Helena has a lead program which is relatively small, screening approximately 50 children annually in the East Helena area only. The program is funded by ASARCO and is part of the Lewis and Clark County Health Department.<sup>43</sup> Statistics relating to the East Helena Lead Program's blood screening activities are presented in Table 2.29 (below).

**TABLE 2.29**  
**LEWIS AND CLARK COUNTY**  
**OCTOBER 1991 THROUGH NOVEMBER 1992**

Results of Children Screened	11	7	6	-	-
Results of Children Monitored <sup>44</sup>	1	5	7	2	-

The Butte Childhood Lead Poisoning Prevention Program, mentioned above, is a comprehensive program funded by the Atlantic Richfield Corporation (ARCO). The Butte

<sup>43</sup> The East Helena Lead Program began in conjunction with an overall environmental investigation associated with area smelting activities.

<sup>44</sup> Monitoring is to evaluate status of previously established elevated levels

program began as a result of Superfund-related activities and is part of the Butte-Silver Bow County Health Department. The \$116,000 supplied annually by ARCO is used to support two full-time staff positions as well as screening activities, lab support, and environmental investigations. The Butte program has screened approximately 1,000 children in its first two years of operation. Under contract to MDHES, the Butte Lead Program coordinator and clinical technician have begun two days of preliminary statewide screening in each of 12 counties. The data from that sampling are presented in Table 2.30, below.

**TABLE 2.30**  
**BLOOD LEAD LEVELS IN CHILDREN**  
**OCTOBER 21, 1992**  
(in  $\mu\text{g/dL}$ )

Yellowstone County	19	20	1	0	0
<b>TOTAL</b>	<b>200</b>	<b>168</b>	<b>67</b>	<b>15</b>	<b>2</b>

The Butte program includes a Lead Levels Advisory Committee with representatives from county government, the private non-profit sector, the local university, physicians, and citizens. The model set up with this committee is intended to be used for the statewide program.

The community program began as a result of concerns about lead contaminants in the soil from mining and smelting activities in southwestern Montana. Initial findings of attempts to study the mining-lead contaminants issue in the Butte area have suggested that lead-based paint poses a far greater threat. Therefore, Butte's local program on lead poisoning prevention now focuses on housing-related lead hazards.

## H. MONITORING STANDARDS AND PROCEDURES

Grantee and awardee recipients under Montana's housing assistance programs are responsible for administering the projects in accordance with all applicable Federal and State statutory and regulatory requirements. The Department of Commerce has the responsibility to ensure that grantees are carrying out their projects in accordance with these requirements.

Several key federal requirements pertaining to project monitoring and progress report include:

---

<sup>45</sup> Blood lead levels were averaged for clients having multiple venipuncture specimens.

Section 104(d) of the Federal Housing and Community Development Act and 24 CFR 570.498. The Act and HUD regulations require the submittal of a performance and evaluation report to HUD before October 1, annually, by MDOC. Among other issues, the report must describe the status of all those projects funded through the Montana Community Development Block Grant Program which have not been administratively closed out, include the extent to which each project has benefitted low and moderate income persons.

Section 104(e) of the federal Housing and Community Development Act. The Act requires MDOC to monitor each of the recipients to ensure that the recipient:

- has conducted activities in a timely manner;
- has complied with the provision of the federal Housing and Community Development Act and all other application laws;
- has the continuing capacity to carry out its activities in a timely manner.

24 CFR 570.497. HUD regulations require MDOC to establish record keeping requirements sufficient to demonstrate that Montana's CDBG recipients are administering their projects in compliance with the provisions of the federal Housing and Community Development Act and all other applicable laws.

Office of Management and Budget Circular A-102, Attachment I..OMB requires MDOC to constantly monitor its recipients "to assure that time schedules are being met, projected work units by time periods are being accomplished, and other performance goals are being achieved."

The purpose of monitoring is the Department's primary method for determining whether a project is in compliance with state and federal requirements. It is the Department's goal to assist and support grantees in complying with applicable state and federal requirements and in successfully implementing their project activities from start-up through closeout of the project. During the course of the local project, the Department will monitor each grantee through written progress reports and periodic on-site visits, so that any problems which might occur can be resolved as soon and as easily as possible.

The federal Housing and Community Development Act, the Cranston-Gonzales Housing Affordability Act, and/or HUD guidelines require the Department to determine whether its recipients:

- are complying with the requirements of the program and other laws and regulations;
- are carrying out their project activities as described in their applications and contracts;
- are carrying out their project activities in a timely manner, in accordance with adopted project implementation schedules;
- are charging costs to the projects which are eligible uses of funds and consistent with the approved project budget; and,
- are conducting the program in a manner which minimizes the opportunity for fraud, waste, and mismanagement.

Grantees are required to maintain complete financial and project files, to comply with CDBG reporting requirements, and to make their records available to authorized agents of the State or Federal government. Representatives of the Department must be provided reasonable access, during normal business hours, to all books, accounts, records, reports, and files pertaining to funded activities. Grantees must also provide all citizens with reasonable access to records regarding the use of the funds.

In addition to reviewing the project progress reports submitted with requests for funds, the MDOC liaison will schedule at least one on-site monitoring visit for each grantee. Most projects are monitored twice; one, after start-up and second, during actual implementation or construction activities. Each monitoring visit usually involves a two day visit to the community to review records, to inspect the community's progress in completing the project activities, and to meet with the project manager and local officials. On-site monitoring is a structured review conducted by the MDOC program officer at the location(s) where project activities are being carried out and/or where project records are maintained. MDOC staff use a formal monitoring guide with checklists covering the key requirements discussed herein as the format for their review of local projects.

Prior to a monitoring visit, the MDOC liaison will contact the project manager concerning the timing and scope of the monitoring visit. Each monitoring visit normally includes an entrance and exit conference. If it is inconvenient for local officials to schedule an entrance conference, the MDOC liaison will ensure that, at a minimum, an exit conference takes place. The entrance conference is designed to outline the scope of the monitoring visit. The exit conference provides an opportunity to meet with local officials and staff to review and discuss any outstanding issues identified during the first visit, both positive and negative. As part of that review, the MDOC liaison will describe his or her tentative conclusions and indicate the level of concern that will be assigned to a particular issue and why. In particular, the MDOC liaison will discuss those issues that he or she intends to address in written monitoring comments. In many cases, by thoroughly discussing a potential problem, MDOC staff are able to determine that there is a reasonable explanation for a particular circumstance or question. Since the overall goal of the MDOC liaison is to assist grantees in achieving timely and effective grant management, every effort will be made to informally resolve or clarify minor monitoring concerns during the exit conference.

Within 30 days following the monitoring visit, the MDOC liaison will provide written monitoring comments to the grant recipient. Copies of the letter will be sent to both the chief elected official and the project manager. The Monitoring letter will contain the following general elements:

- a description of each major area the monitoring visit covered, files review, who conducted the review and the date that it occurred;
- a brief description of the statutory or regulatory requirement at issue and an explanation of the documentation examined pertinent to the requirement;
- the conclusion the reviewer has reached; i.e., satisfactory performance, a "concern", a "question of performance", or a "finding"; and,
- a statement which describes the basis for the conclusion.

Within the scope of a monitoring review there are potentially three levels that may be assigned to a particular issue, if the grant recipient's performance is considered less than satisfactory:

#### **CONCERN**

When MDOC liaison raises an issue that does not involve a statutory or regulatory requirement but may involve recommending a management or program improvement, it is considered a "concern". A modification of an administrative procedure or policy is suggested but is not required. No response by local officials is required.

**QUESTION OF PERFORMANCE**

If the monitoring review raises a question regarding whether a violation of a statutory or regulatory requirement has occurred, the MDOC liaison will first informally discuss the review results with local officials to determine if a violation has occurred. If a determination cannot be made during the exit conference, the MDOC staff may conclude that there is still a "question of performance" and request that additional information be provided within a 30 day time period in order for the Department to determine whether a violation has, in fact, occurred. A final determination regarding the issue under question will be made within 30 days of the grant recipient's response.

**FINDING**

When a monitoring review of a grant recipient's performance reveals a specific, identifiable violation of a statutory or regulatory requirement about which there is no question, the MDOC liaison will make a "finding". A written response regarding the grantee's proposed actions to correct the situation is required within 30 days of the date of the MDOC liaison's monitoring letter.

Three possible corrective actions are allowed:

- Prevent a continuance of the violation;
- Mitigate any adverse effects or consequences of the violation to the extent possible under the circumstances;
- and
- Prevent a recurrence of the same or similar violation.

There may be a number of acceptable solutions for resolving a violation. The grantee is allowed to respond to each problem with any reasonable and adequate solution of its choice. The adequacy of a corrective action will be determined by the MDOC. At all times, the MDOC staff will offer any necessary technical assistance to grantees to avoid or resolve any monitoring findings.

## SECTION III - ANNUAL PLAN

### SUMMARY OF MONTANA'S HOUSING DIFFICULTIES

Housing needs across the State of Montana vary widely. The extreme diversity in available housing, the age of the housing stock, and the overall range in population density complicate assessments of the degree of need. There is a broad array of housing availability, affordability, and suitability problems. The State believes that simply treating the symptoms of the malady will not be sufficient to solve the problems. Resources do not appear to be adequate to completely deal with the housing needs and requirements that plague the State.

The difficulties are becoming more structural for low-income households and families, and they have spread to nearly all income groups, except the wealthy. Regardless of the overwhelming demand for affordable housing, Montana will be implementing programs and delivering services to in-need populations around the State, attempting to initiate a process that will at least minimize the State's housing problems. The general purposes are to:

- Expand the supply of decent and affordable housing, particularly rental housing, for low- and very low-income Montanans. This includes making existing rental housing affordable through tenant-based rental assistance.
- Strengthen the abilities of state and local governments to design and implement strategies for achieving adequate supplies of decent, affordable housing for all Montanans.
- Provide both financial and technical assistance to local government and non-profit entities, including the development of model programs for affordable low-income housing.
- Extend and strengthen partnerships among all levels of government and the private sector, including for-profit and nonprofit organizations, in the production and operation of affordable housing.

With these broad-based goals in mind, Montana anticipates supporting any and all programs that address housing needs throughout the State.

### INSUFFICIENT HOUSING AVAILABILITY

Lack of available housing requires resolution; nothing is available for low- and moderate-income Montanans in most parts of the State. If it is available, it tends to be of substandard quality. Since the 1990 Census was taken, Montana's major cities have experienced a dramatic increase in population that is driving up the demand for housing; prices are following demand accordingly.

In cities such as Kalispell, Missoula, Bozeman, Helena, or Billings, in-migration is often comprised of higher income persons who are in a better position to purchase land and buildings than many current State residents. Of those Montanans who can afford housing, many must resign themselves to acquiring lower-quality shelter due to the encroaching housing shortage.

Low-income Montanans lose housing options. People fear becoming homeless because they can no longer afford housing in their area, whether rented or owned. The homes currently being constructed are the more expensive, up-scale homes. Little, if any, construction activity creates affordably priced homes and rental property. Within the next few years, Section 8 waiting lists administered by the State are expected to swell about 65 percent, to over 10,000 people.

### **ABSENCE OF HOUSING AFFORDABILITY**

Affordability varies widely around the State, but it is typically a severe problem in the more urbanized areas. Rural and sparsely populated regions of Montana tend to experience dual problems with housing shortages and quality. Because of the tight market and general lack of home building, prices for both homes and rental units have risen sharply in the last year.

There is a large gap between what the market is supplying and what people can afford. Some Section 8 landlords are increasing rents at annual review, citing prevailing markets, rates, taxes, and sewer increases. Other Section 8 landlords are simply leaving the program for the private rental market that provides wider profit margins, citing HUD limitations on rent increases and use of vouchers and certificates.

### **INADEQUATE HOUSING SUITABILITY**

A major problem pertains to the structural and physical integrity of the housing stock. Although many people live in their own homes, incomes are not high enough to maintain them. Several examples highlight this condition. Physical deficiencies are a major problem in many housing units across the State. A portion of the housing stock is 100 years old and built on sandstone foundations. Structures also tend to have old, inadequate electrical wiring and gas vented chimneys used for wood stoves. Most older homes are poorly insulated. Particularly troubling for the large stock of Montana's older homes is the prospective risk of lead-based paint hazard. Nearly two-thirds of the housing stock could be affected, although low-income rentals present the greatest risks.

In these areas, lack of return on investment is a major problem for landlords of housing units that need rehabilitation. Landlords do not want to lose their present tenants, but are also reluctant to borrow money and incur debt when they cannot afford to evict tenants or raise the rents to meet the debt service.

### **LACK OF HOUSING ACCESSIBILITY**

Under the Americans with Disabilities Act, housing accessibility has become a visible need across the State. Accessibility is a problem unless a unit is specifically built for people with disabilities. Modifications are often difficult and expensive, and must be complete, removed when the tenant leaves (according to the ADA). Most people with disabilities cannot afford to do this, and landlords do not want the inconvenience or cost of constant remodeling.

## SUMMARY

### MONTANA'S ANNUAL PLAN STRATEGY OBJECTIVES

While all housing difficulties fall into one (or more) of the four problem areas, the exact circumstances faced by Montana's communities are as diverse and widespread as the State's geography. A combination of population in-migration and an economy undergoing structural change has had a dire effect on Montana's housing situation. Since the 1990 census was taken, the cost of housing has risen dramatically; available, affordable housing for the very low-income, low-income, and moderate-income population has disappeared in many areas of the State. In other parts of the State, existing vacant housing needs maintenance, causing an overall decline in the suitability and quality of housing. No single prescriptive approach to solving Montana's housing problems is applicable on a statewide level. Montana's strategy is designed to address the four problem areas, but is comprised of many pieces. These are itemized below, and summarized immediately thereafter. The strategic actions are:

- Relieve the shortage of available housing stock;
- Increase the stock of rental units, especially assisted units;
- Promote capital formation to build an adequate number of affordable housing units;
- Increase the ability of low- and moderate-income households to buy homes;
- Increase resources to finance housing maintenance and improvements;
- Better define and explain housing assistance programs;
- Work to ensure fair housing compliance;
- Assist in securing adequate resources to meet the needs of persons requiring supportive and transitional services in achieving permanent housing;
- Assist in securing adequate resources to meet needs for supportive services for the homeless;
- Assist in securing additional funding and resources to increase capacity and counseling service for runaway youth;
- Increase accessibility of Montana's housing stock;
- Increase energy efficiency of Montana's low-income housing stock; and,
- Increase ability of MDOC to respond to requests for technical assistance.

### STRATEGIC ACTION DISCUSSION

#### RELIEVE SHORTAGE OF AVAILABLE HOUSING STOCK

There is a lack of housing in Montana. The problem is especially severe for the low- and moderate-income population. From the long-term poor to the newly poor, the elderly, disabled, families, and young singles all face a lack of affordable housing and shelter. The largest increase in need, however, appears to be for low- and moderate-income families. The number of homeless, newly poor families has risen greatly in the last year, while the State's available, affordable housing has decreased. This increase in demand has been met with little corresponding increase in housing stock anywhere in the State.

Vacancy rates statewide average from 3 percent in some of the rural areas to zero in the urban areas with long waiting lists. Because of the shortage of all types of housing, landlords can rent their units for much higher prices. The increase in demand caused by people moving into Montana from other states prices the low-income population out of even minimum standard

shelter. Deinstitutionalization of mentally disabled people, an increasing number of elderly people who can no longer maintain their own homes, and low-income people displaced by those who can afford to pay higher rents are contributing to the problem as well.

Surveyed statewide housing officials expressed the opinion that developers have no incentive to build the kinds of housing needed to ease the housing problem in Montana. There is little or no return on a builder's investment in low-income housing and a lack of zoning for multifamily dwellings. There is also a shortage of land subdivided and ready to build upon, and a severe lack of mobile home spaces. Weak statewide subdivision regulations allow the creation of subdivisions through "occasional sale" transactions. This frustrates comprehensive planning efforts, creating infrastructure problems for cities and counties.

#### **DESIRED ACTIONS**

New construction must be initiated. Montana needs multifamily dwellings and additional public housing. Rehabilitation programs to keep existing stock from deteriorating and maintenance programs to help the elderly remain in their homes will be promoted. State-funded housing programs should be expanded to help build housing and provide state matches for federal programs. MDOC intends to facilitate a cooperative effort among lenders, local housing authorities, and service organizations to develop cohesive packages to compete for housing program funds. Incentives to builders will be inspected. Programs such as the Low Income Housing Tax Credit Program and the Single Family and Multifamily Bond Programs will be further encouraged.

MDOC expects to release a set of model zoning and land-use policies that encourage affordable housing. Furthermore, local governments will be encouraged to review their land-use policies to determine whether they are exclusionary with respect to certain types of affordable housing.

#### **INCREASE STOCK OF RENTAL UNITS: ESPECIALLY ASSISTED UNITS**

Public Housing Authorities (PHA) in Montana have not been able to keep up with the demand for affordable rental housing for low-income persons. Waiting lists in the major cities are extremely long, especially for families. The State-administered Section 8 waiting list is anticipated to exceed 10,000 within the next few years. Furthermore, in the July 1992 regional competition for rental certificates and vouchers, no rental certificates or vouchers were allocated to PHAs in Montana. Every administrator of Section 8 subsidies in the State reports growing waiting lists for families.

Housing officials also noted that Section 8 vouchers are issued to the tenants themselves, independent of a particular unit. The potential exists for those holding vouchers to take them with them when they leave the community. Housing officials are not issuing new vouchers, resulting in a community less able to address low-rent housing needs. This problem is especially

difficult for rural areas where people are leaving in greater numbers to find employment in larger communities.

### DESIRED ACTIONS

More affordable multifamily rental housing must be created. MDOC will work to facilitate rental housing programs that are directed toward the development of new units and rehabilitation of existing unsuitable units.

The Section 8 voucher system does not guarantee that the assistance will stay within a community, since families take vouchers with them when they move. Periodic review of voucher distribution by HUD and the State of Montana would help determine if additional vouchers should be issued. If so, MDOC will advocate on behalf of the State.

### PROMOTE CAPITAL FORMATION TO BUILD AFFORDABLE HOUSING UNITS

There has been little new construction or rehabilitation of existing housing units in recent years. HUD noted in its June 1991 report entitled *A HUD Perspective of Montana* that a portion of this problem relates to capital scarcity:

"There is little new development of apartments in the State. Refinancing of existing projects is also slow because of low market value and constrictive underwriting requirements for available programs. Importation of capital into Montana via conventional sources is scarce. Local lenders shy away from lending on government projects because of their size and the lenders' lack of knowledge about HUD programs."

Further, the 1986 Federal Tax Reform Act eliminated a number of investment incentives including the provisions effecting capital gains exclusions, accelerated depreciation and passive income issues. For example, the investment tax credit for the rehabilitation of older buildings for income purposes including multifamily housing has been severely impacted. The Montana State Historic Preservation Office, which manages the program, notes that the number of projects has diminished sharply since 1986.

Often real estate development financing is derived through the use of limited partnerships. The investment incentives for limited partnerships were all but eliminated through provisions in the 1986 Act. This has resulted in the development of fewer multifamily units aimed at benefiting low-income Montanans. According to the Montana Building Industry Association, the loss of federal tax incentives associated with multifamily construction in 1986 is now resulting in a serious rental housing shortage in a number of Montana jurisdictions.

Some areas of the State cited higher "outside" costs as a contributing factor to the lack of development of multifamily units. These include infrastructure development, service hook-ups, and compliance with various local land use regulations. However, all agreed that the overriding issue has been the loss of important federal incentives which guarantee an adequate rate of return for the development of multifamily housing.

In many areas, especially those where there is a high demand for all types of rental housing (college communities, tourism communities, and communities which offer regional

medical and social services), housing officials noted that fair market rents under the Section 8 program were too low to be of interest to private developers.

Prospective lowering of HUD fair market rents (FMR) could make this situations worse. FMRs are often already below the non-subsidized rents charged in a community.

#### **DESIRED ACTIONS**

Since permanent acceptance of the Low Income Housing Tax Credit has passed, MDOC is in a better position to provide information to investors for the purposes of helping them to identify the best markets of affordable housing.

Also, recent legislation (SB 215) passed by the Montana Legislature no allows a county or a municipality to donate Tax-deed land to a nonprofit corporation for the construction of residential housing. These resources must now be located and encouraged for the development of affordable housing units. Private developers need to be assured of an adequate return on their investment.

#### **INCREASE ABILITY OF LOW AND MODERATE INCOME HOUSEHOLDS TO BUY HOMES**

Many low-income families currently living in rental housing would like to move into a home. The monthly mortgage payment is typically lower than rental costs in a non-subsidized unit. However, many people lack sufficient funds for the down payment and closing costs. A second complications relates to the type of housing being selected by the lower income household. In order to qualify for participation in various programs (Montana Board of Housing, FHA, VA) the house itself must be qualified. Some of the available housing is too high priced to qualify for the Board of Housing programs. Buyers are having difficulty finding a qualified house which they can afford.

#### **DESIRED ACTIONS**

The newly established HOPE and HOME programs will provide new sources of funds to assist first-time homebuyers in securing affordable housing. MDOC will continue to efficiently administer these programs.

The Montana Board of Housing 203(k) program, which assists home buyers in making repairs to homes in order to qualify for mortgage assistance, could be more widely utilized. The loan limitations contained in the program could be reviewed to reflect inflationary effects on the cost of renovation and compliance work. MDOC will work to expand this programs effectiveness.

## **INCREASE RESOURCES TO FINANCE HOUSING MAINTENANCE AND IMPROVEMENTS**

Funding is limited for improvements to homes and rental units, especially for elderly persons, persons who require special modifications for disabled access, for those experiencing high energy costs, and for those homes which are in violation of building codes. This violates Montana's policy of securing a suitable housing stock.

### **DESIRED ACTIONS**

Homeowners, renters, and landlords need education programs that teach them how to recognize seemingly small problems that need attention and how to do simple repairs themselves. Many general lack of knowledge available programs such as Montana Board of Housing Reverse Annuity Mortgage Program. This program allows senior citizens to tap into their home equity to secure resources for maintenance. Long-term housing rehabilitation loan funds could be made available through other avenues too. All these are to be available to low income households.

The State could identify programs to assist elderly persons who wish to stay in their own homes. These might include special community projects which employ persons to make needed repairs. CDBG funds may be used to leverage private dollars to establish revolving loan/grant funds. Under such a program public and private dollars could also be made available to senior homeowners to make repairs. As with the Reverse Annuity Program, the loan would be repaid when the house was sold.

## **SIMPLIFY HOUSING ASSISTANCE PROGRAMS**

Paperwork and documentation requirements are complex, detailed, and stringent and personnel needed for such activities are very limited. Perceptions are that rules, regulations, and available funds are too program-specific and difficult to properly target. Housing programs are run as separate, categorical programs with no comprehensive mechanism to combine programs to fit client's varied needs.

### **DESIRED ACTIONS**

MDOC will encourage agencies to coordinate program implementation efforts and pool their resources. The MDOC Housing Information Clearinghouse will incorporate all active programs in the State, include all assistance facilities, and provide contact names and program descriptions. This process will encourage a single-source information data base, able to respond to all housing- and program-related inquiries.

MDOC will work to provide simpler program access and administrative procedures. The CHAS Steering Committee will form a task force designed to inspect and recommend options for enhancing efficiency and practicality in program administration.

The CHAS process is intended to bring federal, state, and local government together with citizens, and the private sector to help develop a coordinated State plan.

A statewide database which identifies all disabled accessible living units in the State would help disabled persons, housing managers, and other housing advocates. Housing discrimination continues to be a significant obstacle for people with disabilities. It has been suggested that programs to test for discrimination be expanded and housing development projects be monitored for compliance with federal statutes regarding the number of accessible units.

## **WORK TO ENSURE FAIR HOUSING COMPLIANCE**

With rental units full and tenants experiencing difficulty with suitable housing, it has become easy to discriminate against the poor, the physically disabled, the mentally disabled, Native Americans, even the elderly. Landlords can, and do, pick and choose to whom they rent. Sexual harassment and unwarranted eviction have been reported.

### **DESIRED ACTIONS**

The general public, landlords, and tenants alike need to be better educated on fair housing practices. The State needs to affirmatively further fair housing practices in whatever way it can. Violations of fair housing practices need to be reported and handled in an effective way. MDOC will continue to ensure that each project approved under programs it administers will enforce fair housing regulations and requirements.

## **SECURE ADEQUATE RESOURCES FOR PERSONS REQUIRING SUPPORTIVE AND TRANSITIONAL SERVICES**

Homeless individuals and families and persons with disabilities require supportive services in conjunction with the provision of affordable housing. In particular, those persons with non-mobility related disabilities often require extensive special services, particularly those who are chronically homeless, chemically dependent, or mentally disabled.

### **DESIRED ACTIONS**

Preventative measures to keep people in their homes are desirable. Funds for short-term payment of mortgages until families find new employment would significantly reduce the number of homeless persons. As with other types of rental housing, incentives must be expanded to attract private dollars for the construction of additional transitional units. Further, the State is interested in providing housing assistance, and services, to those who may require it.

## **INCREASE ACCESSIBILITY IN THE HOUSING STOCK**

Accessibility is a critical issue for many disabled persons. Accessible housing must be developed for disabled persons. The development of capital resources is required to assist homeowners and rental unit managers in the rehabilitation of existing units to provide

accessibility. Both remedial and compensatory projects which accommodate the accessibility costs for property managers, landlords, and homeowners with disabilities are critically needed. Further, disabled renters need more assistance in rental deposits so that once units are available, initial occupancy costs are not prohibitive.

#### **DESIRED ACTIONS**

Work to promote accessible housing. Implement and utilize the Disabled Accessible Affordable Homeownership Program initiated late in FY 1993 by the Montana Board of Housing. Encourage support all applications for Section 811 funds.

#### **INCREASE ENERGY EFFICIENCY IN THE HOUSING STOCK**

Given the high cost of space heating in Montana, it has been suggested that greater emphasis be placed on the energy efficiency of rental units to assure lower utility costs to tenants. Multifamily projects which use innovative heating and cooling systems emphasizing conservation could be given preference.

#### **DESIRED ACTIONS**

Expand the use of weatherization funds to multifamily rental units. Promote long-term solutions to the energy efficiency problem through the Energy Efficient Housing Program for New Construction. Lobby for a larger percentage of LIEAP fund to be applicable to the weatherization of low-income homes.

#### **DECREASE HOUSING ENVIRONMENTAL HAZARDS**

A major environmental hazard affecting housing is lead-based paint. Montana programs related to control of lead-based paint hazards are in their infancy at the present time. Pre-1940 housing units, those most likely to contain lead-based paint, make up 17.1 percent of the total units in Montana. Of those units built before 1940, 25.4 percent are occupied by very low-income renters. Older rental units have higher rates of lead poisoning than do pre-1940 owner-occupied units. Of all renter households, about 58,010 are estimated to have lead-based paint. For owner-occupied households, 92,189 are estimated to have lead-based paint. This is not an indication of the number of households with a lead-based paint hazard; it is merely those most at risk. The findings of initial Superfund-related study by the Butte-Silverbow Health Department, when applied to the State, indicate that approximately 8,500 children may currently be at risk of lead poisoning.

Only two programs are currently functioning. East Helena has a lead program which is relatively small, screening approximately 50 children annually in the East Helena area only. The program is funded by ASARCO and is part of the Lewis and Clark County Health

Department.<sup>46</sup> The Butte Childhood Lead Poisoning Prevention Program is a comprehensive program funded by the Atlantic Richfield Corporation (ARCO). The Butte program is part of the Butte-Silver Bow County Health Department. Funds are used to support staff positions, screening activities, lab support, and environmental investigations.

#### **DESIRED ACTIONS**

The Montana Childhood Lead Poisoning Prevention Program will entail the creation of local programs within the communities thought to have the highest at-risk population: Great Falls and Missoula. The program would eventually incorporate other major cities not served and access for rural areas through the urban program. Activities for the first year include the launching of a statewide education and outreach effort, organizing the program in these two cities, and demonstrating a rural outreach model, accessing areas of southwestern Montana through the existing program in Butte. The first six months would be spent in selecting and training community staffs and launching the education program in each area. Screening, environmental assessments, and environmental and medical management would begin after the first six months.

The Montana Department of Health and Environmental Sciences (MDHES) has requested funds under the State and Community-Based Childhood Lead Poisoning Prevention Program. The funds will be used for the Montana Childhood Lead Poisoning Prevention Program. This program will be initiated by the Butte-Silverbow Health Department, under contract to MDHES. A secure funding source needs to be located.

Implementation should continue on a Lead Levels Advisory Committee with representatives from county and State government, the private non-profit sector, universities, physicians, and citizens. In addition, the Occupational and Radiological Health Bureau in the State Department of Health should complete their proposed program to certify training courses for workers, supervisors, and inspectors of lead-based paint evaluation sites.

#### **FURTHER THE PREVENTION OF HOMELESSNESS**

Homelessness, while not as prevalent a problem in Montana as in other states, continues to grow. With several areas experiencing very high rates of unemployment, continuing low wage rates, and some industries continuing to experience difficult to adverse economic conditions, homelessness may continue to threaten many Montana citizens. Actions need to be taken to prevent others from becoming homeless.

#### **DESIRED ACTIONS**

These actions will include additional training and counseling. Such actions, while not always directly a housing program, will involve local and state social service agencies in the

---

<sup>46</sup> The East Helena Lead Program began in conjunction with an overall environmental investigation associated with area smelting activities.

development of transitional housing, permanent housing, and employment training. Their immediate needs relate to affordably priced permanent housing, medical health services, food, and clothing.

## **FURTHER SUPPORT SERVICES FOR RUNAWAY AND HOMELESS YOUTH**

As noted in the SRS survey of homelessness in the State, homeless youth were the only group that was turned away from the facilities during the winter count. This should have happened.

### **DESIRED ACTIONS**

Montana will attempt to secure a more stable stream of funding to support services for the young. This group suffers from behavior anomalies and has had difficulty adjusting to adulthood. Alcohol and drug treatment, emotional and mental counseling, job training, and other services are required.

## **A. PRIORITY ANALYSIS AND STRATEGY DEVELOPMENT GEOGRAPHIC DISTRIBUTION AND IMPLEMENTATION**

Housing needs across the State of Montana vary widely. The extreme diversity in available housing, the age of the housing stock, and the overall range in population density complicate assessments of the degree of need. There is a broad array of housing availability, affordability, and suitability problems. The State believes that simply treating the symptoms of the malady will not be sufficient to solve the problems. Resources do not appear to be adequate to completely deal with the housing needs and requirements that plague the State.

The State intends to implement its annual plan Statewide (except for the entitlement areas of Billings and Great Falls) and using funds in a competitively based process founded on needs identified at the local level. This means that each local entity must evaluate its needs carefully, articulate them well, present a plan to acquire program resources, and compete with other jurisdictions applying for funds. Montana does not have sufficient resources to fulfill all requests, or to address all problems at the same time. Those best planned and articulated receive funding within a competitive arena. generally, CDBG funds will be spend in non-entitlement areas and HOME Program funds will be available Statewide.

The needs identified and prioritized at the State level may not retain a similar priority rating for implementation at the local level. The statewide priority classification represents only a general indicator of anticipated applications; actual application activity by local jurisdictions may be different, as the identification and quantification of need at the local level is incumbent upon the local community.

The programs historically have been implemented on a statewide competitive basis, and entities receiving CDBG funds are forced to draw down their allocations by 75 percent before they are eligible to apply for additional program funds. This method has been shown to disburse funds equitably throughout the State, allowing all entities an equal chance to apply for funds. Therefore, program activities associated with entitlement areas, non-entitlement metro areas, and rural areas are all represented.

CHAS Table 2 presents the priority rating for each type of in-need group. These ratings are summarized in the narratives below.

## **PRIORITY #1 - RENTER AND HOMEOWNER HOUSEHOLDS**

For the following discussion, all priority 1 categories are accumulated, as the analysis and public comments relate to one or more of the assistance segments within these categories of very low, low, and moderate renter and homeowner households, with the exception of moderately low income renters and very low income first time home buyers, which are each covered later. The service delivery and management system is described by program.

### **i. STRATEGY IMPLEMENTATION - INVESTMENT PLAN**

The State of Montana has a wide array of programs it intends to implement, deliver, or manage throughout the upcoming five-year period, as they pertain to securing affordable housing opportunities for renters and homeowners. These are briefly reviewed below. The program descriptions are followed by an overall listing by activity type.

#### **HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The program expands the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdictions, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include tenant-based rental assistance; assistance to first-time home buyers; property acquisition; new construction (justification required for neighborhood revitalization, special needs); reconstruction, relocation, or demolition; moderate or substantial rehabilitation; site improvements; and other activities related to development of non-luxury housing, such as transitional housing.

All states, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income facilities to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. Transitional housing is included. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of

interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

### **HOPE 1 (Public Housing Homeownership) Program**

The HOPE 1 Program is to assist in providing affordable homeownership for residents of public and Indian housing. HOPE 1 funds are available in planning and implementation grants. Eligible activities for planning grants include: replacement housing; development of resident councils; counseling; training and technical assistance; underwriting feasibility studies; preliminary architectural work; and development of security plans.

The maximum planning grant amount is \$200,000, and it does not require matching funds. Mini planning grants are available. With implementation grants, a grantee can fund rehabilitation; replacement reserves; legal fees; relocation; economic development activities; and administrative and operating costs. Implementation grants support the cost of developing the housing. There is no cap on overall grant amounts, but some eligible activities are capped. This type of grant requires non-federal matching funds. Both grant types are awarded on a competitive basis.

Resident management corporations, resident corporations, cooperative associations, public or nonprofit organizations, public bodies or agencies, Public Housing Authorities, and Indian Housing Authorities are eligible to apply for HOPE 1 grants.

*Contact person: HUD-Denver, Office of Public Housing (303) 844-4762.*

### **HOPE 2 (Homeownership of Multifamily Units) Program (Title IV)**

The HOPE 2 program was authorized in subtitle B of Title IV of the National Affordable Housing Act of 1990. Program funds are to be used to assist in developing homeownership opportunities for low-income persons by providing planning and implementation grants to organizations that will help families purchase and maintain units in multifamily projects. The projects must be owned by the government, FHA-distressed, or subject to mortgages that are insured or held by HUD. Resident councils, resident management corporations, cooperative associations, mutual housing associations, public or private nonprofit organizations, public housing agencies and Indian housing authorities are eligible to apply. Joint applications may be submitted. Grants are awarded competitively. Planning grants can be no more than \$200,000, while mini planning grants may be only \$100,000. They can be used for: development of resident councils; counseling; training and technical assistance; underwriting feasibility studies; preliminary architectural work; and development of security plans.

Implementation grants must be matched with non-federal funds that are at least 33 percent of the grant amount. The maximum implementation grant is based on the present published Section 8 Existing Fair Market Rents over a 10-year period. These grants can fund: rehabilitation; replacement reserves; legal fees; relocation; economic development activities; administrative and operating costs; and acquisition.

*Contact person: Lois Tressler, Office of Housing, HUD-Denver Regional Office (303) 844-4959.*

### **HOPE 3 (Homeownership of Single Family Homes) Program**

HOPE 3 provides financial assistance for homeownership. Planning grants may be used for feasibility studies, technical assistance for grant recipients, researching the availability of properties, preparing applications for implementation grants, and program planning. HOPE 3 implementation grants may be used for the following: acquiring and rehabilitating property; assisting first-time home buyers in purchasing units; economic development to promote self-sufficiency of home buyers; administrative costs; replacement reserves; and home buyer outreach selection and counseling. Eligible sources for housing are single family residential properties currently owned or held by HUD/FHA, VA, RTC, FDIC, DoD, GSA, DoT, FmHA, all other federal agencies, and state or local governments (including their agencies).

HOPE 3 eligible applicants include private nonprofit organizations, public agencies, cities, states, counties, and PHAs or IHAs in cooperation with a private nonprofit or cooperative association. Grants are awarded competitively: planning grants within a national pool,

implementation grants in a regional pool. Planning grants cannot exceed \$100,000; implementation grants must be under \$3 million.

*Contact person: David Jacops, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **HOPE for Youth (YOUTHBUILD)**

The HOPE for Youth program was created as section 164 of the Housing and Community Development Act of 1992, which added it as a new subtitle D to the 1990 National Affordable Housing Act. Under YOUTHBUILD, the energies and abilities of youth who have dropped out of school or are in danger of dropping out would be utilized to develop permanent and transitional affordable housing for low-income families and the homeless, and to reconstruct urban neighborhoods. The program is geared toward young men and women aged 16 to 24. It provides academic and basic skills in preparation for a high school equivalency diploma and construction trades training. Half of the youth's time will be spent working and the other half would be spent in the actual construction or rehabilitation of housing under the supervision of trained and licensed construction workers. Regulations for this program are still being written.

### **Low-income Housing Preservation and Resident Homeownership Program (Title VI)**

The Low-income Housing Preservation and Homeownership Program was authorized in Title VI of the National Affordable Housing Act of 1990. The program provides competitive grants to assure the continuation of Section 221(d)(3) and Section 236 projects, whose low-income use restrictions could otherwise expire after 20 years of the final mortgage endorsement. The grants are financial incentives to retain project-subsidized housing projects, and to encourage sales to purchasers who will keep the property for low-income persons. Resident corporations, owners of low-income housing, nonprofit organization, state or local agencies, or any entity that agrees to maintain low-income affordability restrictions may apply for funding.

*Contact person: Richard Fox, Office of Housing, HUD-Denver Regional Office (303) 844-5351.*

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing

at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

## **Energy Programs**

Energy program funds are available from the Department of Energy and other agencies. Allocations can be used for rehabilitation and new construction.

### **A. Weatherization**

Energy costs are one of the greatest demands on a low-income family's resources. During Montana's winter, these costs can exceed rental or mortgage costs. The weatherization program administered by the Montana Family Assistance Bureau is 100 percent funded by the Department of Energy and Department of Health and Human Services. The program is designed to help low-income persons reduce their home heating costs and to conserve natural resources. The funds are directed toward local Human Resource Development Councils (HRDCs) and tribal organizations. These organizations decide where the grant money will be spent to install energy saving measures in the homes of low-income persons. Homes are prioritized based on energy consumption.

Specific measures are decided upon after each home has had an energy audit to determine which activities would be most cost-effective. Measures include insulation, caulking, furnace repair and replacement. All labor and materials are purchased locally. By reducing overall

costs, weatherization helps a family stay in their home, increasing family self-sufficiency. Income not spent on utility bills stays in the local economy, as does money spent on labor and materials.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

## **B. Low Income Energy Assistance Program (LIEAP)**

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

## **C. Energy Efficient Housing Program for New Construction**

The Energy Efficient Housing Program for New Construction is planned by the Montana Bureau of Housing and Department of Natural Resources and Conservation as a means to assist middle-income persons with payments on newly constructed energy efficient housing. It would set up a mortgage insurance pool from which funds could be drawn. FHA would insure the first \$75,500 of the loan at 5 percent interest (their maximum) and the State the rest (also at 5 percent) up to \$97,700 (the IRS-allowed ceiling on mortgages financed with BOH tax-exempt bonds). The FHA maximum mortgage level is \$85,400 in Gallatin County, \$83,600 in Missoula County, \$83,050 in Cascade and Yellowstone counties, and \$75,500 in the remaining counties.

The two loans would total out to 95 percent of the appraised value of the house. There would be a single monthly payment on the loans. The maximum the State would need to insure is the difference between these two amounts, or \$22,200 per house. Houses will most likely fall into the \$85,000 to \$95,000 range. Each house would need certification of energy efficiency to qualify for the loans. The program could start with a \$300,000 appropriation of oil overcharge funds currently available to the State, and would expand the coverage of existing BOH programs. The insurance pool would be sustained with home owner contribution of 3 percent initial and 1.5 percent annual, paid monthly, mortgage insurance premium and utility contributions to the pool. It would be maintained at an initial maximum value of 25 percent of the dollar amount invested in second mortgages.

*Contact person: Alan Davis, Bureau Chief, Montana Planning and Analysis Bureau, Energy Division, Dept. of Natural Resources and Conservation (406) 444-6756.*

### **Low Income Housing Tax Credit Program**

The low income housing tax credit is available under Section 42 of the Internal Revenue Code of 1986. The credit was first allocated in Montana in 1987. The federal income tax credit is available to owners of qualifying rental housing which meets stated rent limitation and low-income occupancy requirements. Owners of all buildings, except for certain buildings financed with tax-exempt bonds, must obtain a credit allocation from the appropriate state agency before claiming the tax credit. The Montana Board of Housing allocates the credit for housing located in Montana. The credit allowance for each state will be no greater than \$1.25 per State resident.

The tax credit is for residential rental buildings which are available to the general public and are part of a qualifying low-income project. Ineligible units include transient housing (initially leased for less than six months), buildings of four or fewer units which are occupied by the owner or a relative of the owner, nursing homes, life care facilities, retirement homes providing services other than housing, dormitories, and trailer parks.

The tax credit may be used in conjunction with the construction, substantial rehabilitation, or acquisition and substantial rehabilitation of qualifying residential rental housing.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **MONTANA BOARD OF HOUSING PROGRAMS**

The Montana Board of Housing was created by the Montana Housing Act of 1975 in order to alleviate the high cost of housing for low-income persons and families. The funds to operate the programs administered under the act are generated through either the sale of tax-exempt bonds or from administrative fees. The board's programs fall into two categories: home ownership and multifamily programs. Each are described below.

*Contact person (all Montana Board of Housing programs): Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **HOME OWNERSHIP PROGRAMS**

#### **Single Family Bond Program (initiated in 1977)**

The Board of Housing works with approximately 80 lenders statewide to provide mortgages 1.5 percent below conventional rates to assist primarily first-time home owners. In certain target areas, the borrowers need not be first-time purchasers. The program has assisted over 18,000 Montanans to date, at a rate of 1,000 to 1,500 purchases per year. Average household income for the program is \$27,290, with a maximum family income limitation established by the BOH. Since 1975, \$734 million in bond proceeds have been loaned to home buyers.

**Mortgage Credit Certificate Program (initiated in 1987)**

This program enables moderate and low-income individuals to convert 20 percent of their annual mortgage interest expense from an itemization (income deduction) to a federal tax credit (tax payment reduction). Average household income of those served under this program was \$28,466. A total of 2,476 individual and family households have been assisted through this program since inception.

**Home Buyers Cash Assistance Program (initiated in May 1991)**

This program provides cash assistance to close a loan for home buyers having an income of no more than \$23,000. Funds may be used for up to 50 percent of the minimum cash required to close a loan (maximum advance of \$1,000), and these funds are combined with 6 $\frac{7}{8}$  percent, 30-year mortgage money. Purchase price of the home may not exceed \$50,000. Since its inception, the program has provided permanent financing of \$4,917,213 for 138 homes. In addition to permanent financing, the program provided \$119,778 in cash assistance with closing costs. Average household income for this program was \$17,209.

**203(k) Rehabilitation Home Mortgage Program (initiated March 1992)**

The Board of Housing set aside \$5 million to provide a firm secondary market for the acquisition and rehabilitation of an existing dwelling not meeting minimum FHA standards. The home is to be owner-occupied with limited business use of the property. The purchaser is to be a first-time homebuyer except for certain targeted areas. This program is conducted in conjunction with the Department of Housing and Urban Development. The maximum loan amount is \$60,000 and family income may not exceed \$30,000. The refinancing of an existing home loan is not permitted. The board has purchased two loans for \$100,750.

**Montana Manufactured Housing Program (initiated September 1992)**

The Board of Housing set aside \$4.5 million to finance single family manufactured housing installed on a permanent foundation on titled (owned) property. Lot cost, well, and septic can be included in the loan. These are 30-year loans with a 7 $\frac{3}{4}$  percent fixed rate of interest for first-time homebuyers or single parents (a separated or divorced person that was co-owner of a house) with annual household income at or below \$25,000.

**Disabled Accessible Affordable Homeownership Program (initiated July 1, 1993)**

The board set aside \$3.5 million to provide affordable architecturally accessible homes for people with disabilities such that they can live independently. The board has approved for eligibility 55 applications for individuals/families with an average annual income of \$14,249.

## **MULTIFAMILY PROGRAMS**

### **Multifamily Rental Housing Program for Non-Profits (initiated February 1993)**

The Rental Housing Program provides mortgage funds for affordable rental housing for low-income Montanans. It is intended to use capacity and knowledge of local governmental units and non-profits to develop affordable housing to meet local needs. Funds are to be used to provide construction and permanent financing for projects meeting the terms and conditions detailed below. Proposals will be accepted from governmental units and non-profits based on a RFP distributed by the BOH. Due to tax law restrictions, applicants for the pilot project are limited to governmental units or nonprofit subsidiaries of governmental units. Approximately \$50,000 of the \$2.5 million available can be lent to other nonprofit groups such as HRDCs, Neighborhood Housing Services, and other private, nonprofit special needs corporations. The eligible applicant must be the owner of the project, must oversee the construction, and must be the property manager for projects financed under this program. The eligible applicant may contract with private industry for various segments of the project.

### **Multifamily Bond Program (initiated 1978)**

From 1978 until 1982, the Board of Housing issued tax exempt bonds to finance the construction of new, or the rehabilitation of existing, low-income multifamily housing. During that period, the board financed 668 multifamily units for low-income families and the elderly. During FY 1993, the board made preliminary commitments of loan funds through the Multifamily Pilot Program for Rental Housing to non-profit and governmental sponsors of seven projects. These projects total \$2,023,253 in loan funds, \$4,723,005 in projected costs, and will provide 79 units of affordable rental housing. All of the projects are anticipated to be constructed in 1994.

### **Low Income Housing Tax Credit Program (initiated 1987)**

This program made use of federal tax credits to provide incentives to developers to provide low-income housing. Housing built under the program was restricted to individuals with incomes at or below 60 percent of HUD median income. In addition, rents were restricted to 30 percent of monthly median income. The board allocated \$639,735 in federal tax credits for 154 units of rental housing. The city of Billings received 60 of these units, with a total of \$284,169 in tax credits. Three projects allocated credits in FY 1993 were placed in services in that year, as were two projects allocated carryover credits in prior years. These projects total 46 units and \$72,310 in tax credits (projects allocated in FY 1993) and 79 units and \$147,923 in tax credits (projects allocated carryover credits in prior years.) Through FY 1993, the board allocated a total of \$2,917,629 in tax credits for a total of 943 units of rental housing in 38 projects.

## **ELDERLY PROGRAMS**

### **Reverse Annuity Mortgage Loan Program for Elderly Persons (initiated 1989)**

This program enables persons 68 years or older to benefit from an additional income source: their home equity. In addition to other uses, the funds may be used to make repairs or improvements to the home. The program has assisted 14 senior homeowners since it began taking applications. Funds committed to these loans totaled \$364,800. Average annual income for these borrowers was \$7,722.

### **PRIORITY #1 - NON-HOMELESS PERSONS WITH SPECIAL NEEDS i. STRATEGY IMPLEMENTATION - INVESTMENT PLAN**

#### **Reverse Annuity Mortgage Loan Program for Elderly Persons (initiated 1989)**

This program enables persons 68 years or older to benefit from an additional income source: their home equity. In addition to other uses, the funds may be used to make repairs or improvements to the home. The program has assisted 14 senior homeowners since it began taking applications. Funds committed to these loans totaled \$364,800. Average annual income for these borrowers was \$7,722.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

#### **Disabled Accessible Affordable Homeownership Program (initiated July 1, 1993)**

The Montana Board of Housing set aside \$3.5 million to provide affordable architecturally accessible homes for people with disabilities such that they can live independently. The board has approved for eligibility 55 applications for individuals/families with an average annual income of \$14,249.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

#### **Supportive Housing for Persons with Disabilities (Section 811)**

Section 811 grant monies are awarded to private, nonprofit organizations providing assistance to expand housing with supportive services for persons with disabilities. This often includes group homes, independent living facilities, and intermediate care facilities. Section 811 is targeted for persons with a physical disability, developmental disability, or chronic mental illness which is expected to be of long and indefinite duration, substantially impedes the person's ability to live independently, and is of such a nature that such ability could be improved by more suitable housing conditions.

The program was authorized by the National Affordable Housing Act, Section 811. The competitive grants are available in two forms: capital advances based on the development cost limits published in the *Federal Register*, and project rental assistance to cover the difference between the HUD-approved operating costs and 30 percent of the residents adjusted income. Occupancy is open to very low-income persons between the ages of 18 and 62.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Housing Opportunities for Persons With AIDS**

The Housing Opportunities for Persons with AIDS program (HOPWA) was established by the National Affordable Housing Act. In order to more expeditiously address the pressing needs of persons with AIDS and related diseases, HUD published a July 1992 interim rule. The rule describes two types of HOPWA grants: formula entitlement grants (90 percent of funds allocated) and competitively awarded grants (10 percent of funds allocated). HOPWA grants are to provide states and localities with the resources and incentives to devise long-term strategies for meeting the needs of low-income persons with AIDS and related diseases.

To qualify for a formula allocation, states or eligible metropolitan areas must have more than 1,500 cases of AIDS, a HUD-approved CHAS, and (for EMAs) a population of more than 500,000 people. For states, the 1,500 AIDS cases must be outside state EMAs. In December 1992, \$90 million dollars in assistance was made available for formula allocations.

All localities and states, regardless of population and number of AIDS cases, may apply for grants on projects of national significance. National significance is determined by the innovation of the project compared to other applying projects, and the potential for replication of the project. Funding for five grants to nationally significant projects was announced in August 1992 (*August 25, 1992, Federal Register*). Funding for five other projects was also announced at that time. These funds were aimed at states which did not qualify for formula grants, localities outside of EMAs, and localities inside EMAs that do not have a HUD-approved CHAS. For the FY 1992 competitive grant program, only government organizations could apply for funds. An additional \$10 million for competitive grants is expected to be announced in a later NOFA. Most activities proposed by the applicant will be considered for eligibility.

*Contact person: Bruce Desonia, Sexually Transmitted Diseases/AIDS, Dept. of Health and Environmental Sciences (406) 444-3565; Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **HOPE for Youth (YOUTHBUILD)**

The HOPE for Youth program was created as section 164 of the Housing and Community Development Act of 1992, which added it as a new subtitle D to the 1990 National Affordable Housing Act. Under YOUTHBUILD, the energies and abilities of youth who have dropped out of school or are in danger of dropping out would be utilized to develop permanent and transitional affordable housing for low-income families and the homeless, and to reconstruct

urban neighborhoods. The program is geared toward young men and women aged 16 to 24. It provides academic and basic skills in preparation for a high school equivalency diploma and construction trades training. Half of the youth's time will be spent working and the other half would be spent in the actual construction or rehabilitation of housing under the supervision of trained and licensed construction workers. Regulations for this program are still being written.

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

## **PRIORITY #1 -- HOMELESS PERSONS**

### **i. STRATEGY DEVELOPMENT - INVESTMENT PLAN**

#### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities

that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income families to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. Transitional housing is included. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

## **HOME Investment Partnership Program**

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The program expands the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdictions, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include tenant-based rental assistance; assistance to first-time home buyers; property acquisition; new construction (justification required for neighborhood revitalization, special needs); reconstruction, relocation, or demolition; moderate or substantial rehabilitation; site improvements; and other activities related to development of non-luxury housing, such as transitional housing.

All states, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

## **Homeless Assistance Grants/Emergency Shelter Grants Program**

The Family Assistance Division's Homeless Assistance grants are to help improve the quality of existing emergency shelters for the homeless, to make available additional shelters, to meet the costs of operating shelters and of providing essential social services to homeless individuals to help prevent homelessness. The grants are 100 percent funded by the Health and Human Services and Housing and Urban Development departments. According to federal law, 95 percent of funds received must be allocated to the 12 regional Human Resource Development Councils (HRDCs). The grants fund the renovation, rehabilitation, or operating costs of homeless shelters, and the provision of follow-up and long-term services to help homeless persons escape poverty. Shelters to be assisted and service to be delivered are determined by the HRDCs. In FY 1993, the department will receive \$115,000 of HUD and \$73,361 of HHS homeless funding.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

## **Rural Homelessness Grant Program**

Rural Homelessness grants provide direct emergency assistance, homeless prevention assistance, and assistance for permanent housing. Private nonprofit organizations, Indian tribes, county and local governments may apply. Other eligible areas are all areas outside of Metropolitan Statistical Areas and rural census tract within MSAs. The grants are designed for the following: rent, mortgage, or utility assistance; security deposits; support services; rehabilitation; short-term emergency lodging; transitional housing; cost of using federal inventory property programs; and capacity building.

## **Shelter Plus Care Program**

Shelter Plus Care grants help to provide housing and supportive services on a long-term basis for homeless people with disabilities, especially serious mental illness, chronic drug or alcohol problems, and AIDS. Program grants are used for the provision of rental assistance payments through Section 8 Moderate Rehabilitation (SRO), sponsor-based rental assistance (SRA), tenant-based rental assistance (TRA), or project-based rental assistance (PRA). HUD requires that 10 percent of total funds be made available for each of these four program types.

S+C funds are awarded in a nationwide competition, with priority given to homeless needs. States, units of local government, Indian tribes, and Public Housing Authorities can apply for Shelter Plus Care (S+C) grants. Support services must match rental assistance and must be supplied by federal, state, or local governments; or private sources.

Non-PHA applicants applying for the SRO component must subcontract with a PHA to administer the rental housing assistance. Applicants for the SRA must subcontract with a nonprofit organization, also called a sponsor, to provide rental assistance to sponsor-owned or leased units. PRA applicants must subcontract with a building owner to provide rental assistance for units in a particular property.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

## **Supportive Housing Program**

This program was created by the Housing and Community Development Act of 1992. It replaces the Supportive Housing Demonstration Program (Transitional Housing Demonstration Program and Permanent Housing for Handicapped Homeless Program) and Supplemental Assistance for Facilities to Assist the Homeless (SAFAH). It incorporates many features of these programs into one program of assistance to governmental entities and private nonprofit organizations to provide housing and supportive services to homeless people. In FY 1993, \$100 million will be available for the program. The Supportive Housing Program provides funding under four main components:

Transitional housing to facilitate the movement of homeless individuals and families to permanent housing.

Permanent housing that provides long-term housing for homeless people with disabilities (including AIDS and related diseases).

Housing that is part of a particularly innovative project for meeting the immediate and long-term needs of homeless individuals and families.

Supportive services for homeless individuals and families not provided in conjunction with supportive housing facilities.

The SHP covers acquisition, rehabilitation, new construction, leasing of structures, operating costs, supportive services, and administrative costs. Grants for operating costs are up to 75 percent for the first two years, and 50 percent for the next three years. Funds for acquisition, rehabilitation, and new construction must be equally matched by cash from other sources. Grants are available to states, local governments, other government entities, Indian tribes and housing authorities, private nonprofit organizations, and community mental health associations that are public nonprofit organizations.

Transitional Housing for the Homeless, Supplemental Assistance for Facilities to Assist the Homeless (SAFAH), and Permanent Housing for Disabled Homeless Persons were incorporated into the Supportive Housing Program.

*Contact person: Nicole Kelso, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

## **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

## Safe Havens Demonstration Program

Safe Havens grants are to provide very low-income housing for homeless people with serious mental illnesses. Funds may be used for new construction, acquisitions, rehabilitation, leasing assistance, low-demand support services, outreach activities for eligible persons, and operating costs. Governments and private and public organizations may apply for funding. Total assistance may not exceed \$400,000 in five years, and all funds must be matched. This program is not yet in place.

### PRIORITY #2

#### MODERATE INCOME SMALL AND NON-ELDERLY RENTER HOUSEHOLDS

##### i. ANALYSIS OF RANK #2

The State of Montana feels that the value of local need takes precedent, in planning, over a "top-down" management approach. It has been encombant upon local jurisdictions to demonstrate the degree of local need during applications for funds during competitive processes. Unfortunately, Housing and Urban Development regulations seem to indicate that by allowing local preference in planning (i.e.; allowing for the prospect that all housing activities can be ranked with a #1 priority rating) Montana's planning process would be unacceptable. Under these circumstances, bidding for competitive projects in interstate competition would penalize Montana's applicants. Therefore, since HUD approves, or disapproves, of Montana's CHAS process results, HUD thereby nullifies local need in lieu of statewide categorization. All Priority #2 classifications do not reflect State needs, but are assessed so that the CHAS document is in compliance with federal guidelines.

##### ii. STRATEGY DEVELOPMENT -- INVESTMENT PLAN

#### HOME Investment Partnership Program

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The purpose of the program is to expand the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdiction, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include

- Tenant-based rental assistance;
- Assistance to first-time home buyers;

- Property acquisition;
- New construction (justification required for neighborhood revitalization, special needs);
- Reconstruction, relocation, or demolition;
- Moderate or substantial rehabilitation;
- Site improvements;
- Conversions;
- Tenant based rental assistance; and,
- Other activities related to development of non-luxury housing (with approval of HUD).

All States, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

### **Community Development Block Grant Program**

Montana administers non-entitlement CDBG funds through the Community Development Bureau of MDOC. The State makes grants only to units of general local government that carry out development activities. Montana has developed funding priorities and criteria for selecting projects which revolve around three major objectives: developing community development objectives; deciding how to distribute funds among communities in non-entitlement areas; and ensuring that recipient communities comply with all applicable state and federal laws and requirements. Montana's Community Development Block Grant Program is a federally-funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low and moderate income persons.

The basic categories for local community development projects are: housing, public facilities, and economic development. The CDBG program provides grants to carry out a wide range of community development activities directed toward neighborhood revitalization, economic development, and improved community facilities and services. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new housing (when sponsored by a non-profit organization); provision of public facilities and improvements such as water and sewer, solid waste and senior citizen centers; and assistance to for-profit businesses to help with economic development activities that will result in the creation or retention of jobs.

Regarding the housing category, CDBG funds are most often used to make low or no interest loans to low and moderate income facilities to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include the site improvements to publicly-owned land or land owned by a non-profit organization to be used or sold for new housing. The clearance or acquisition of sites for use or resale for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities. A new eligible activity includes homebuyer assistance to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage to expand home ownership among low and moderate income persons. These activities include the subsidy of interest rates and mortgage amounts for low and moderate income homebuyers, financing the acquisition of housing that is occupied by the homebuyers, providing up to 50 percent of any down payment required, or paying reasonable closing costs.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for persons of low and moderate income. Sixty percent of the funds must be used for activities which benefit low- and moderate-income persons.

Anticipated activities include:

- acquisition of property for public purposes;
- construction of public works projects;
- demolition;
- rehabilitation of public and private buildings;
- public services;
- planning activities;
- assistance to non-profits for community development activities;
- assistance to for-profit businesses for economic development activities;

The CDBG Program will deny some activities that are ineligible. These tend to be:

- government buildings;
- political activities;
- income payments;
- new housing and other facilities offering 24-hour care;

*Contact person: Gus Byrom, Community Development Bureau (406) 444-4479.*

### **Supportive Housing for the Elderly (Section 202)**

Supportive Housing for Elderly Persons provides funding to expand the supply of housing with supportive services for very low-income persons 62 years of age or older. Initial legislation authorizing this program was enacted in the Housing Act of 1959 (Section 202), and was amended in 1990 by Section 801 of the National Affordable Housing Act. Section 202 funding falls into two categories: capital advances and project rental assistance. Capital advances are to finance elderly housing that also offers supportive services. The advances are non-interest bearing, and are based on development cost limits published in the *Federal Register*. Project

rental assistance covers the difference between the HUD-approved cost per unit and the amount the resident pays. Monies cannot go toward debt service. Funds can be used for acquisition, rehabilitation, new construction, rental assistance, and support services for households containing at least one person over 62 years of age. Private, nonprofit, and consumer cooperatives are eligible to apply.

*Contact person: Lorin Hunt, Office of Housing, HUD-Denver Regional Office (303) 844-6261.*

### **Section 8 Moderate Rehabilitation Program for Single Room Occupancy (SRO)**

Under the Section 8 Mod Rehab SRO program, HUD enters into annual contributions contracts with PHAs in connection with the moderate rehabilitation of residential properties which will contain multiple single room dwelling units. Funding can be used for operating expenses, debt service for rehabilitation financing, and monthly rental assistance. Resources to fund the cost of unit rehabilitation must come from other sources, and units must need a minimum of \$3,000 in rehabilitation. PHAs, IHAs and private nonprofit organizations can apply for grants. For FY93, however, nonprofit organizations must subcontract with a PHA to administer SRO rental assistance. Grants are awarded in a nationwide competition on the basis of need and ability to undertake an SRO program.

Due to limited resources, HUD will only accept applications that propose to assist homeless individuals and those already living in units eligible for Section 8 assistance. In order to assure some assistance to homeless people, 50 percent of the units proposed for assistance must be vacant at the time of application submission.

*Contact person: Kathryn Smouse-Hulse, Office of Community Planning and Development, HUD-Denver (303) 844-5121; George Warn, Housing Assistance Bureau, (406) 444-2804.*

### **Low Income Energy Assistance Program (LIEAP)**

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

### **Multifamily Rental Housing Program for Non-Profits (initiated February 1993)**

The Rental Housing Program provides mortgage funds for affordable rental housing for low-income Montanans. It is intended to use capacity and knowledge of local governmental units and non-profits to develop affordable housing to meet local needs. Funds are to be used to provide construction and permanent financing for projects meeting the terms and conditions detailed below. Proposals will be accepted from governmental units and non-profits based on a Request for Proposal distributed by the BOH. Due to tax law restrictions, applicants for the pilot project are limited to governmental units or nonprofit subsidiaries of governmental units. Approximately \$50,000 of the \$2.5 million available can be lent to other nonprofit groups such as HRDCs, Neighborhood Housing Services, and other private, nonprofit special needs corporations. The eligible applicant must be the owner of the project, must oversee the construction, and must be the property manager for projects financed under this program. The eligible applicant may contract with private industry for various segments of the project.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

### **Multifamily Bond Program (initiated 1978)**

From 1978 until 1982, the Board of Housing issued tax exempt bonds to finance the construction of new, or the rehabilitation of existing, low-income multifamily housing. During that period, the board financed 668 multifamily units for low-income families and the elderly. During federal fiscal year 1993, the board made preliminary commitments of loan funds through the Multifamily Pilot Program for Rental Housing to non-profit and governmental sponsors of seven projects. These projects total \$2,023,253 in loan funds, \$4,723,005 in projected costs, and will provide 79 units of affordable rental housing. All of the projects are anticipated to be constructed in 1994.

*Contact person: Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

## **PRIORITY #2 VERY LOW INCOME FIRST TIME HOME BUYERS**

### **i. ANALYSIS OF PRIORITY #2**

The State of Montana feels that the value of local need takes precedent, in planning, over a "top-down" management approach. It has been encombant upon local jurisdictions to demonstrate the degree of local need during applications for funds during competitive processes. Unfortunately, Housing and Urban Development regulations seem to indicate that by allowing local preference in planning (i.e.; allowing for the prospect that all housing activities can be ranked with a #1 priority rating) Montana's planning process would be unacceptable. Under these circumstances, bidding for competitive projects in interstate competition would penalize Montana's applicants. Therefore, since HUD approves, or disapproves, of Montana's CHAS process results, HUD thereby nullifies local need in lieu of statewide categorization. All

Priority #2 classifications do not reflect State needs, but are assessed so that the CHAS document is in compliance with federal guidelines.

## ii. STRATEGY DEVELOPMENT -- INVESTMENT PLAN

### HOME Investment Partnership Program

The HOME program, administered by the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The purpose of the program is to expand the supply of decent, affordable housing for low- and very low-income families, emphasizing rental housing; to build state and local capacity to design and carry out affordable housing programs; to provide financial and technical assistance to participating jurisdiction, including model program development; and to strengthen partnerships among all levels of government and the private sector in the development of affordable housing.

The program does not require specific activities. However, certain, cost-effective activities are encouraged through lower local matching contribution requirements. Eligible activities include

- Tenant-based rental assistance;
- Assistance to first-time home buyers;
- Property acquisition;
- New construction (justification required for neighborhood revitalization, special needs);
- Reconstruction, relocation, or demolition;
- Moderate or substantial rehabilitation;
- Site improvements;
- Conversions;
- Tenant based rental assistance; and,
- Other activities related to development of non-luxury housing (with approval of HUD).

All States, metropolitan cities, urban counties and contiguous units of local government are eligible to apply for HOME funds. All HOME funds must assist families below 80 percent of the area median income. One percent of HOME funds is set aside for Indian tribes. Each jurisdiction must allocate 15 percent to programs owned, developed, or sponsored by CHDOs. HUD will issue successful applicants an account (Home Investment Trust Fund) with a line of credit to be used on the approved housing strategy. HOME funds are distributed on a competitive basis.

*Contact person: Tim Burton, HOME Program Manager, Housing Assistance Bureau (406) 444-0094.*

## MONTANA BOARD OF HOUSING PROGRAMS

The Montana Board of Housing was created by the Montana Housing Act of 1975 in order to alleviate the high cost of housing for low-income persons and families. The funds to

operate the programs administered under the act are generated through either the sale of tax-exempt bonds or from administrative fees. The board's programs fall into two categories: home ownership and multifamily programs. Each are described below.

*Contact person (all Montana Board of Housing programs): Richard Kain, Administrator, Montana Board of Housing (406) 444-3040.*

## **HOME OWNERSHIP PROGRAMS**

### **Single Family Bond Program (initiated in 1977)**

The Board of Housing works with approximately 80 lenders statewide to provide mortgages 1.5 percent below conventional rates to assist primarily first-time home owners. In certain target areas, the borrowers need not be first-time purchasers. The program has assisted over 18,000 Montanans to date, at a rate of 1,000 to 1,500 purchases per year. Average household income for the program is \$27,290, with a maximum family income limitation established by the BOH. Since 1975, \$734 million in bond proceeds have been loaned to home buyers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

### **Mortgage Credit Certificate Program (initiated in 1987)**

This program enables moderate and low-income individuals to convert 20 percent of their annual mortgage interest expense from an itemization (income deduction) to a federal tax credit (tax payment reduction). Average household income of those served under this program was \$28,466. A total of 2,476 individual and family households have been assisted through this program since inception. While the program is mainly to assist first-time home owners, in certain target areas, the borrowers need not be first-time purchasers. The home is to be owner-occupied with limited business use of the property. The purchase price or construction cost of the home may not exceed \$75,500 or the FHA maximum insurance limit for the area. The refinancing of an existing home loan is not permitted.

### **Home Buyers Cash Assistance Program (initiated in May 1991)**

This program provides cash assistance to close a loan for home buyers having an income of no more than \$23,000. Funds may be used for up to 50 percent of the minimum cash required to close a loan (maximum advance of \$1,000), and these funds are combined with 6 $\frac{7}{8}$  percent, 30-year mortgage money. Purchase price of the home may not exceed \$50,000. Since its inception, the program has provided permanent financing of \$4,917,213 for 138 homes. In addition to permanent financing, the program provided \$119,778 in cash assistance with closing costs. Average household income for this program was \$17,209.

### **203(k) Rehabilitation Home Mortgage Program (initiated in March 1992)**

The Board of Housing set aside \$5 million to provide a firm secondary market for the acquisition and rehabilitation of an existing dwelling not meeting minimum FHA standards. The home is to be owner-occupied with limited business use of the property. The purchaser is to be a first-time homebuyer except for certain targeted areas. This program is conducted in conjunction with the Department of Housing and Urban Development. The maximum loan amount is \$60,000 and family income may not exceed \$30,000. The refinancing of an existing home loan is not permitted. The board has purchased two loans for \$100,750.

### **Montana Manufactured Housing Program (initiated in September 1992)**

The Board of Housing set aside \$4.5 million to finance single family manufactured housing installed on a permanent foundation on titled (owned) property. Lot cost, well, and septic can be included in the loan. These are 30-year loans with a 7¾ percent fixed rate of interest for first-time homebuyers or single parents (a separated or divorced person that was co-owner of a house) with annual household income at or below \$25,000. The home is to be owner-occupied with not investor involvement. The lot cannot exceed five acres. The maximum mortgage amount is \$65,000.

### **Low-income Housing Preservation and Resident Homeownership Program (Title VI)**

The Low-income Housing Preservation and Homeownership Program was authorized in Title VI of the National Affordable Housing Act of 1990. The program provides competitive grants to assure the continuation of Section 221(d)(3) and Section 236 projects, whose low-income use restrictions could otherwise expire after 20 years of the final mortgage endorsement. The grants are financial incentives to retain project-subsidized housing projects, and to encourage sales to purchasers who will keep the property for low-income persons. Resident corporations, owners of low-income housing, nonprofit organization, state or local agencies, or any entity that agrees to maintain low-income affordability restrictions may apply for funding.

*Contact person: Richard Fox, Office of Housing, HUD-Denver Regional Office (303) 844-5351.*

### **HOPE 1 (Public Housing Homeownership) Program**

The HOPE 1 Program is to assist in providing affordable homeownership for residents of public and Indian housing. HOPE 1 funds are available in three forms: planning grants and implementation grants. Eligible activities for planning grants include:

- replacement housing;
- development of resident councils;
- counseling;
- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

The maximum planning grant amount is \$200,000, and it does not require matching funds. Mini planning grants are available.

With implementation grants, a grantee can fund

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities; and
- administrative and operating costs.

Implementation grants support the cost of developing the housing. There is no cap on overall grant amounts, but some eligible activities are capped. This type of grant requires non-federal matching funds. Both grant types are awarded on a competitive basis.

Resident management corporations, resident corporations, cooperative associations, public or nonprofit organizations, public bodies or agencies, Public Housing Authorities, and Indian Housing Authorities are eligible to apply for HOPE 1 grants.

*Contact person: HUD-Denver, Office of Public Housing (303) 844-4762.*

## **HOPE 2 (Homeownership of Multifamily Units) Program (Title IV)**

The HOPE 2 program was authorized in subtitle B of Title IV of the National Affordable Housing Act of 1990. Program funds are to be used to assist in developing homeownership opportunities for low-income persons by providing planning and implementation grants to organizations that will help families purchase and maintain units in multifamily projects. The projects must be owned by the government, FHA-distressed, or subject to mortgages that are insured or held by HUD. Resident councils, resident management corporations, cooperative associations, mutual housing associations, public or private nonprofit organizations, public housing agencies and Indian housing authorities are eligible to apply. Joint applications may be submitted. Grants are awarded competitively. Planning grants can be no more than \$200,000, while mini planning grants may be only \$100,000. They can be used for:

- development of resident councils;
- counseling;
- training and technical assistance;
- underwriting feasibility studies;
- preliminary architectural work; and
- development of security plans.

Implementation grants must be matched with non-federal funds that are at least 33 percent of the grant amount. The maximum implementation grant is based on the present published Section 8 Existing Fair Market Rents over a 10-year period. These grants can fund:

- rehabilitation;
- replacement reserves;
- legal fees;
- relocation;
- economic development activities;

- administrative and operating costs; and
- acquisition.

*Contact person: Lois Tressler, Office of Housing, HUD-Denver Regional Office (303) 844-4959.*

### **HOPE 3 (Homeownership of Single Family Homes) Program**

HOPE 3 provides financial assistance for homeownership. Planning grants may be used for feasibility studies, technical assistance for grant recipients, researching the availability of properties, preparing applications for implementation grants, and program planning. HOPE 3 implementation grants may be used for the following:

- acquiring and rehabilitating property;
- assisting first-time home buyers in purchasing units;
- economic development to promote self-sufficiency of home buyers;
- administrative costs;
- replacement reserves; and
- home buyer outreach selection and counseling.

Eligible sources for housing are single family residential properties currently owned or held by HUD/FHA, VA, RTC, FDIC, DoD, GSA, DoT, FmHA, all other federal agencies, and state or local governments (including their agencies).

HOPE 3 eligible applicants include private nonprofit organizations, public agencies, cities, states, counties, and PHAs or IHAs in cooperation with a private nonprofit or cooperative association. Grants are awarded competitively: planning grants within a national pool, implementation grants in a regional pool. Planning grants cannot exceed \$100,000; implementation grants must be under \$3 million.

*Contact person: David Jacops, Office of Community Planning and Development, HUD-Denver (303) 844-5121.*

### **Energy Programs**

Energy program funds are available from the Department of Energy and other agencies. Allocations can be used for rehabilitation and new construction.

#### **A. Weatherization**

Energy costs are one of the greatest demands on a low-income family's resources. During Montana's winter, these costs can exceed rental or mortgage costs. The weatherization program administered by the Montana Family Assistance Bureau is 100 percent funded by the Department of Energy and Department of Health and Human Services. The program is designed to help low-income persons reduce their home heating costs and to conserve natural resources. The funds are directed toward local Human Resource Development Councils (HRDCs) and tribal organizations. These organizations decide where the grant money will be spent to install energy

saving measures in the homes of low-income persons. Homes are prioritized based on energy consumption.

Specific measures are decided upon after each home has had an energy audit to determine which activities would be most cost-effective. Measures include insulation, caulking, furnace repair and replacement. All labor and materials are purchased locally. By reducing overall costs, weatherization helps a family stay in their home, increasing family self-sufficiency. Income not spent on utility bills stays in the local economy, as does money spent on labor and materials.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

## **B. Low Income Energy Assistance Program (LIEAP)**

The Family Assistance Division's Low Income Energy Assistance Program (LIEAP) is 100 percent funded from the Department of Health and Human Services. The goal of this program is to assist low-income families in meeting the home heating costs. Funding for each household is determined using a series of matrix tables which factor the household's income, fuel type, size and type of home, and local heating degree days. Payments are made to the household's utility company. Supplemental payments are available for very low-income households. Emergency payments are allowed for unforeseen energy-related events. Up to 15 percent of the block grant may be used for weatherization activities to decrease long-term heating cost problems.

*Contact person: Jim Nolan, Family Assistance Division, Dept. of Social and Rehabilitative Services (406) 444-4546.*

The following three pages contain CHAS tables 3A and 3B, HOUSEHOLDS AND PERSONS ASSISTED WITH HOUSING and GOALS FOR HOUSEHOLDS TO BE ASSISTED WITH HOUSING, respectively. The tables are in support of the preceding narratives.

\* Or based on HUD adjusted income limits, if applicable.

## **B. OTHER ACTIONS**

### **i. PUBLIC POLICIES**

MDOC will continue to provide technical assistance to local government and other entities for the purpose of evaluating and qualifying for housing programs under its control and influence. Half of one staff person's time will continue to be committed to intergovernmental cooperation and application workshops. The application guidelines are designed to promote cooperation between various local entities, in order to overcome the sometimes fragmented areas of responsibility in housing programs.

The role of the State will expand in regard to the provision and interpretation of information that aids localities in determining and quantifying their housing needs, problems, and alternative solutions to those problems. The State also intends to continue supporting the grant and loan applications of other entities which expand the supply of housing and other related services. This support will encompass release of a data handbook and selected Montana Housing Survey tabulations.

Another creative approach to promoting affordable housing has surfaced. Many small localities are unable to raise enough funds to qualify for federal matching fund programs. The Montana Board of Investments (BOI) and MDOC intend to explore ways in which BOI can provide low interest loans to less advantaged communities for the purpose of providing revenues for federal matching fund programs.

The Community Development Bureau of MDOC received a grant to research model zoning standards. It is widely believed that local and some statewide land-use policies are making the provision of affordable housing more difficult than would otherwise be the case. By studying and inspecting alternatives to current Montana policies, the Community Development Bureau hopes to both encourage a broader dialogue regarding more equitable zoning practices and advise local entities on alternatives to these rules and regulations, thereby facilitating the provision of affordable housing.

The State will continue promoting and assisting non-profit organizations and other entities in applying for and receiving certification as Community Housing Development Organizations (CHDOs). This type of organization has the advantage of a 15 percent set-aside of HOME Program funds for qualifying CHDOs.

MDOC recognizes that one of the best ways of facilitating development of housing is through education and technical assistance. Many people perceive that the array of housing programs and regulations is too complex, or too foreign, to master. For example, FmHA housing rehabilitation money is seldom used because some people believe that the application process is restrictively cumbersome. MDOC is determined to expand its role as a provider of technical assistance, helping local jurisdictions to quantify their housing needs, qualify for various housing programs, and better understanding the requirements of various housing

programs. Assistance can be particularly helpful in exploring and determining with some precision the degree and type of local needs.

MDOC, through its Housing Assistance Bureau, has developed a housing program information clearinghouse. The bureau has a database of all housing programs relevant to Montana, whether administered by MDOC or other entities in the state. Other programs related to expanding housing opportunities, emergency shelters, homeless facilities, and other programs and services in support of housing are being researched and planned for inclusion with the data system.

## ii. INSTITUTIONAL STRUCTURE

Nearly all state-administered housing assistance programs are handled by the Department of Commerce (MDOC), primarily within the Board of Housing, the Community Development Bureau, and the Housing Assistance Bureau. As lead agency, the Housing Assistance Bureau will continue to develop the CHAS, to manage and coordinate its many related housing programs, and to promote the interaction and coordination of agencies and entities involved in providing affordable housing. To do this successfully, the MDOC established the Housing Assistance Bureau as the lead agency to carry the responsibility for development of future CHAS planning and the management and coordination of many housing programs.

Another avenue the State wishes to explore in greater detail is coordination with the private sector. Many banks, savings and loans, and other financial organization involved in housing are interested in taking advantage of federally assisted housing improvement programs in meeting requirements of the Federal Community Reinvestment Act (CRA). One federally assisted program is the Montana Community Development Block Grant (CDBG) Program, where local governments apply for grant funds in annual competition to fund housing projects involving the rehabilitation of homes owned or rented by low- or moderate-income families, along with activities to improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds can play a key role in leveraging. Following a plan such as this helps to create a pool of funds for rehabilitation loans at below market interest rates.

MDOC will continue communicating and coordinating activities with other agencies throughout the year. These actions assist in identification of areas for which further communication and cooperation may be needed and can help to identify gaps in the institutional provision of services. This has included application workshops for CDBG funding, information dissemination regarding the Community Reinvestment Act, advice to non-profit entities on how to become certified as a Community Housing Development Organizations (CHDO), and support for other entities in their application processes for funding of various programs.

The Housing Assistance Bureau will begin to explore methods that both state and local government can implement in support of affordable housing. For example, one idea to consider is the extent to which legal ability resides with the local government in the transfer of tax deed properties to non-profit entities for the purpose of promoting affordable housing. Other

questions may include the degree of stimulation in property tax revenues generated, and other pay back issues.

MDOC recognizes that housing policy and housing program responsibilities are often fragmented across a variety of agencies and organizational entities throughout both the state and federal government. To aid in resolving these complications, MDOC supports the established "team", comprised of other government and citizen participants, to aid in directing and solving housing problems facing the State. MDOC will support continuation of such an entity for the State's housing policy formation and the development of broader-based constituencies researching and analyzing housing problems facing the State.

The State has been able to collect some data pertaining to the size and needs of the non-homeless persons with special needs. However, much of it is general in nature, only. MDOC will be looking to the steering committee for input in the development and specification of goals in serving this in-need population. Furthermore, MDOC supports the prospective participation of individuals representing the interests of the developmentally disabled, correctional institutions, and other advocates representing non-homeless with special needs populations.

The Community Reinvestment Act (CRA) has stimulated the involvement of for-profit organizations in the provision of affordable housing. One example of CRA's work is the Community Home Ownership Program of Norwest Bank. Ten million dollars has been allocated by Norwest Banks in Montana and Wyoming to be used for home mortgage loans. The loans are available to people in Norwest Bank-designated market areas in Montana for purchasing single-family, owner-occupied residential units. The bank's program provides a low down payment, no discount points, low loan origination fees, and competitive interest rates on home mortgage loans. The loans are available only to families earning no more than 115 percent of the HUD-determined median income for the area, or \$30,000. These benefits help make home ownership possible for some low- and moderate-income Montanans.

### **iii. LOW INCOME HOUSING TAX CREDIT (LIHTC)**

The Low Income Housing Tax Credit (LIHTC) is available under Section 42 of the Internal Revenue Code of 1986. It was permanently authorized during FY 1993. The credit is a federal income tax credit for owners of qualifying rental housing which meets certain low-income occupancy and rent limitation requirements.

Except for certain buildings substantially financed with tax-exempt bonds, an owner must first obtain a credit allocation from the appropriate State agency before claiming the tax credit. The amount of tax credit which may be allocated annually for housing within each state is limited to \$1.25 per State resident. The Montana Board of Housing allocates the tax credit for housing located in the State.

The tax credit is available for residential rental buildings which are part of a qualifying low-income project. The rental units must be available to the general public. Residential

properties which were ineligible for the credit generally include transient housing (housing initially leased for less than six months), building of four units or less which are occupied by the owner or a relative of the owner, nursing homes, life care facilities, retirements homes providing significant service other than housing, dormitories, and trailer parks.

The tax credit is used in conjunction with the acquisition and substantial rehabilitation or construction of qualifying residential rental housing. Gross rent for each low-income unit cannot exceed 30 percent of the applicable income ceiling. Gross rent includes the rent paid by the tenant, including utility costs, but excludes Section 8 or other federal rent subsidies. If the tenant pays utilities directly, the minimum rent is reduced by a utility allowance.

The LIHTC Program facilitates the provision of affordable housing to the residents of Montana. Project selection criteria include serving low-income tenants, projects located in distressed or hard-to-develop areas, projects that meet the area's housing needs and priorities, projects serving tenant populations with special housing needs, and projects corresponding to areas with long assisted-housing waiting lists.

#### **iv. PUBLIC HOUSING RESIDENT INITIATIVES**

The State of Montana has no public housing directly under its control. Therefore, it has no Public Housing Resident Initiatives, or management discussion to offer. However, the State feels that conversion of public housing to owner-occupied housing is desirable, as long as the number of public housing units expands accordingly.

#### **v. LEAD-BASED PAINT HAZARD REDUCTION**

Montana programs related to control of lead-based paint hazards are in their infancy at the present time. The Montana Department of Health and Environmental Sciences (MDHES) has requested funds in the amount of \$340,928 from the Department of Health and Human Services Centers for Disease Control under the State and Community-Based Childhood Lead Poisoning Prevention Program. Funding for the program's first year has been secured. Funding for subsequent years is contingent upon the initial success of the program. The funds will be used for the Montana Childhood Lead Poisoning Prevention Program. This program will be initiated by the Butte-Silverbow Health Department, under contract to MDHES.

The Montana Childhood Lead Poisoning Prevention Program will entail the creation of local programs within the communities thought to have the highest at-risk population: Great Falls and Missoula. The program would eventually incorporate other major cities not served and access for rural areas through the urban program. Activities for the first year include the launching of a statewide education and outreach effort, organizing the program in these two cities, and demonstrating a rural outreach model, accessing areas of southwestern Montana through the existing program in Butte. The first six months would be spent in selecting and training community staffs and launching the education program in each area. Screening,

environmental assessments, and environmental and medical management would begin after the first six months.

Long-term funding for the program could be provided through a fee system for both screening and environmental assessment. The fees would begin in the second year of the program as the Butte program has shown fees to deter parents from having their children tested unless a definite need has been established. Other potential sources for funding are private and public community resources.

In addition to the Childhood Lead Poisoning Prevention Program, the Occupational and Radiological Health Bureau in the State Department of Health is in the early stages of creating a program to certify training courses for workers, supervisors, and inspectors of lead-based paint evaluation sites. They are currently studying the programs in place in other States and developing a funding proposal. By spring 1994, the EPA intends to have a set of regulations to guide the certification process for training courses.

#### **HIGH RISK AREAS**

The Butte Lead Program staff developed a process in order to identify areas of high risk for lead poisoning of children. Seven Montana cities were ranked according to these indicators:

- Percentage of children in the age group 0-5 assigned poverty status;<sup>47</sup>
- Total number of children in age group 0-6;
- Poverty rate; and
- Percentage of homes built prior to 1960.

A score of 1 indicated the highest risk, 7 the lowest. Great Falls and Missoula, the cities with the lowest scores, were identified as high risk areas. Butte also demonstrated a high risk but has a program already in place. Table 3.1 (below) presents the scores of each city.

Pre-1940 housing units, those most likely to contain lead-based paint, make up 17.1 percent of the total housing units in Montana. Of those units built before 1940, 25.4 percent are occupied by very low-income renters. Older rental units have higher rates of lead poisoning than do pre-1940 owner-occupied units. Of all renter households, about 58,010 are estimated to have lead-based paint. For owner-occupied households, 92,189 are estimated to have lead-based paint. This is not an indication of the number of households with a lead-based paint hazard; it is merely those most at risk. The findings of initial Superfund-related study by the Butte-Silverbow Health Department, when applied to the State, indicate that approximately 8,500 children may currently be at risk of lead poisoning.

---

<sup>47</sup> While the target age group is 0 to 6, data related to poverty status by age group is presented in five-year increments.

**TABLE 3.1**  
**DATA FOR IDENTIFYING HIGH RISK AREAS**

COMMUNITY	% CHILDREN 0-5 BELOW POVERTY	RANK	CHILDREN 0-6	RANK	POVERTY RATE	RANK	% HOUSES BUILT PRE-1960	RANK	TOTAL RANK
Billings	15.5%	6	8,459	1	12.7%	6	39%	6	19
Bozeman	23.3%	1	1,814	6	20.6%	1	42%	5	13
Butte	19.1%	4	3,227	4	15.0%	3	66%	1	12

Missoula	23.2%	2	3,994	3	17.5%	2	50%	4	11

#### OTHER CURRENT PROGRAMS

East Helena has a lead program which is relatively small, screening approximately 50 children annually in the East Helena area only. The program is funded by ASARCO and is part of the Lewis and Clark County Health Department.<sup>48</sup> Statistics relating to the East Helena Lead Program's blood screening activities are presented in Table 3.2 (below).

**TABLE 3.2**  
**LEWIS AND CLARK COUNTY**  
**OCTOBER 1991 THROUGH NOVEMBER 1992**  
(in  $\mu\text{g}/\text{dL}$ )

	<5	5-9	10-14	15-19	20 +
Results of Children Screened	11	7	6	-	-
Results of Children Monitored <sup>49</sup>	1	5	7	2	-

The Butte Childhood Lead Poisoning Prevention Program, mentioned above, is a comprehensive program funded by the Atlantic Richfield Corporation (ARCO). The Butte program began as a result of Superfund-related activities and is part of the Butte-Silver Bow County Health Department. The \$116,000 supplied annually by ARCO is used to support two full-time staff positions as well as screening activities, lab support, and environmental investigations. The Butte program has screened approximately 1,000 children in its first two years of operation. Under contract to MDHES, the Butte Lead Program coordinator and clinical technician have begun two days of preliminary statewide screening in each of 12 counties. The data from that sampling are presented in Table 3.3, below.

<sup>48</sup> The East Helena Lead Program began in conjunction with an overall environmental investigation associated with area smelting activities.

<sup>49</sup> Monitoring is to evaluate status of previously established elevated levels.

**TABLE 3.3**  
**BLOOD LEAD LEVELS IN CHILDREN**

Yellowstone County	19	20	1	0	0
<b>TOTAL</b>	<b>200</b>	<b>168</b>	<b>67</b>	<b>15</b>	<b>2</b>

The Butte program includes a Lead Levels Advisory Committee with representatives from county government, the private non-profit sector, the local university, physicians, and citizens. The model set up with this committee is intended to be used for the statewide program.

The community program began as a result of concerns about lead contaminants in the soil from mining and smelting activities in southwestern Montana. Initial findings of attempts to study the mining-lead contaminants issue in the Butte area have suggested that lead-based paint poses a far greater threat. Therefore, Butte's local program on lead poisoning prevention now focuses on housing-related lead hazards.

### C. ANTI-POVERTY STRATEGY

A major initiative the State plans for its anti-poverty strategy is the formation of a welfare reform task force to examine the design and operation of public assistance programs with a goal of examining and identifying the circumstance that result in people living in poverty and needing welfare assistance and exploring alternatives to the current programs through in depth review of welfare theories and reform efforts nationally. It will also develop a comprehensive reform proposal that will meet the basic needs of recipients and provide resources necessary to maximize each recipients's opportunity to achieve independence.

### D. COORDINATION EFFORTS

Many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the Federal Community Reinvestment Act (CRA). One of the federally assisted programs is the Montana CDBG Program, where local governments can apply for grant funds in annual competition to fund housing projects. Projects may involve rehabilitation of

<sup>50</sup> Blood lead levels were averaged for clients having multiple venipuncture specimens.

homes owned or rented by low- or moderate-income families, as well as activities that improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds play a key role in leveraging. This creates a pool of funds for rehabilitation loans at below market interest rates.

MDOC also has been communicating and coordinating activities with other agencies throughout the entire year. This assists in the identification of areas for which further communication and cooperation may be needed and helps to identify gaps in the institutional provision of services. Activities included application workshops for CDBG funding, information dissemination regarding the Community Reinvestment Act, advice to non-profit agencies and prospective non-profit entities on how to become certified as a Community Housing Development Organization (CHDO), and support for other entities in their application processes for the funding of various programs.<sup>51</sup>

---

<sup>51</sup>For example, the Community Development Bureau assisted the City of Kalispell in forming an alliance with the Federal Home Loan Bank of Seattle. The bureau's role was to emphasize the widespread strength that the program had throughout the state and MDOC.

## **E. CERTIFICATIONS**

### **FAIR HOUSING**

The State hereby certifies that it will affirmatively further fair housing.

Signature of Authorized Official

X\_\_\_\_\_

### **RELOCATION AND ANTIDISPLACEMENT**

The State hereby certifies that it has in effect and is following a residential antidisplacement and relocation assistance plan that, in the case of any such displacement in connection with any activity assisted with funds provided under the HOME Program, requires the same actions and provides the same rights as required and provided under section 104(d) of the Housing and Community Development Act of 1974 in the event of displacement in connection with a development project assisted under section 106 or 119 of such Act.

Signature of Authorized Official

X\_\_\_\_\_

## F. SUMMARY OF CITIZEN COMMENTS

Comments received during the public review process will be summarized and submitted to HUD.

## GLOSSARY

*Abatement* -- Any set of measures designed to permanently eliminate lead-based paint hazards in accordance with standards established by appropriate federal agencies. This may include removal of contaminated paint or dust, replacement of lead-contaminated surfaces or fixtures, the permanent containment or encapsulation of lead-contaminated paint, and the removal or covering of lead-contaminated soil. (Spring Training)

*Affordable Housing* (Section 215) -- The definition varies depending on the type of housing.

*Rental housing* -- Occupied by a low-income person ( $\leq 80\%$  of MI) and bears the lessor of the Section 8 Existing FMRs and 30 percent of adjusted income of a family whose income equals 65 percent of the MI. (This definition is the same as the HOME program's "High Home Rents.")

*Homeownership* -- Purchaser must be a low-income, first-time homebuyer, use home as a principle residence, and have a sales prices not exceeding the 203(b) limits. (The definition is the same as that used in the HOME program.)

*Existing owner rehabilitation* -- Existing owner must be low income, use home as principle residence, value after rehab may not exceed the 203(b) mortgage limits. (The definition is the same as that used in the HOME program.)

*AIDS or Related Diseases* -- The disease of acquired immunodeficiency syndrome or any conditions arising from the etiologic agent for AIDS including infection with the human immunodeficiency virus (HIV).

*Alcohol/Other Drug Abuse (AODA)* -- Excessive and impairing use of alcohol or other drugs, including addiction. AODA is measured by reports of a history of inpatient treatment, current symptomatology, current intake, and any combination of these.

*Assisted Household or Person* -- A household or person is assisted if, during the federal fiscal year, they receive benefits through the investment of federal funds (or federal funds used with other funds). The definition is broken down further:

*New tenant* -- The household or person takes occupancy of housing newly built, acquired, or rehabilitated, and/or receives rental assistance through new budget authority.

*Existing tenant* -- The acquisition and/or rehabilitation is completed during the year; a tenant receives rental assistance through new budget authority.

*Existing homeowner* -- The home's rehabilitation is completed during the year.

*First-time homebuyer* -- The home is purchased (e.g. loan is closed) during the year.

*Homeless person* -- The person becomes an occupant of transitional or permanent housing during the year.

*Non-homeless person with special needs* -- The person is considered assisted only if the provision of supportive services is linked to the acquisition, rehabilitation, or new construction of a housing unit and/or the provision of rental assistance during the year.

Households or persons who will benefit from more than one program activity must be counted only once. To be included in the goals, the housing unit must, at a minimum, satisfy the HUD Section 8 Housing Quality Standards (see 24 CFR section 882.109).

*Census Designated Place* -- Densely settled concentrations of population that are identifiable by name, but are not legally incorporated places. Three population size criteria are used to designate a CDP:

1. 1,000 or more persons if outside the boundaries of an urbanized area (UA);
2. 2,500 or more persons if inside the boundaries of a UA; and
3. 250 or more persons if outside the boundaries of a UA and within the official boundaries of an American Indian reservation.

*Committed* -- Generally means there has been a legally binding commitment of funds to a specific project to undertake specific activities.

*Consistent with the CHAS* -- A determination made by the state that a program application meets the following criteria: the Annual Plan for that fiscal year's funding indicates the state planned to apply for the program or was willing to support an application by another entity for the program; the location of activities is consistent with the geographic areas specified in the plan; and the activities benefit a category of residents for which the state's five-year strategy shows a priority.

*Cost Burden > 30 percent* -- The extent to which gross housing costs, including utility costs, exceed 30 percent of gross income, based on data published by the U.S. Census Bureau.

*Cost Burden > 50 percent (Severe Cost Burden)* -- The extent to which gross housing costs, including utility costs, exceed 50 percent of gross income, based on data published by the U.S. Census Bureau.

*Developmentally Disabled* -- Persons scoring at least two standard deviations below the mean on standardized intelligence tests are defined as developmentally disabled. (mean IQ = 70)

*Disabled Household* -- A household composed of one or more persons at least one of whom is an adult (a person of at least 18 years of age) who has a disability. A person shall be considered to have a disability if the person is determined to have a physical, mental, or emotional impairment that: (1) is expected to be of long-continued and indefinite duration, (2) substantially impedes his or her ability to live independently, and (3) is of such a nature that the ability could be improved by more suitable housing conditions. A person shall also be considered to have a disability if he or she has a developmental disability as defined in the Developmental Disabilities Assistance and Bill of Rights Act (42 U.S.C. 6001-6006). The term also includes the surviving member or members of any household described in the first sentence of this paragraph who were living in an assisted unit with the deceased member of the household at the time of his or her death.

*Economic Independence and Self-Sufficiency Programs* -- Programs undertaken by Public Housing Agencies (PHAs) to promote economic independence and self-sufficiency for participating families. Such programs may include Project Self-Sufficiency and Operation Bootstrap programs that originated under earlier Section 8 rental certificate and rental voucher initiatives, as well as the Family Self-Sufficiency program. In addition, PHAs may operate locally developed programs or conduct a variety of special projects designed to promote economic independence and self sufficiency.

*Elderly Household* -- For HUD rental programs, a one- or two-person household in which the head of the household or spouse is at least 62 years of age.

*Elderly Person* -- A person who is at least 62 years of age.

*Existing Homeowner* -- An owner-occupant of residential property who holds legal title to the property and who uses the property as his/her principal residence.

*Family* -- See definition in 24 CFR 812.2 (The National Affordable Housing Act definition required to be used in the CHAS rule differs from the Census definition). The Bureau of Census defines a family as a householder (head of household) and one or more other persons living in the same household who are related by birth, marriage or adoption. The term "household" is used in combination with the term "related" in the CHAS instructions, such as for Table 2, when compatibility with the census definition of family (for reports and data available from the census based upon that definition) is dictated. See also "Homeless Family."

*Family Self-Sufficiency (FSS) Program* -- A program enacted by Section 554 of the National Affordable Housing Act which directs Public Housing Agencies (PHAs) and Indian Housing Authorities (IHAs) to use Section 8 assistance under the rental certificate and rental voucher programs, together with public and private resources to provide supportive services, to enable participating families to achieve economic independence and self-sufficiency.

*Federal Preference for Admission* -- Preference given to otherwise eligible applicants under HUD's rental assistance programs who, at the time they seek housing assistance, are involuntarily displaced, living in substandard housing, or paying more than 50 percent of family income for rent. See, for example, 24 CFR 882.219.

*First-Time Home Buyer* -- An individual or family who has not owned a home during the three-year period preceding the HUD-assisted purchase of a home that must be used as the principal residence of the home buyer, except that any individual who is a displaced homemaker (as defined in 24 CFR 92) or a single parent (as defined in 24 CFR 92) may not be excluded from consideration as a first-time home buyer on the basis that the individual, while a homemaker or married, owned a home with his or her spouse or resided in a home owned by the spouse.

*FmHA* -- The Farmers Home Administration, or programs it administers.

*For Rent* -- Year-round housing units which are vacant and offered/available for rent. (U.S. census definition)

*For Sale* -- Year-round housing units which are vacant and offered/available for sale only. (U.S. census definition)

*Frail Elderly* -- An elderly person who is unable to perform at least three activities of daily living (i.e., eating, dressing, bathing, grooming, and household management activities). (See 24 CFR 889.105.)

*Group Quarters* -- Facilities providing living quarters that are not classified as housing units. (U.S. census definition). Includes prisons, nursing homes, dormitories, military barracks, and shelters.

*HOME* -- HOME Investment Partnerships Program, authorized by the National Affordable Housing Act, Title II.

*Homeless* -- Persons sleeping in shelters or in places not meant for human habitation.

*Homeless Family* -- Family that includes at least one parent or guardian and one child under the age of 18, a homeless pregnant woman, or a homeless person in the process of securing legal custody of a person under the age of 18 who is living in situations described by terms "sheltered" or "unsheltered."

*Homeless Individual* -- An unaccompanied youth (17 years or younger) or an adult (18 years or older) without children who is living in situations described by terms "sheltered" or "unsheltered."

*Homeless Youth* -- Unaccompanied person 17 years of age or younger who is living in situations described by terms "sheltered" or "unsheltered."

*HOPE 1* -- The HOPE for Public and Indian Housing Homeownership Program, authorized by Title IV, Subtitle A of the National Affordable Housing Act.

*HOPE 2* -- The HOPE for Homeownership of Multifamily Units Program, authorized by Title IV, Subtitle B of the National Affordable Housing Act.

*HOPE 3* -- The HOPE for Homeownership of Single Family Homes Program, authorized by Title IV, Subtitle C of the National Affordable Housing Act.

*Household* -- One or more persons occupying a housing unit (U.S. census definition). See also "Family."

*Housing Problems* -- Households that (1) occupy units meeting the definition of physical defects; (2) meet the definition of overcrowded; and (3) meet the definition of cost burden greater than 30 percent.

*Housing Unit* -- An occupied or vacant house, apartment, or a single room (SRO housing) that is intended as separate living quarters. (U.S. census definition)

*Institutions/Institutional* -- Group quarters for persons under care or custody. (U.S. census definition)

*Large Related* -- A household of five or more persons which includes at least one person related to the householder by blood, marriage or adoption.

*Lead-Based Paint* -- HUD thresholds or action levels for abating lead-based paint are one milligram per square centimeter (1 mg/cm<sup>2</sup>) or 0.5% by weight.

*Lead-Based Paint Hazard* -- Any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects as established by the appropriate federal agency. Lead-Based Paint Hazard Reduction Act of 1992 definition.

*LIHTC* -- (Federal) Low Income Housing Tax Credit.

*Low Income* -- Households whose incomes do not exceed 80 percent of the median income for the area, as determined by HUD, with adjustments for smaller and larger families. HUD may establish income ceilings higher or lower than 80 percent of the median for the area on the basis of HUD's findings that such variations are necessary because of prevailing levels of construction costs or fair market rents, or unusually high or low family incomes. NOTE: HUD income limits are updated annually and are available from local HUD offices. This term corresponds to low- and moderate-income households in the CDBG Program.

*Moderate Income* -- Households whose incomes are between 81 percent and 95 percent of the median income for the area, as determined by HUD, with adjustments for smaller or larger families. HUD may establish income ceilings higher or lower than 95 percent of the median for the area on the basis of HUD's findings that such variations are necessary because of prevailing levels of construction costs or fair market rents, or unusually high or low family incomes. This definition is different from that of the CDBG Program.

*Moderate physical problems* -- Plumbing. On at least three occasions during the last 3 months, or while the household was living in the unit if less than 3 months, all the flush toilets were broken down at the same time for 6 hours or more. Heating. Having unvented gas, oil, or kerosene heaters as the primary heating equipment. Upkeep. Having any three of these six upkeep problems: water leaks from the outside, such as from the roof, basement, windows or doors; leaks from inside structure such as pipes or plumbing fixtures; holes in the floors; holes or open cracks in the walls or ceilings; more than 8 inches of peeling paint or broken plaster; or signs of rats or mice in the last 90 days. Hallways. Having any three of these four hallway problems: no working light fixtures; loose or missing steps; loose or missing railings; and no elevator. Kitchen. Lacking a kitchen sink, refrigerator, or burners inside the structure for the exclusive use of the unit.

*Moderate Rehabilitation* -- Rehabilitation that involves costs that are less than or equal to 75 percent of the value of the building after rehabilitation. (Federal Register, July 20, 1992, pg. 32112, HOPWA)

*Non-Elderly Household* -- A household which does not meet the definition of "Elderly Household," as defined above.

*Non-Homeless Persons with Special Needs* -- Includes elderly, frail elderly, severe mental illness, developmentally disabled, physically disabled, persons with alcohol/drug addiction, persons with AIDS or related diseases, and families participating in organized programs to achieve economic self-sufficiency.

*Non-Institutional* -- Group quarters for persons not under care or custody. (U.S. census definition used)

*Occupied Housing Unit* -- A housing unit that is the usual place of residence of the occupant(s).

*Other Household* -- A household of one or more persons that does not meet the definition of a small related household, large related household, or elderly household.

*Other Income* -- Households whose incomes exceed 80 percent of the median income for the area, as determined by the secretary of HUD, with adjustments for smaller and larger families.

*Other Low-Income* -- Households whose incomes are between 51 percent and 80 percent of the median income for the area, as determined by HUD, with adjustments for smaller and larger families. HUD may establish income ceilings higher or lower than 80 percent of the median for the area on the basis of HUD's findings that such variations are necessary because of prevailing levels of construction costs or fair market rents, or unusually high or low family incomes. This term corresponds to moderate-income in the CDBG Program.

*Other Vacant* -- Vacant year-round housing units that are not for rent or for sale, including units awaiting occupancy or held.

*Overcrowded* -- A housing unit containing more than one person per room. (U.S. census definition)

*Owner* -- A household that owns the housing unit it occupies. (U.S. census definition)

*Physical Defects* -- A housing unit lacking complete kitchen or bathroom. (U.S. census definition)

*Physically Disabled* -- Persons with an illness or impairment which impedes his/her ability to function independently.

*Primary Housing Activity* -- A means of providing or producing affordable housing -- such as rental assistance, production, rehabilitation or acquisition -- that will be allocated significant resources and/or pursued intensively for addressing a particular housing need. See also "Secondary Housing Activity."

*Project-Based (Rental) Assistance* -- Rental assistance provided for a project, not for a specific tenant. Tenants receiving project-based rental assistance give up the right to that assistance upon moving from the project.

*Public Housing CIAP* -- Public Housing Comprehensive Improvement Assistance Program.

*Public Housing MROP* -- Public Housing Major Reconstruction of Obsolete Projects.

*Rehabilitation* -- The improvement or repair of an existing structure, or an addition to an existing structure that does not increase the floor area by more than 100 percent. (Federal Register, July 20, 1992, pg. 32112, HOPWA)

*Rent Burden > 30 percent (Cost Burden)* -- The extent to which gross rents, including utility costs, exceed 30 percent of gross income, based on data published by the U.S. Census Bureau.

*Rent Burden > 50 percent (Severe Cost Burden)* -- The extent to which gross rents, including utility costs, exceed 50 percent of gross income, based on data published by the U.S. Census Bureau.

*Rental Assistance* -- Rental assistance payments provided as either project-based rental assistance or tenant-based rental assistance.

*Renter* -- A household that rents the housing unit it occupies, including both units rented for cash and units occupied without cash payment of rent. (U.S. census definition)

*Renter-Occupied Unit* -- Any occupied housing unit that is not owner-occupied, including units rented for cash and those occupied without payment of cash rent.

*Rural Homelessness Grant Program* -- Rural Homeless Housing Assistance Program, which is authorized by Subtitle G, Title IV of the Stewart B. McKinney Homeless Assistance Act.

*Secondary Housing Activity* -- A means of providing or producing affordable housing--such as rental assistance, production, rehabilitation or acquisition -- that will receive fewer resources and less emphasis than primary housing activities for addressing a particular housing need. See also "Primary Housing Activity."

*Section 215* -- Section 215 of Title II of the National Affordable Housing Act: the section which contains the CHAS provisions. Section 215 defines "affordable" housing projects under the HOME Program. See "Affordable Housing."

*Service Needs* -- The particular services identified for special needs populations, which typically may include transportation, personal care, housekeeping, counseling, meals, case management, personal emergency response, and other services to prevent premature institutionalization and assist individuals to continue living independently.

*Severe Cost Burden* -- See Cost Burden > 50 percent.

*Severe Mental Illness* -- Includes the diagnoses of psychoses (e.g. schizophrenia) and the major affective disorders (e.g. bipolar, major depression). This does not include those diagnosed with organic disorders. It must be chronic, having existed for at least one year. SMI significantly limits a person's ability to live independently. This definition is different from that of the National Institute on Mental Health.

*Severe physical problems* -- Plumbing. Lacking hot or cold piped water or a flush toilet, or lacking both bathtub and shower, all inside the structure for the exclusive use of the unit. Heating. Having been uncomfortably cold last winter for 24 hours or more because the heating equipment broke down, and it broke down at least three times last winter for at least 6 hours each time. Electric. Having no electricity or all of the following three electric problems: exposed wiring; a room with no working wall outlet; and three blown fuses or tripped circuit breakers in the last 90 days. Upkeep. Having any five of the six maintenance problems listed above; Hallways. Having all of the four problems listed above in public areas.

*Sheltered* -- Families and persons whose primary nighttime residence is a supervised publicly or privately operated shelter, including emergency shelters, transitional housing for the homeless, domestic violence shelters, residential shelters for runaway and homeless youth, and any hotel/motel/apartment voucher arrangement paid because the person is homeless. This term does not include persons living doubled up or in overcrowded or substandard conventional housing. Any facility offering permanent housing is not a shelter, nor are its residents homeless.

*Shelters* -- Residences that do not provide the opportunity for continuous tenancy, including overnight facilities vacated each day, hotels and other places provided for a temporary stay using "vouchers" or "chits," transitional shelters (maximum stay is up to two years).

*Small Related* -- A household of two to four persons which includes at least one person related to the householder by birth, marriage, or adoption.

*Substandard Condition and not Suitable for Rehab* -- By local definition, dwelling units that are in such poor condition as to be neither structurally nor financially feasible for rehabilitation.

*Substandard Condition but Suitable for Rehab* -- By local definition, dwelling units that do not meet standard conditions but are both financially and structurally feasible for rehabilitation. This does not include units that require only cosmetic work, correction or minor livability problems, or maintenance work.

*Substantial Amendment* -- A major change in an approved housing strategy. It invokes a change to the five-year strategy, which may be occasioned by a decision to undertake activities or programs inconsistent with that strategy.

*Substantial Rehabilitation* -- Rehabilitation of residential property at an average cost for the project in excess of \$25,000 per dwelling unit; or rehabilitation that involves costs in excess of 75 percent of the value of the building after rehabilitation.<sup>52</sup>

*Supportive Housing* -- Housing, including housing units and group quarters, that have a supportive environment and includes a planned service component.

*Supportive Service Need in FSS Plan* -- The plan that PHAs administering a Family Self-Sufficiency program are required to develop to identify the services they will provide to participating families and the source of funding for those services. The supportive services may include child care; transportation; remedial education; education for completion of secondary or post-secondary schooling; job training, preparation and counseling; substance abuse treatment and counseling; training in homemaking and parenting skills; money management and household management; counseling in home ownership; job development and placement; follow-up assistance after job placement; and other appropriate services.

*Supportive Services* -- Services provided to residents of supportive housing for the purpose of facilitating the independence of residents. Some examples are case management, medical or psychological counseling and supervision, child care, transportation, and job training.

*Tenant-Based (Rental) Assistance* -- A form of rental assistance in which the assisted tenant may move from a dwelling unit with a right to continued assistance. The assistance is provided for the tenant, not for the project.

*Total Vacant Housing Units* -- Unoccupied year-round housing units. (U.S. census definition)

*Unsheltered* -- Families and individuals whose primary nighttime residence is a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings (e.g., streets, parks, alleys).

*Vacant Awaiting Occupancy or Held* -- Vacant year-round housing units that have been rented or sold and are currently awaiting occupancy, and vacant year-round housing units that are held by owners or renters for occasional use. (U.S. census definition)

*Vacant Housing Unit* -- Unoccupied year-round housing units that are available or intended for occupancy at any time during the year.

*Very Low Income* -- Households whose incomes do not exceed 50 percent of the median area income for the area, as determined by HUD, with adjustments for smaller and larger families and for areas with unusually high or low

---

<sup>52</sup> The first definition is from Appendix A of HUD's Instructions for developing and Completing a Five-Year CHAS. The second is from the *Federal Register*, July 20, 1992, pg. 32112, regulations for the Housing Opportunities for Persons with AIDS Program.

incomes or where needed because of prevailing levels of construction costs or fair market rents. This term corresponds to low-income households in the CDBG Program. For the purpose of further distinguishing needs within this category, two subgroups (0 to 30 percent and 31 to 50 percent of MFI) have been established in the CHAS tables and narratives.

*Worst-Case Needs* -- Unassisted, very low-income renter households who pay more than half of their income for rent, live in seriously substandard housing (which includes homeless people) or have been involuntarily displaced.

*Year-Round Housing Units* -- Occupied and vacant housing units intended for year-round use. (U.S. census definition.) Housing units for seasonal or migratory use are excluded.

**APPENDIX A**  
**MONTANA HOUSING SURVEY**  
**SURVEY INSTRUMENTS**

# MONTANA HOUSING SURVEY

INSTRUCTIONS: Please answer all the following questions. Place a "✓" or an "x" in the boxes that best represent your opinion or situation.

## PART 1 -- YOUR COMMUNITY'S HOUSING

For many of the following questions, we would like to know how many homes you think are available and how expensive these may be. We also want to know your opinion about whether these homes are in good physical shape (suitable for living) and whether they are usable, or "accessible," for handicapped persons. Please check only one box for each question.

1. The *availability* of rental housing in your community is

Plentiful . . . . . Very short  
1 1 ☐ 1 2 ☐ 1 3 ☐ 1 4 ☐ 1 5 ☐ 1 6 ☐ 1 7 ☐

2. The *affordability* of rental housing in your community is

Very expensive . . . . . Very underpriced  
2 1 ☐ 2 2 ☐ 2 3 ☐ 2 4 ☐ 2 5 ☐ 2 6 ☐ 2 7 ☐

3. The *accessibility* of rental housing for handicapped or disabled persons is

Very accessible . . . . . Not accessible  
3 1 ☐ 3 2 ☐ 3 3 ☐ 3 4 ☐ 3 5 ☐ 3 6 ☐ 3 7 ☐

4. The *suitability* of rental housing in your community is

Good shape . . . . . Poor shape  
4 1 ☐ 4 2 ☐ 4 3 ☐ 4 4 ☐ 4 5 ☐ 4 6 ☐ 4 7 ☐

5. The *availability* of for-sale owner-occupied housing in your community is

Plentiful! . . . . . Very short  
5 1 ☐ 5 2 ☐ 5 3 ☐ 5 4 ☐ 5 5 ☐ 5 6 ☐ 5 7 ☐

6. The *affordability* of owner-occupied housing in your community is

Very expensive . . . . . Very underpriced  
6 1 ☐ 6 2 ☐ 6 3 ☐ 6 4 ☐ 6 5 ☐ 6 6 ☐ 6 7 ☐

7. The *accessibility* of for sale owner-occupied housing for the handicapped or disabled is

Very accessible . . . . . Not accessible  
7 1 ☐ 7 2 ☐ 7 3 ☐ 7 4 ☐ 7 5 ☐ 7 6 ☐ 7 7 ☐

8. The *suitability* of owner-occupied housing in your community is

Good shape . . . . . Poor shape  
8 1 ☐ 8 2 ☐ 8 3 ☐ 8 4 ☐ 8 5 ☐ 8 6 ☐ 8 7 ☐

9. What major factors affect the ability of persons to buy homes in your area? 9 1 \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

10. Do you think building regulations adversely affect the *availability* of housing in your area?

10 1 ☐ Yes 10 2 ☐ No

10A. Do you think zoning regulations adversely affect the *availability* of housing in your area?

10A 1 ☐ Yes 10A 2 ☐ No

11. Do you think building regulations adversely affect the *affordability* of housing in your area?

11 1 ☐ Yes 11 2 ☐ No

11A. Do you think zoning regulations adversely affect the *affordability* of housing in your area?

11A 1 ☐ Yes 11A 2 ☐ No

12. What things might best facilitate solving your area's housing problems? 12 1 \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

## PART 2 -- HOUSING NEED IN YOUR AREA

Consider only your local community. Indicate how much need each of the following groups has for better housing.

1. Please indicate how much need each of the following groups have for better housing:

1A. Elderly (those over 65 years of age)

Severe need . . . . . No need

1A 1 ☐ 1A 2 ☐ 1A 3 ☐ 1A 4 ☐ 1A 5 ☐ 1A 6 ☐ 1A 7 ☐

1B. Mentally or Physically Disabled

Severe need . . . . . No need

1B 1 ☐ 1B 2 ☐ 1B 3 ☐ 1B 4 ☐ 1B 5 ☐ 1B 6 ☐ 1B 7 ☐

1C. Homeless

Severe need . . . . . No need

1C 1 ☐ 1C 2 ☐ 1C 3 ☐ 1C 4 ☐ 1C 5 ☐ 1C 6 ☐ 1C 7 ☐

1D. AIDS or HIV Infected

Severe need . . . . . No need

1D 1 ☐ 1D 2 ☐ 1D 3 ☐ 1D 4 ☐ 1D 5 ☐ 1D 6 ☐ 1D 7 ☐

1E. Alcohol or Drug Addicted

Severe need . . . . . No need

1E 1 ☐ 1E 2 ☐ 1E 3 ☐ 1E 4 ☐ 1E 5 ☐ 1E 6 ☐ 1E 7 ☐

1F. Please identify other groups in need of housing in your area. 1F 1 \_\_\_\_\_  
\_\_\_\_\_

2. Please indicate how much each of these types of housing programs are needed:

2A. Repair and maintenance assistance

Extreme need . . . . . No need

2A 1 ☐ 2A 2 ☐ 2A 3 ☐ 2A 4 ☐ 2A 5 ☐ 2A 6 ☐ 2A 7 ☐

2B. Rental assistance

Extreme need . . . . . No need

2B 1 ☐ 2B 2 ☐ 2B 3 ☐ 2B 4 ☐ 2B 5 ☐ 2B 6 ☐ 2B 7 ☐

2C. Construction of low-rent rental units  
 Extreme need . . . . . No need  
 2C 1 ☐ 2C 2 ☐ 2C 3 ☐ 2C 4 ☐ 2C 5 ☐ 2C 6 ☐ 2C 7 ☐

2D. Rehabilitation of rental units  
 Extreme need . . . . . No need  
 2D 1 ☐ 2D 2 ☐ 2D 3 ☐ 2D 4 ☐ 2D 5 ☐ 2D 6 ☐ 2D 7 ☐

2E. Construction of affordable new single family units  
 Extreme need . . . . . No need  
 2E 1 ☐ 2E 2 ☐ 2E 3 ☐ 2E 4 ☐ 2E 5 ☐ 2E 6 ☐ 2E 7 ☐

2F. Rehabilitation of single family units  
 Extreme need . . . . . No need  
 2F 1 ☐ 2F 2 ☐ 2F 3 ☐ 2F 4 ☐ 2F 5 ☐ 2F 6 ☐ 2F 7 ☐

2G. Low-rent group care for elderly  
 Extreme need . . . . . No need  
 2G 1 ☐ 2G 2 ☐ 2G 3 ☐ 2G 4 ☐ 2G 5 ☐ 2G 6 ☐ 2G 7 ☐

2H. Assistance for manufactured home and mobile home owners  
 Extreme need . . . . . No need  
 2H 1 ☐ 2H 2 ☐ 2H 3 ☐ 2H 4 ☐ 2H 5 ☐ 2H 6 ☐ 2H 7 ☐

3. Do you feel that your area attracts persons in need of housing?  
 3 1 ☐ Yes 3 2 ☐ No

3A. If yes, which one of the following is the largest group attracted to your area?  
 3A 1 ☐ Elderly  
 3A 2 ☐ Mentally or physically disabled  
 3A 3 ☐ Homeless  
 3A 4 ☐ AIDS or HIV infected persons  
 3A 5 ☐ Alcohol or drug addicted  
 3A 6 ☐ Other \_\_\_\_\_

### PART 3 -- YOUR HOME

Please indicate if *your* dwelling unit has any of the following housing problems. Check one box for each structural characteristic, corresponding to the severity of the problem.

1. Inadequate plumbing  
 No problems . . . . . Many leaks  
 1 1 ☐ 1 2 ☐ 1 3 ☐ 1 4 ☐ 1 5 ☐ 1 6 ☐ 1 7 ☐

2. Inadequate wiring  
 No problems . . . . . Bare wires  
 2 1 ☐ 2 2 ☐ 2 3 ☐ 2 4 ☐ 2 5 ☐ 2 6 ☐ 2 7 ☐

3. Soot or smoke escaping into the home from fireplace or heater  
 No problems . . . . . Much soot/smoke  
 3 1 ☐ 3 2 ☐ 3 3 ☐ 3 4 ☐ 3 5 ☐ 3 6 ☐ 3 7 ☐

4. Walls or ceiling with holes, falling plaster, peeling paint  
 No problems . . . . . Severe problem  
 4 1 ☐ 4 2 ☐ 4 3 ☐ 4 4 ☐ 4 5 ☐ 4 6 ☐ 4 7 ☐

5. Missing window panes or cardboard/plastic instead of glass  
 No problems . . . . . Panes missing  
 5 1 ☐ 5 2 ☐ 5 3 ☐ 5 4 ☐ 5 5 ☐ 5 6 ☐ 5 7 ☐

11. Do you own, rent, or have other arrangements for your home?  
 11 1 ☐ Own 11 2 ☐ Rent 11 3 ☐ Other

12. Which of the following best describes your current residence?  
 12 1 ☐ Single family home  
 12 2 ☐ Duplex, triplex, or 4-plex  
 12 3 ☐ Multifamily unit (more than 4 units in structure, e.g. apartment complex)  
 12 4 ☐ Manufactured or mobile home  
 12 5 ☐ Other type of home \_\_\_\_\_

13. How many years have you lived in this residence? 13 1 \_\_\_\_\_

6. Doors or windows that stick or don't open  
 No problems . . . . . Many stuck  
 6 1 ☐ 6 2 ☐ 6 3 ☐ 6 4 ☐ 6 5 ☐ 6 6 ☐ 6 7 ☐

7. Air leaks around windows or doors  
 No problems . . . . . Many leaks  
 7 1 ☐ 7 2 ☐ 7 3 ☐ 7 4 ☐ 7 5 ☐ 7 6 ☐ 7 7 ☐

8. Roof sags, missing shingles, leaks  
 No problems . . . . . Severe leaks  
 8 1 ☐ 8 2 ☐ 8 3 ☐ 8 4 ☐ 8 5 ☐ 8 6 ☐ 8 7 ☐

9. Cracked foundation  
 No problems . . . . . Many or large cracks  
 9 1 ☐ 9 2 ☐ 9 3 ☐ 9 4 ☐ 9 5 ☐ 9 6 ☐ 9 7 ☐

10. Please comment on any problems with your house that are not listed above. 10 1 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

14. When was your dwelling built? 14 1 \_\_\_\_\_

15. How many bedrooms does your residence have?  
 15 1 ☐ 0/studio 15 2 ☐ 1 15 3 ☐ 2  
 15 4 ☐ 3 15 5 ☐ 4 15 6 ☐ 5 or more

16. How many full bathrooms does your residence have?  
 16 1 ☐ 0 16 2 ☐ 1 16 3 ☐ 2 16 4 ☐ 3 or more

16A. How many half bathrooms does your residence have?  
 16A 1 ☐ 0 16A 2 ☐ 1 16A 3 ☐ 2 16A 4 ☐ 3 or more

17. How many people live in your household?  
 17 1 \_\_\_\_\_

18. Are there persons under the age of 18 in your household? 18 1 ☐ Yes 18 2 ☐ No

18A. If yes, how many? 18A 1 \_\_\_\_\_

#### PART 4 -- YOUR HOUSEHOLD

1. Which of the following categories best describes your current occupation? (Please select only one.)

- 1 01 ☐ Administrative/Office  
1 02 ☐ Accounting  
1 03 ☐ Retail Trade  
1 04 ☐ Restaurant/Food Svcs.  
1 05 ☐ Law/Legal Services  
1 06 ☐ Phys./Natural Science  
1 07 ☐ Farming/Ranching  
1 08 ☐ Business Services

- 1 09 ☐ Engineering  
1 10 ☐ Welder/Metal Fab.  
1 11 ☐ Construction  
1 12 ☐ Truck Driver/Transp.  
1 13 ☐ Mechanic/Auto Repair  
1 14 ☐ Electrician/Plumber  
1 15 ☐ Finance/Insur/Real Est  
1 16 ☐ Manufacturing

- 1 17 ☐ Medical Professional  
1 18 ☐ Schoolteacher  
1 19 ☐ Personal Services  
1 20 ☐ Heavy Equip Operator  
1 21 ☐ Mining  
1 22 ☐ General Laborer  
1 23 ☐ Geology  
1 24 ☐ Other \_\_\_\_\_

2. Are you currently employed in this occupation? 2 1 ☐ Yes 2 2 ☐ No

3. How long have you been in this occupation?

3 1 \_\_\_\_\_

4. If you rent, can you afford to buy a home?

4 1 ☐ Yes 4 2 ☐ No

5. If you are a homeowner, is it difficult for you to maintain your home?

5 1 ☐ Yes 5 2 ☐ No

5A. If yes, why?

- 5A 1 ☐ Don't know what to do  
5A 2 ☐ Too expensive  
5A 3 ☐ Need helper to do the maintenance  
5A 4 ☐ Other \_\_\_\_\_

6. What is the sex of the head of household?

6 1 ☐ Male 6 2 ☐ Female

6B. If you are not the head of household, what is your sex? 6B 1 ☐ Male 6B 2 ☐ Female

7. What is the age of the head of household?

7 1 \_\_\_\_\_

7B. If you are not the head of household, what is your age? 7B 1 \_\_\_\_\_

8. What is your present marital status?

- 8 1 ☐ Married 8 2 ☐ Separated 8 3 ☐ Divorced  
8 4 ☐ Widowed 8 5 ☐ Never Married

9. What is the race of the head of household?

- 9 1 ☐ White 9 3 ☐ Native American  
9 2 ☐ Black 9 4 ☐ Asian/Pacific Islander  
9 5 ☐ Other (specify) \_\_\_\_\_

10. What is the ethnic or cultural background of head of household (hispanic, Jewish, etc.)?

10 1 \_\_\_\_\_

11. Have you experienced unfair treatment related to housing (been denied or discouraged from a unit based on race, sex, family status etc.) within the last three years?

11 1 ☐ Yes 11 2 ☐ No

12. What is your level of education?

- 12 1 ☐ Completed high school  
12 2 ☐ Some college  
12 3 ☐ Completed college  
12 4 ☐ Some graduate work  
12 5 ☐ Graduate degree  
12 8 ☐ None of the above

13. What is the monthly rent or mortgage payment for your home?

- 13 1 ☐ \$0 to \$99 13 7 ☐ \$600 to \$699  
13 2 ☐ \$100 to \$199 13 8 ☐ \$700 to \$799  
13 3 ☐ \$200 to \$299 13 9 ☐ \$800 to \$899  
13 4 ☐ \$300 to \$399 13 10 ☐ \$900 to \$999  
13 5 ☐ \$400 to \$499 13 11 ☐ \$1,000 or more  
13 8 ☐ \$500 to \$599

14. Does your rent payment include utilities?

14 1 ☐ Yes 14 2 ☐ No

15. Does anyone in your household have a self care or mobility limitation? 15 1 ☐ Yes 15 2 ☐ No

15A. If yes, what is the degree of the limitation?

Minor problem . . . . . Major problem

15A 1 ☐ 15A 2 ☐ 15A 3 ☐ 15A 4 ☐ 15A 6 ☐ 15A 8 ☐ 15A 7 ☐

16. If you would like a summary of the survey results, please check here.

16 1 ☐ Yes, I would like a summary.

16A. If you answered yes and your current address is different from the one printed on the cover letter, what is your current address:

16A 1 \_\_\_\_\_

17. What is your annual household income?

- 17 1 ☐ Less than \$5,000  
17 2 ☐ \$5,000 to \$9,999  
17 3 ☐ \$10,000 to \$12,499  
17 4 ☐ \$12,500 to \$14,999  
17 5 ☐ \$15,000 to \$17,499  
17 6 ☐ \$17,500 to \$19,999  
17 7 ☐ \$20,000 to \$22,499  
17 8 ☐ \$22,500 to \$24,999

- 17 9 ☐ \$25,000 to \$27,499  
17 10 ☐ \$27,500 to \$29,999  
17 11 ☐ \$30,000 to \$32,499  
17 12 ☐ \$32,500 to \$34,999  
17 13 ☐ \$35,000 to \$37,499  
17 14 ☐ \$37,500 to \$39,999  
17 15 ☐ \$40,000 to \$42,499  
17 16 ☐ \$42,500 to \$44,999

- 17 17 ☐ \$45,000 to \$47,499  
17 18 ☐ \$47,500 to \$49,999  
17 19 ☐ \$50,000 to \$54,999  
17 20 ☐ \$55,000 to \$59,999  
17 21 ☐ \$60,000 to \$74,999  
17 22 ☐ \$75,000 to \$99,999  
17 23 ☐ \$100,000 or more

# SURVEY OF MONTANA'S HOUSING NEEDS

INSTRUCTIONS: Please answer all the following questions. Place a "✓" or an "x" in the boxes that best represent your opinion or situation. Use the back of these pages to make additional comments.

1. Which of the following best describes your current occupation? (Please select only one.)

2. How many years of experience do you have in the occupation you indicated above? 2 1 \_\_\_\_\_

3. To what geographic area (or areas) of the state do your occupational responsibilities take you?

- 3 1 ☐ NE      3 2 ☐ SE      3 3 ☐ Central      3 4 ☐ NW      3 5 ☐ SW

4. What constituency do you represent or are you most familiar with? 4 1 \_\_\_\_\_

## YOUR AREA'S HOUSING STOCK

5. Which value best represents the current rental housing vacancy rate in your area?

- 5 1 ☐ 10% +    5 2 ☐ 9%    5 3 ☐ 8%    5 4 ☐ 7%    5 5 ☐ 6%  
 5 6 ☐ 5%    5 7 ☐ 4%    5 8 ☐ 3%    5 9 ☐ 2%    5 10 ☐ 1%

6. What do you think is the average monthly rental price (excluding utilities and services) for each of the following?

- efficiency unit    6 1 \_\_\_\_\_  
 1 bedroom apartment    6 2 \_\_\_\_\_  
 2 bedroom apartment    6 3 \_\_\_\_\_  
 3 bedroom apartment    6 4 \_\_\_\_\_  
 4 bedroom apartment    6 5 \_\_\_\_\_

7. What is the average percent increase or decrease in rental prices since July 1990?

- 7 1 \_\_\_\_\_ % increase  
 7 2 \_\_\_\_\_ % decrease

For questions 8 to 15, please check the one box that best represents your opinion for each question. Boxes on the left mean one extreme, boxes on the right mean the opposite extreme.

8. The *availability* of rental housing in your community is

- Plentiful . . . . . Very short  
 8 1 ☐    8 2 ☐    8 3 ☐    8 4 ☐    8 5 ☐    8 6 ☐    8 7 ☐

9. The *affordability* of rental housing in your community is

- Very expensive . . . . . Very underpriced  
 9 1 ☐    9 2 ☐    9 3 ☐    9 4 ☐    9 5 ☐    9 6 ☐    9 7 ☐

10. The *suitability* of rental housing in your community is

- Very suitable . . . . . Not suitable  
 10 1 ☐    10 2 ☐    10 3 ☐    10 4 ☐    10 5 ☐    10 6 ☐    10 7 ☐

11. The *accessibility* of rental housing in your area for handicapped persons is

- Very accessible . . . . . Not accessible  
 11 1 ☐    11 2 ☐    11 3 ☐    11 4 ☐    11 5 ☐    11 6 ☐    11 7 ☐

12. The *availability* of owner-occupied housing in your community is

- Plentiful . . . . . Very short  
 12 1 ☐    12 2 ☐    12 3 ☐    12 4 ☐    12 5 ☐    12 6 ☐    12 7 ☐

13. The *affordability* of owner-occupied housing in your community is

- Very expensive . . . . . Very underpriced  
 13 1 ☐    13 2 ☐    13 3 ☐    13 4 ☐    13 5 ☐    13 6 ☐    13 7 ☐

14. The *suitability* of owner-occupied housing in your community is

- Very suitable . . . . . Not suitable  
 14 1 ☐    14 2 ☐    14 3 ☐    14 4 ☐    14 5 ☐    14 6 ☐    14 7 ☐

15. The *accessibility* of owner-occupied housing for handicapped persons is

- Very accessible . . . . . Very inaccessible  
 15 1 ☐    15 2 ☐    15 3 ☐    15 4 ☐    15 5 ☐    15 6 ☐    15 7 ☐

16. What major factors affect the ability of persons to buy homes in your area? Continue on back if necessary. 16 1 \_\_\_\_\_

17. Do you think building and zoning regulations affect the availability of housing in your area?

- 17 1 ☐ Yes      17 2 ☐ No

17A. If yes, check the following if they apply:

- 17A 1 ☐ Increased energy efficiency codes  
 17A 2 ☐ Other (specify) \_\_\_\_\_

18. To what degree do the following factors affect the affordability or cost of housing?

18A. Building codes

- Decrease cost . . . . . Increase cost  
 18A 1 ☐    18A 2 ☐    18A 3 ☐    18A 4 ☐    18A 5 ☐    18A 6 ☐    18A 7 ☐

18B. Building energy efficiency codes

- Decrease cost . . . . . Increase cost  
 18B 1 ☐    18B 2 ☐    18B 3 ☐    18B 4 ☐    18B 5 ☐    18B 6 ☐    18B 7 ☐

**18C. Zoning regulations**

Decrease cost . . . . . Increase cost

18C 1 ☐ 18C 2 ☐ 18C 3 ☐ 18C 4 ☐ 18C 5 ☐ 18C 6 ☐ 18C 7 ☐

**18D. Financing affordable housing projects**

Decrease cost . . . . . Increase cost

18D 1 ☐ 18D 2 ☐ 18D 3 ☐ 18D 4 ☐ 18D 5 ☐ 18D 6 ☐ 18D 7 ☐

**18E. Saving for conventional loan down payments**

Decrease cost . . . . . Increase cost

18E 1 ☐ 18E 2 ☐ 18E 3 ☐ 18E 4 ☐ 18E 5 ☐ 18E 6 ☐ 18E 7 ☐

**19. What is the average percent increase or decrease in housing prices since July 1990?**

19 1 \_\_\_\_\_ % increase

19 2 \_\_\_\_\_ % decrease

**20. Do you feel that your area's population has changed significantly since spring 1990?**

20 1 ☐ Yes

20 2 ☐ No

**20A. If yes, what percent has it changed?**

20A 1 \_\_\_\_\_

**YOUR AREA'S HOUSING CHARACTERISTICS**

The next set of questions relate to your estimation of the needs that various groups have for housing.

**21. Please characterize the degree of need the following groups have for housing in your area; choose one box for each.**

**21A. Elderly**

Severe need . . . . . No need

21A 1 ☐ 21A 2 ☐ 21A 3 ☐ 21A 4 ☐ 21A 5 ☐ 21A 6 ☐ 21A 7 ☐

**21B. Mentally or Physically Disabled**

Severe need . . . . . No need

21B 1 ☐ 21B 2 ☐ 21B 3 ☐ 21B 4 ☐ 21B 5 ☐ 21B 6 ☐ 21B 7 ☐

**21C. Homeless**

Severe need . . . . . No need

21C 1 ☐ 21C 2 ☐ 21C 3 ☐ 21C 4 ☐ 21C 5 ☐ 21C 6 ☐ 21C 7 ☐

**21D. AIDS or HIV Infected Persons**

Severe need . . . . . No need

21D 1 ☐ 21D 2 ☐ 21D 3 ☐ 21D 4 ☐ 21D 5 ☐ 21D 6 ☐ 21D 7 ☐

**21E. Alcohol or Drug Addicted**

Severe need . . . . . No need

21E 1 ☐ 21E 2 ☐ 21E 3 ☐ 21E 4 ☐ 21E 5 ☐ 21E 6 ☐ 21E 7 ☐

**21F. Racial Minority**

Severe need . . . . . No need

21F 1 ☐ 21F 2 ☐ 21F 3 ☐ 21F 4 ☐ 21F 5 ☐ 21F 6 ☐ 21F 7 ☐

**21G. Please identify other prospective groups in your area who are in need of housing.** 21G \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**22. Given your in-need populations and housing stock, characterize your area's housing needs?**

Severe needs . . . . . No need

22 1 ☐ 22 2 ☐ 22 3 ☐ 22 4 ☐ 22 5 ☐ 22 6 ☐ 22 7 ☐

**23. Do you feel that your area is a magnet for those needing assisted living?**

23 1 ☐ Yes 23 2 ☐ No

**23A. If yes, how does that affect your community?**

Positive effect . . . . . Negative effect

23A 1 ☐ 23A 2 ☐ 23A 3 ☐ 23A 4 ☐ 23A 5 ☐ 23A 6 ☐ 23A 7 ☐

**24. Please rate the degree of need for each of the following:**

**24A. Rental assistance**

Extreme need . . . . . No need

24A 1 ☐ 24A 2 ☐ 24A 3 ☐ 24A 4 ☐ 24A 5 ☐ 24A 6 ☐ 24A 7 ☐

**24B. Production of new rental units**

Extreme need . . . . . No need

24B 1 ☐ 24B 2 ☐ 24B 3 ☐ 24B 4 ☐ 24B 5 ☐ 24B 6 ☐ 24B 7 ☐

**24C. Rehabilitation of old rental units**

Extreme need . . . . . No need

24C 1 ☐ 24C 2 ☐ 24C 3 ☐ 24C 4 ☐ 24C 5 ☐ 24C 6 ☐ 24C 7 ☐

**24D. Acquisition of existing rental units**

Extreme need . . . . . No need

24D 1 ☐ 24D 2 ☐ 24D 3 ☐ 24D 4 ☐ 24D 5 ☐ 24D 6 ☐ 24D 7 ☐

**25. How difficult is it to obtain financing for affordable housing projects?**

Very difficult . . . . . Very easy

25 1 ☐ 25 2 ☐ 25 3 ☐ 25 4 ☐ 25 5 ☐ 25 6 ☐ 25 7 ☐

**25B. If you feel that financing is difficult, to what do you attribute any problems?** 25B 1 \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**HOMELESS AND SUPPORTIVE HOUSING INVENTORY**

The following table relates to services and facilities for the homeless and for non-homeless persons with special needs. The first section, question 26, is further broken down into services and facilities which include an overnight stay, and those which do not include an overnight stay.

Question 27 asks for supportive housing with a service component for non-homeless persons with special needs. Please note that both questions ask for facilities and services, not the number of people that they help. Please provide what information you can.

**26. Facilities and Services for the Homeless and Threatened with Homelessness** Please remember, this is an inventory of services and facilities, not people. (check one box (□) for type of program)

### ADDITIONAL COMMENTS

The following questions ask for your opinions regarding general areas for policy formation. Please answer all that you wish. If you need additional space for your response, simply write on the back of these pages.

28. What opportunities for creating affordable housing in your area exist due to area market conditions?

29. What barriers for creating affordable housing in your area exist due to area market conditions?

30. What organizational or institutional barriers to affordable housing exist in your area?

31. What things might best facilitate solving your area's housing problems?

32. Are there gaps in the delivery of programs and resources in your area? If so, please describe them.

33. If you would like a copy of the survey results, please check the box below.

☐ Yes, I would like a summary of the results.

If your address is different from that presented on the cover letter, please enter your new address at right.

## APPENDIX B

### NPA FORECAST DOCUMENTATION

#### SOURCES AND METHODS OF PREPARATION OF THE 1992 REGIONAL ECONOMIC PROJECTIONS SERIES DATABASE

#### Content and Design of the Regional Economic Database

The 1992 *Regional Economic Projections Series*, (REPS™) includes historical estimates for 1967-1992 and annual projections for the years 1993-2015, prepared by the NPA Data Services.

There are a total of 9.3 million data points in the REPS regional economic database. The data content and arrangement of the economic database follows the layout of the database of the Regional Economic Measurement Division, Bureau of Economic Analysis (BEA) of the United States Department of Commerce, from which most of the underlying historical data for the period 1967-1991 were obtained. The data were further processed by the NPA Data Services, Inc., by filling in estimates for missing data cells, obtaining available data, and by developing benchmark estimates for 1992, and by converting all dollar amounts to constant 1987 dollars by means of the implicit deflator for Personal Consumption Expenditure. A list of the variables in the REPS economic database showing the relationships among them is given in Table B.1.

#### Geographic Units

There are a total of 3,659 United States geographic areas in the REPS database, including 3096 counties or county equivalents, 51 states and the District of Columbia, 319 Metropolitan Statistical Areas, 183 Economic Areas, 9 Census Regions, and the United States totals.

Where possible, county or county equivalent geographic definitions were used. However, in Virginia, special county definitions were necessary--combining counties and independent cities--and in six other states, county combinations were required involving, in most cases, recently created counties or equivalents for which sufficient historical data is not available to permit separate projections.

The Repts database includes 319 Metropolitan Statistical Areas (MSAs) reflecting the U.S. Office of Management and Budget definitions in effect in 1992, the base year of this projection.<sup>53</sup> The Appendix contains definitions of these MSAs in terms of their component counties listing their official FIPS (Federal Information Processing System) code numbers. Similar listings are provided in the Appendix for component counties of states and for component states of regions.

This database also includes 183 Economic Areas defined by the BEA. The Appendix in Volume 1 contains definitions of these areas in terms of their component counties.

---

<sup>53</sup> A set of new definitions which was issued in December 1992 is already scheduled for major revisions in July 1993. Most government statistical agencies, including the Bureau of Labor Statistics which originates MSA and county employment data, are following the MSA definitions which were in effect in 1992 and earlier years. This practice is followed also in this volume. The revised new definitions will be introduced in the 1993 *Regional Economic Projection Series* to be published early in 1994.

**TABLE B.1**  
Variables Included in the NPA Data Services, Inc., Economic Database

1. Total Employment (Total Employment By Type)	(Earnings of Employees and Proprietors By Sector:)
2. Proprietor Employment	27. Farm
3. Farm Proprietor	28. Nonfarm
4. Nonfarm Proprietor	29. Private Nonfarm
	30. Other (Agricultural Services, Forestry, Fisheries)
(Total Employment By Industry Sector:)	31. Mining
6. Farm	32. Construction
7. Nonfarm	33. Manufacturing
8. Private Nonfarm	34. Transportation, Communications and Public Utilities
	35. Wholesale Trade
9. Other (Agricultural Services, Forestry, Fisheries)	
10. Mining	36. Retail Trade
11. Construction	37. Finance, Insurance and Real Estate
12. Manufacturing	38. Services
13. Transportation, Communication and Public Utilities	39. Government
14. Wholesale Trade	
15. Retail Trade	40. Federal Civilian
16. Finance, Insurance and Real Estate	41. Federal Military
17. Services	42. State and Local
	43. Total Earnings of Employees and Proprietors, All Industries
18. Government	(Personal Income and Population:)
19. Federal Civilian	44. Personal Contributions to Social Insurance (S.I. contribution)(-)*
20. Federal Military	45. Earnings of Labor and Proprietors by Place of Work (excluding S.I. contribution)
21. State and Local	46. Residence Adjustment*
(Earnings of Employees and Proprietors By Type:)	47. Earnings of Labor and Proprietors by Place of Residence (excluding S.I. contribution)
22. Wages and Salaries*	48. Dividends, Interest and Rent*
23. Other Labor Income*	49. Transfer Payments to Person*
24. Proprietors Income*	50. Personal Income Per Capita
25. Farm Proprietors Income	51. Personal Income
26. Nonfarm Proprietors Income	52. Resident Population

\*Components of personal income of resident population. Personal contributions to social insurance are subtracted.

## Population

Total population in the 1992 regional economic and demographic databases include the results of the 1970, 1980 and 1990 Census of Population shifted to July 1, 1991 county population estimates by the Census Bureau; and July 1, 1992, county estimates by the NPA Data Services, Inc., based on the 1992 Census reports of state population. The present database also reflects the revised July 1 county estimates of population for the years 1981-1989 and 1971-1979, released by the U.S. Bureau of the Census, for consistency with the 1970, 1980 and 1990 Census results. The population data for the Census years 1970, 1980 and 1990 has been re-based forward from the April count to July 1. Hence, the population figures in the REPS database for these years differ from the many published Census results by the amounts of population change between April and July. Population data is expressed in thousands of persons, carried with two additional decimal places.

## Employment

The employment concept used in the REPS economic database is job counts--measured in thousands of proprietors and wage and salary workers. For wage and salary workers the number of full-time and part-time employees are used with no attempt to convert to equivalents. Accordingly, a person with more than one job would be counted more than once. This employment series is greater than employment measured by the number of persons employed. Also, because of differences in coverage--in particular of the military (to include the National Guard and the active reserves), employees of households, students employed by state universities, and elected state and local government officials--the BEA employment totals for nonagricultural wage and salary workers differ from, and generally are larger than, the corresponding Bureau of Labor Statistics data.

The definition of proprietors currently in use by the BEA is based on the number of sole proprietors and partners (excluding partners in limited partnerships) as determined from the IRS income tax records. This concept yields a considerably higher estimate of the number of proprietors than the estimates derived from the household survey which counts only proprietors who report the conduct of their unincorporated businesses as their primary employment. In the present data set, the secondary self-employment jobs are treated symmetrically with the secondary wage and salary jobs; and the data for proprietors income and for the number of proprietors are derived from the same sources.

The national employment series is residence based. Thus, United States citizens residing and employed outside the country are not included. However, the regional employment series used here is based on place of work and not on place of residence; thus, a commuter living outside the center city county but working there would be counted as employed in the center city county.

The county data obtained from the BEA contains cells for both employment and earnings in private nonfarm wage and salary sectors that were withheld because of federal information disclosure rules. Estimates for the missing cells were filled in by the NPA Data Services, Inc. As a general procedure, the estimate for earnings was filled in first. The matching employment estimate was made after a ratio of earnings per worker in the category was established. In specific instances, to estimate the missing data for specific areas in an industry, the data for omitted years was interpolated from existing yearly data. If data for all years, or most years, for a given county in an industry were withheld, state distribution of the industry or distribution of other industries within the county were used to estimate the missing values. For example, if most of the yearly data for mining in a given county were withheld, the share of mining relative to total in the county for the years for which

earnings or employment in mining were reported would be used to estimate the missing years. If all the years were missing for mining employment in a given county, then the available data for the share of total county employment relative to state total was used as the starting point to estimate the missing county data.

The interpolated cells were then constrained to county employment totals and aggregated to economic area and state totals. The constraining procedure is nonreiterative with respect to the state totals. Thus, the state data for series with missing data may change with aggregation.

## Earnings

Earnings of 1-digit SIC industries are the sum of wage and salary income, other labor income, and of proprietor's income as defined by the National Income and Product Accounts (NIPA). The earnings figures are in thousands of 1987 dollars as deflated by NPA Data Services using the personal consumption expenditure deflator given in Table 4.3 for the years 1967-92. The Table also includes a projection of the deflator which is included here to help the users translate the constant dollar amounts projected in the *Regional Economic Projections Series* into actual dollar amounts likely to be current in future years.

As with the employment series, earnings are residence based nationally so that earnings of the United States citizens employed outside the United States are not included; and again, regionally, the earnings series are reported by place of work and not of residence.

## Personal Income

Personal income by type of income is also defined as in NIPA. The first four components (wages and salaries, labor income, and farm and nonfarm proprietor's income) sum to earnings. Dividends, interest, and rental income of persons are also included in personal income. However, personal contributions to social insurance are subtracted for the sum of the other parts of personal income in calculating personal income. Residence adjustment is the net amount of personal income earned in a geographic area that is earned by people not residing in the area. Thus, a negative residence adjustment for an area implies that workers commute into this area to earn income but do not reside there; similarly, a positive residence adjustment for an area implies that on the balance the area "exports" labor of its residents.

Personal income and its components are also in thousands of 1987 dollars as deflated by the personal consumption expenditure deflator shown in Table B.2. For count income data containing cells for private nonfarm earnings which were withheld because of federal information disclosure rules, the procedures used to estimate these cells were already described in discussion of the employment data. Estimates of missing employment and earnings data were made jointly in order to maintain consistency among them.

**TABLE B.3**  
**Personal Consumption Expenditure Deflator, 1967-2015**  
 (1987 = 0)

Actual		Projected Assuming Increases of 3.8% per Year	
1967	31.4	1993	128.5

### Economic Growth Assumptions

The U.S. economic growth assumptions underlying the *1992 Regional Economic Projections Series* are those contained in the *1992 National Economic Projections Series* (Volumes 2 and 3). These national projections of income and employment data series were linked to the corresponding 1991 national benchmarks given in the BEA state database issued in August 1992 which embody somewhat different measurement concepts and data preparation methods.

The current national economic projection is characterized by rising labor force participation rates, higher future birth rates and higher future rates of immigration than previously projected. Because of the aging of the U.S. population and exit of the baby boomers generation from the labor force, considerable long-term slow-down is projected after 2010 in the rates of growth of labor force and employment. Nevertheless, continued growth in labor force relative to population, a modest projected revival in the rates of capital formation, and a moderate acceleration of productivity growth will help maintain continued positive growth in earning and in personal income per capita though at somewhat slower rates than prevailed in the past.

The main economic variable in the *Regional Economic Projections Series* is real personal income. Movements in the real personal income closely parallel changes in Gross Domestic Product (GDP). The historical data for personal income were deflated by the personal consumption deflator series shown in Table 4.3. the projections were made in constant dollars. The historical and projected personal income of the 1992 REPS is shown in Table B.4, in 1987 prices for the years 1984-2015, together with the annual percentage changes in real personal income for these years.

The *National and Regional Economic Projections Series* are primarily concerned with the long term rates of growth, and their underlying analyses are primarily noncyclical. However, the actual data for the latest historical year always reflect specific current economic condition; and explicit assumptions are made for the next few years to connect the present conditions to long-term trends. During recessions and recovery stages of the business cycle, as is currently the case, specific assumptions are made for the next several years about cyclical changes which would return the economy to its long-term trends. The long-term trend is defined as the average of different stages of business cycles applicable to the projection period.

Based on the economic information available as of the end of April 1993, the 1990-91 recession has bottomed out in the second quarter of 1991, and a gradual recovery has continued through early 1993. The 1990-91 recession was comparatively short and mild. However, the recovery has been slow and halting, evidently as a result of continued reductions in defense employment and procurement.

The recent projected path of the economy, during the present business cycle, is summarized by the following number for the two principal indicators of cyclical economic conditions, the unemployment rate and the annual changes in GDP for 1988-1998:

**TABLE B.4**  
Real Personal Income, 1984-2015

<u>Year</u>	<u>Billions of 1987 Dollars</u>	<u>Percent Change From Previous Year</u>
1984	3461	6.8
1985	3563	3.0
1986	3666	2.9
1987	3754	2.4
1988	3895	3.8
1989	4013	3.0
1990	4066	1.3
1991	4024	-1.0
1992	4096	1.8
1993	4210	2.8
1994	4306	2.3
1995	4425	2.7
1996	4525	2.3
1997	4621	2.4
1998	4733	2.2
1999	4838	2.2
2000	4957	2.4
2001	5056	2.0
2002	5155	2.0
2003	5259	2.0
2004	5364	2.0
2005	5473	2.0
2006	5585	2.0
2007	5700	2.1
2008	5815	2.0
2009	5931	2.0
2010	6055	2.1
2011	6170	1.9
2012	6285	1.9
2013	6401	1.9
2014	6518	1.8
2015	6635	1.8

Source: 1984-92: Based on Bureau of Economic Analysis (BEA), U.S. Department of Commerce national data linked to the sum of county data for the United State reported in the September 1992 database of the Regional Economic Measurement Division of BEA.

1993-2015 projections: NPA Data Services, Inc.

	Civilian Unemployment Rate	GDP Change
1988	5.5%	3.9%
1989	5.3	2.5
1990	5.5	0.8
1991	6.6	-1.2
1992	7.4	2.1
1993	6.8	2.7
1994	6.2	2.9
1995	5.6	3.2
1996	5.4	2.6
1997	5.2	2.6
1998	5.1	2.4

During the early stages of cyclical expansions, the unemployment rate usually lags somewhat behind employment and the GDP as the number of entrants into the labor force increases cyclically and productivity rebounds.

After 1997, after the bulk of defense cuts are completed, the unemployment rate and the annual growth in GDP are projected to return to their respective long-term trends. After that year, further changes projected for the economy reflect mostly long-term structural factors.

### Methods of Projection

The basic method used to generate the regional economic projection in the present series can be described as a "regional growth accounting model" which disaggregates the national forecast into consistent subnational forecasts. The national forecasts of total population, employment by industry, earnings by industry, and personal income are generated by the economic growth model of the United States (Version 93.A) and related sectoral projection models.

The national projections of the variables in the economic database (Table 4.1) are first allocated to the economic areas and then to counties within these areas through a two-step regional disaggregation process utilizing relative growth rate differential and multiplier analyses. The resulting county estimates are then aggregated into state, regional, and metropolitan statistical area totals.

As a general procedure, the economic area forecast begins by projecting employment in each industry for each area based on area historical growth rate differentials from the U.S. growth rates. The growth differentials are derived for the base period defined by the endpoints between the average values of each series for 1969, 1971 and 1973 and their average values for 1989, 1990 and 1992. Average values of individual employment series for these two endpoints are used to calculate the differences between the national growth rate and the area growth rate for each of the employment sectors.

The calculated area growth rate differentials for each industry are assumed to decay over the projection horizon. A decay series of  $X^t$ ,  $X < 1.0$ , (where  $X$  is industry specific and is derived from historical experience, and  $t$  takes the values 1 through 23 for the projection years 1993 to 2015) was applied to each area's observed historical differential yielding an initial estimate of area projected

growth rate differentials. Adding these values to the projected national growth rates, multiplying by prior year employment, and constraining the area values to national controls yielded the final estimates of projected area employment. The multiplier effects of changes in other nonbasic industries is calculated in the process.

The current projection includes special local adjustments for closing and relocations of military bases and for changes in the military and civilian personnel employed in them and, also, for reductions in private employment by defense contractors in manufacturing and services resulting from the projected cuts in defense procurement.

The next stage in the projection process is population, which is assumed to follow total employment opportunities. The area specific ratios of employment to population in the base period reflect the long-term structural differences among areas in age composition of population in employment rates in labor force participation in the age structure of migration flows and in interarea commuter flows. The projected employment-population ratios of the individual economic areas are constrained to move in proportion to changes in the employment/population ratio projected for the United States.

Finally, personal income projections are developed by using a series of multiplied calculations. For each sector, earnings per job multiplied changes are calculated for the historical periods defined above. The national/area differentials are assumed to decay over the projection horizon; and the area earnings estimates are constrained to equal the national controls, yielding total labor and proprietor's earnings by area.

Estimates of total wages and salaries, other labor income, and contributions to social insurance are projected using a per job multiplier calculation. The non-earnings components of personal income (transfers and dividends, interest and rent) are projected using a per capita multiplier. Summing earnings by sector, subtracting personal contributions to social insurance, and adding the residence adjustment, transfers, and property incomes (dividends, interest, and rent) yields projected personal income. Dividing by area population yields per capita income.

## County Projections

In general, the projection methods developed for the economic area projections are also used for county level projections. In this case, however, economic areas act as the control areas, and the growth rate and multiplier differentials are calculated relative to the economic area growth rates.

Population is treated differently at the county level. In this case, growth rate differentials are used instead of multipliers. Thus, county level population share are not directly related to employment changes since intra-area commuting is common, and the residential patterns follow their own trends.

## DEMOGRAPHIC PROJECTION TECHNIQUE USED IN THE 1992 REGIONAL ECONOMIC PROJECTIONS SERIES

### Population

The 1992 REPS<sup>TM</sup> demographic projection completed in May 1993 was based on a projection of closed population at the economic area and at the county level of geographic detail and on

corresponding migration analyses. (The county definitions of Economic Areas are listed in the Appendix to Volume I of this Series.) The closed population was projection by the cohort component method which uses the appropriate age and race specific birth rates and age, sex, and race specific survival rates to project the natural increase (excluding migration) of population of each area. Total net migration was given as the difference between this "closed" population and an externally derived estimate of total "open" population obtained from the REPS economic model. Distribution of the total net migration by age, sex and race yields the final estimates of projected "open" population by age, sex, and race.

The estimating process was first applied at the Economic Area level, with the projected U.S. estimates acting as control values. The 1992 REPS demographic projections begin with the actual county population totals from the 1990 Census of Population shifted to July 1 base reflecting the MARS (modified age, race and sex) county population estimates for the 1990 Census released by the Census Bureau in February and March 1992, in the detailed estimates of county population for July 1 of the years 1981-1989 released in February 1992, and on estimates of July 1 county population for 1992 and 1992 based respectively on the county and the state population reports from the Bureau of the Census for these two dates.

In projecting closed population of each economic area for future years, a matrix of five-year birth rates by age and race of mother, based on the new (December 1992) Census Bureau estimates, is multiplied by the female population cohort estimates in the corresponding childbearing age groups, yielding give-year births totals by age and race of mother for the area. Multiplying these estimates by a sex ratio yields births by sex and race.

Next, the population in each five-year cohort is multiplied by age, sex and race specific five-year survival rates applicable to the area. This yields estimates of the "closed" population. Subtracting total closed population figures from the total "open" population estimates obtained from the REPS economic model yields an estimate of total implicit net migration for each area.

The historical migration data by age, race and sex for each area are then used to distribute the total net migration by these groups. The migration rates are adjusted to smooth out the sampling fluctuations, to reflect specific local population characteristics, such as the military population, and also for consistency with the observed changes in the distribution of population between 1980 and 1985 and between 1985 and 1990, given birth and survival rates for the area.

This projection process was applied to 1990, 1995, 2000, 2005, and 2010 yielding estimates for 1995, 2000, 2005, 2010 and 2015. Data for the intervening years (1991-1994, 1996-1999, 2001-2004, 2006-2009, 2011-2014) were calculated by interpolation between the 1990, 1995, 2000, 2005, 2010 and 2015 values. Estimates for 1991 were adjusted to conform to total July 1, 1991 population estimates for counties and for 1992 to the July 1, 1992, estimate of states released by the Census Bureau in December 1992.

The entire estimating process was the repeated at the county level of detail with the projected Economic Area estimates acting as control values for the county projections in the respective Economic Areas.

## Households

The number of households by county in the *1992 Regional Economic Projections Series* issued in May, 1993 contains historical estimates for the years 1967-92 and projections for the years 1993-2015. This current database reflects the official county household data from the 1990 Census of Population for April 1, 1990 and the county data from the 1980 Census of Population (both rebased to July 1). Estimates of county households for the years 1981-89 were derived from the intercensal county population estimates released by the Census Bureau in February 1992 by interpolation linearly the ratios of adult population to households between the two Census years and by conforming the result to relative annual changes reported for these years in the Current Population Reports. The estimates for 1991 and 1992, and projections for 1993-2015, were derived from independently projected ratios of adult county population to households for these years and conformed to an independently derived U.S. total projection of the number of households by year to 2015.
